IENC Feature Catalogue

Edition 2.5.1

2021-04-21

Introduction

The IENC Feature Catalogue is based on features, attributes and enumerations of following Data Dictionaries

Data Dictionary Name	Token	Owner	Place of Publishment
HYDRO Data Dictionary	HYDRO	IHO	http://registry.iho.int
IENC Data Dictionary	IENC	IEHG	http://registry.iho.int

Used Abbreviations

Feature Types		Feature Primitives	
G	Geo	Р	Point
M	Meta	L	Line
С	Cartographic	Α	Area
0	Collection	N	None
1	Information		

Use of Feature Attribute Bindings

O Optional Mandatory

C Conditional mandatory

<u>Type o</u>	of Attribute Use	<u>Type of</u>	Attribute Value
F	Feature	E	Enumeration
N	National	L	List
S	Spatial	F	Float
С	Cartographic	1	Integer

Feature	Accuracy of data		
Acronym:	M_ACCY	Code:	300
Туре:	M		
Primitive:	A		

DD Name: HYDRO Date accepted: 2000-11-01

Definition: An area within which the best estimate of the overall accuracy of the data is uniform. The overall accuracy

takes into account for example the source accuracy, chart scale, digitising accuracy, etc.

acronym	usage	constraints
POSACC	0	unit = "m" decimal digits = "2"

Feature	Beacon, cardinal		
Acronym:	BCNCAR	Code:	5
Туре:	G		
Primitive:	Р		

DD Name: HYDRO Date accepted: 2000-11-01

Definition: A beacon is a prominent, specially constructed object forming a conspicuous mark as a fixed aid to

navigation for use in hydrographic survey (IHO Dictionary, S-32, 5th Edition, 420). A cardinal beacon is used in conjunction with the compass to indicate where the mariner may find the best navigable water. It is placed in one of the four quadrants (North, East, South and West), bounded by inter-cardinal bearings from

the point marked. (UKHO NP 735, 5th Edition)

Feature	Beacon, special purpose/general		
Acronym:	BCNSPP	Code:	9
Туре:	G		
Primitive:	P		

DD Name: HYDRO Date accepted: 2000-11-01

Definition: A beacon, is a prominent specially constructed object forming a conspicuous mark as a fixed aid to

navigation or for use in hydrographic survey (IHO Dictionary, S-32, 5th Edition, 420). A special purpose beacon is primarily used to indicate an area or features, the nature of which is apparent from reference to a chart, Sailing Directions or Notices to Mariners. (UKHO NP 735, 5th Edition). Beacon in general: A

beacon whose appearance or purpose is not adequately known.

Feature	Traffic separation zone			
Acronym:	TSEZNE	Code:	150	
Туре:	G			
Primitive:	Α			

DD Name: HYDRO Date accepted: 2010-08-11

Definition: A traffic separation scheme is a scheme which aims to reduce the risk of collision in congested and/or

converging areas by separating traffic moving in opposite, or nearly opposite, directions. (IHO Dictionary, S-32, 5th Edition, 5585). A traffic separation zone is a zone separating the lanes in which ships are proceeding in opposite or nearly opposite directions; or separating traffic lanes designated for particular

classes of ships proceeding in the same direction (IMO Ships Routeing, 6th Edition).

Feature	Daymark		
Acronym:	daymar	Code:	17035
Туре:	G		
Primitive:	P		

DD Name: IENC Date accepted: 2009-09-11

Definition: The identifying characteristics of an aid to navigation which serve to facilitate its recognition against a

daylight viewing background. On those structures that do not by themselves present an adequate viewing area to be seen at the required distance, the aid is made more visible by affixing a daymark to the structure. A daymark so affixed has a distinctive colour and shape depending on the purpose of the aid.

Feature	Pipeline, overhead		
Acronym:	pipohd	Code:	17024
Туре:	G		
Primitive:	L		

DD Name: IENC Date accepted: 2001-05-31

Definition: A pipeline is a string of interconnected pipes used for the transport of matter, nowadays mainly oil or gas.

(IHO Dictionary, S-32, 5th Edition, 3857). An overhead pipeline is a pipeline supported by pylons and

passing over or nearby navigable waters.

Attribute Beacon shape

Acronym: BCNSHP

Code:

Use Type: F
Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: BCNSHP 1 Date accepted: 2000-11-01

Name: stake, pole, perch, post

Definition: an elongated wood or metal pole, embedded in the bottom to serve as a navigational aid or a

support for a navigational aid. (adapted from IHO Dictionary S-32, 5th Edition, 4960)

DD Name: HYDRO Code: BCNSHP_2 Date accepted: 2000-11-01

Name: withy

Definition: a tree without roots stuck or spoiled into the bottom of the sea to serve as a navigational aid.

3 DD Name: HYDRO Code: BCNSHP 3 Date accepted: 2000-11-01

Name: beacon tower

Definition: a solid structure of the order of 10 metres in height used as a navigational aid.

4 DD Name: HYDRO Code: BCNSHP_4 Date accepted: 2000-11-01

Name: lattice beacon

Definition: a structure consisting of strips of metal or wood crossed or interlaced to form a structure to

serve as an aid to navigation or as a support for an aid to navigation.

5 DD Name: HYDRO Code: BCNSHP_5 Date accepted: 2000-11-01

Name: pile beacon

Definition: a long heavy timber(s) or section(s) of steel, wood, concrete, etc., forced into the seabed to serve as an aid to navigation or as a support for an aid to navigation.(Adapted from IHO Dictionary, S-32, 5th Edition, 3840 and Navigation Dictionary, US National Oceanic and Atmospheric Administration - NOAA,

1969)

Value Data Dictionary (DD) Reference

6 DD Name: HYDRO Code: BCNSHP_6 Date accepted: 2000-11-01

Name: cairn

Definition: a mound of stones, usually conical or pyramidal, raised specifically for maritime navigation.

(adapted from IHO Dictionary, S-32, 5th Edition, 601).

7 DD Name: HYDRO Code: BCNSHP_7 Date accepted: 2000-11-01

Name: buoyant beacon

Definition: a tall spar-like beacon fitted with a permanently submerged buoyancy chamber, the lower end of the body is secured to seabed sinker either by a flexible joint or by a cable under tension. (IHO Specifications, M-4, 459.1)

4

Attribute Buoy shape

Acronym: **BOYSHP** Code:

Use Type:

Value Type: Ε

Data Dictionary (DD) Reference:

Date accepted: 2000-11-01 DD Name: HYDRO

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: BOYSHP 1 Date accepted: 2000-11-01

> Name: conical (nun, ogival)

Definition: the upper part of the body above the water-line, or the greater part of the superstructure, has

approximately the shape or the appearance of a pointed cone with the point upwards.

2 DD Name: HYDRO Code: BOYSHP 2 Date accepted: 2000-11-01

> can (cylindrical) Name:

Definition: the upper part of the body above the water-line, or the greater part of the superstructure, has

the shape of a cylinder, or a truncated cone that approximates to a cylinder, with a flat end uppermost.

3 DD Name: HYDRO Code: BOYSHP 3 Date accepted: 2000-11-01

> Name: spherical

Definition: the upper part of the body above the water-line, or the greater part of the superstructure, has

the shape of a part of a sphere.

4 DD Name: HYDRO Code: BOYSHP 4 Date accepted: 2000-11-01

> Name: pillar

Definition: the upper part of the body above the water-line, or the greater part of the superstructure is a

narrow vertical structure, pillar or lattice tower.

5 DD Name: HYDRO Code: BOYSHP 5 Date accepted: 2000-11-01

> Name: spar (spindle)

Definition: the upper part of the body above the water-line, or the greater part of the superstructure, has

the form of a pole, or of a very long cylinder, floating upright.

IENC FC 25 corr1.docx 216 Value Data Dictionary (DD) Reference

6 DD Name: HYDRO Code: BOYSHP_6 Date accepted: 2000-11-01

Name: barrel (tun)

Definition: the upper part of the body above the water-line, or the greater part of the superstructure, has

the form of a barrel or cylinder floating horizontally.

7 DD Name: HYDRO Code: BOYSHP_7 Date accepted: 2000-11-01

Name: super-buoy

Definition: a very large buoy, generally more than 5m in diameter

8 DD Name: HYDRO Code: BOYSHP_8 Date accepted: 2000-11-01

Name: ice buoy

Definition: a specially constructed shuttle shaped buoy which is used in ice conditions.

Attribute Buried depth

Acronym: BURDEP Code: 5

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The depth below the sea bed to which an object is buried.

Attribute Category of airport/airfield

Acronym: **CATAIR** Code: 7

Use Type: Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATAIR 1 Date accepted: 2000-11-01

> Name: military aeroplane airport

Definition: a large military airfield usually equipped with a control tower, hangars and accommodation for the receiving and discharging of passengers or cargo. (adapted from The Macquarie Dictionary, 1988)

2 DD Name: HYDRO Code: CATAIR 2 Date accepted: 2000-11-01

> Name: civil aeroplane airport

Definition: a large airfield usually equipped with a control tower, hangars and accommodation for the receiving and discharging of passengers or cargo. (The Macquarie Dictionary, 1988)

4 DD Name: HYDRO Code: CATAIR 4 Date accepted: 2000-11-01

> civil heliport Name:

Definition: a landing place for helicopters, often the roof of a building. (The Macquarie Dictionary, 1988)

6 DD Name: HYDRO Code: CATAIR 6 Date accepted: 2000-11-01

> Name: small planes airfield

Definition: an area of land set aside for the take-off and landing of small aeroplanes.

9

Attribute Category of bridge

Acronym: CATBRG

Code:

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATBRG 1 Date accepted: 2000-11-01

Name: fixed bridge

Definition: a bridge having permanent horizontal and vertical alignment. (McGraw-Hill Dictionary of

Scientific and Technical Terms, 3rd Edition, 1984)

3 DD Name: HYDRO Code: CATBRG_3 Date accepted: 2000-11-01

Name: swing bridge

Definition: a movable bridge (or span thereof) which rotates in a horizontal plane about a vertical pivot to allow the passage of vessels. (adapted from McGraw-Hill Encyclopaedia of Science and Technology, 7th

Edition, 1992)

4 DD Name: HYDRO Code: CATBRG 4 Date accepted: 2000-11-01

Name: lifting bridge

Definition: a movable bridge (or span thereof) which is capable of being lifted vertically to allow vessels to

pass beneath. (adapted from IHO Dictionary, S-32, 5th Edition, 547)

5 DD Name: HYDRO Code: CATBRG_5 Date accepted: 2000-11-01

Name: bascule bridge

Definition: a counterpoise bridge rotated in a vertical plane about an axis at one or both ends. Also called

a balance. (IHO Dictionary, S-32, 5th Edition, 545)

7 DD Name: HYDRO Code: CATBRG 7 Date accepted: 2000-11-01

Name: draw bridge

Definition: a general name for bridges of which part or the entire span of the bridge may be raised or

Value Data Dictionary (DD) Reference

drawn aside to allow ships to pass through. IHO Dictionary, S-32, 5th Edition, 546)

9 DD Name: HYDRO Code: CATBRG_9 Date accepted: 2000-11-01

Name: footbridge

Definition: a bridge structure used only for pedestrian traffic. (McGraw-Hill Dictionary of Scientific and

Technical Terms, 3rd Edition, 1984)

11 DD Name: HYDRO Code: CATBRG_11 Date accepted: 2000-11-01

Name: aqueduct

Definition: a bridge supporting an artificially elevated channel, for the conveyance of water. (adapted from

The New Shorter English Dictionary, 1993)

12 DD Name: HYDRO Code: CATBRG 12 Date accepted: 2000-11-01

Name: suspension bridge

Definition: a fixed bridge consisting of either a roadway or a truss suspended from two or more cables

which pass over towers and are anchored by backstays to a firm foundation. (McGraw-Hill Encyclopedia of

Science and Technology, 7th Edition, 1992)

13 DD Name: IENC Code: CATBRG 13 Date accepted: 2000-11-01

Name: bridge arch

Definition: an arched bridge with known clearances

Attribute Category of built-up area

Acronym: CATBUA Code: 10

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATBUA_1 Date accepted: 2000-11-01

Name: urban area

Definition: an area predominantly occupied by man-made structures used for residential, commercial, and

industrial purposes. (Nautical Chart Manual, US Department of Commerce, 1992)

DD Name: HYDRO Code: CATBUA_2 Date accepted: 2000-11-01

Name: settlement

Definition: a small collection of dwellings in a remote area.

DD Name: HYDRO Code: CATBUA_3 Date accepted: 2000-11-01

Name: village

Definition: a collection of houses in a rural district, usually smaller than a town.

4 DD Name: HYDRO Code: CATBUA_4 Date accepted: 2000-11-01

Name: town

Definition: any considerable collection of dwellings and other buildings larger than a village, but not

incorporated as a city.

5 DD Name: HYDRO Code: CATBUA 5 Date accepted: 2000-11-01

Name: city

Definition: a major town inhabited by a large permanent community with all essential services.

Attribute Category of cable

Acronym: CATCBL Code: 11

Use Type: F
Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATCBL_1 Date accepted: 2000-11-01

Name: power line

Definition: a cable used for the supply of electricity.

3 DD Name: HYDRO Code: CATCBL_3 Date accepted: 2000-11-01

Name: transmission line

Definition: multiple un-insulated cables usually supported by steel lattice towers. Such features are

generally more prominent than normal power lines.

4 DD Name: HYDRO Code: CATCBL_4 Date accepted: 2000-11-01

Name: telephone

Definition: a cable used for the transmission of telephone signals.

5 DD Name: HYDRO Code: CATCBL_5 Date accepted: 2000-11-01

Name: telegraph

Definition: a cable used for the transmission of telegraph signals.

6 DD Name: HYDRO Code: CATCBL 6 Date accepted: 2000-11-01

Name: mooring cable/chain

Definition: a cable or chain used to secure a mooring buoy or other floating structure.

Attribute Category of cardinal mark

Acronym: CATCAM Code: 13

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATCAM_1 Date accepted: 2000-11-01

Name: north cardinal mark

Definition: Quadrant bounded by the true bearing NW-NE taken from the point of interest it should be

passed to the north side of the mark.

2 DD Name: HYDRO Code: CATCAM_2 Date accepted: 2000-11-01

Name: east cardinal mark

Definition: Quadrant bounded by the true bearing NE-SE taken from the point of interest it should be

passed to the east side of the mark.

3 DD Name: HYDRO Code: CATCAM 3 Date accepted: 2000-11-01

Name: south cardinal mark

Definition: Quadrant bounded by the true bearing SE-SW taken from the point of interest it should be

passed to the south side of the mark.

4 DD Name: HYDRO Code: CATCAM_4 Date accepted: 2000-11-01

Name: west cardinal mark

Definition: Quadrant bounded by the true bearing SW-NW taken from the point of interest it should be

passed to the west side of the mark.

Attribute Category of coastline

Acronym: CATCOA Code: 15

Use Type: F
Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATCOA 1 Date accepted: 2000-11-01

Name: steep coast

Definition: a coast backed by rock or earth cliffs, gives a good radar return and is useful for visual identification from a considerable distance off, where cliffs alternate with low lying coast along the shoreline.

(IHO Chart Specifications, M-4)

DD Name: HYDRO Code: CATCOA_2 Date accepted: 2000-11-01

Name: flat coast

Definition: a level coast with no obvious topographic features.

3 DD Name: HYDRO Code: CATCOA 3 Date accepted: 2000-11-01

Name: sandy shore

Definition: a shoreline area made up of sand, i.e. loose material consisting of small but easily distinguishable, separate grains, between 0.0625 and 2.000 millimetres in diameter. (adapted from IHO

Dictionary, S-32, 5th Edition, 4497)

4 DD Name: HYDRO Code: CATCOA 4 Date accepted: 2000-11-01

Name: stony shore

Definition: a shoreline area made up of rock and rock fragments ranging in size from pebbles and gravel to

boulders or large rock masses. (adapted from IHO Dictionary, S-32, 5th Edition, 5059)

5 DD Name: HYDRO Code: CATCOA 5 Date accepted: 2000-11-01

Name: shingly shore

Definition: a shoreline area made up of rounded, often flat waterworn rock fragments larger than

Value Data Dictionary (DD) Reference
approximately 16 millimetres. (adapted from IHO Dictionary, S-32, 5th Edition, 4683)

DD Name: HYDRO Code: CATCOA 6 Date accepted: 2000-11-01

Name: glacier (seaward end)

Definition: projecting seaward extension of glacier, usually afloat. Also called glacier tongue. (IHO Hydrographic Dictionary, S-32, 5th Edition, 2043)

7 DD Name: HYDRO Code: CATCOA 7 Date accepted: 2000-11-01

Name: mangrove

Definition: one of several genera of tropical trees or shrubs which produce many prop roots and grow along low lying coasts into shallow water. (IHO Hydrographic Dictionary, S-32, 5th Edition, 3064)

8 DD Name: HYDRO Code: CATCOA 8 Date accepted: 2000-11-01

Name: marshy shore

Definition: a shoreline area made up of spongy land saturated with water. It may have a shallow covering of water, usually with a considerable amount of vegetation appearing above the surface. (adapted from IHO Dictionary, S-32, 5th Edition, 5240)

9 DD Name: HYDRO Code: CATCOA 9 Date accepted: 2000-11-01

Name: coral reef

Definition: a reef, often of large extent, composed chiefly of coral and its derivatives. (IHO Dictionary, S-32, 5th Edition, 1063)

52, 5th Edition, 1005)

10 DD Name: HYDRO Code: CATCOA 10 Date accepted: 2000-11-01

Name: ice coast

Definition: a vertical cliff forming the seaward edge of an ice shelf, ranging in height from 2m to 50m or more above sea level.

11 DD Name: HYDRO Code: CATCOA_11 Date accepted: 2000-11-01

Name: shelly shore

Definition: a shoreline area made up of shells i.e. made up of the hard outside covering of marine animals.

Attribute Category of conveyor

Acronym: CATCON Code: 17

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

2 DD Name: HYDRO Code: CATCON_2 Date accepted: 2000-11-01

Name: belt conveyor

Definition: a conveyor along which material or people are transported by means of a moving belt.

Attribute Category of coverage

Acronym: CATCOV Code: 18

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATCOV_1 Date accepted: 2000-11-01

Name: coverage available

Definition: continuous coverage of spatial objects is available within this area.

DD Name: HYDRO Code: CATCOV 2 Date accepted: 2000-11-01

Name: no coverage available

Definition: an area containing no spatial objects.

Attribute Category of crane

Acronym: CATCRN Code: 19

Use Type: F
Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

2 DD Name: HYDRO Code: CATCRN 2 Date accepted: 2000-11-01

Name: container crane/gantry

Definition: a high speed, shore-based crane used in the lift-on/lift-off operation of specially constructed containers. (adapted from Nautical Chart Manual, US Department of Commerce, Coast and Geodetic

Survey, 7th Edition)

3 DD Name: HYDRO Code: CATCRN_3 Date accepted: 2000-11-01

Name: sheerlegs

Definition: a tripodal structure used in dockyards and harbours for stepping masts or lifting loads in to and

out of vessels.

4 DD Name: HYDRO Code: CATCRN 4 Date accepted: 2000-11-01

Name: travelling crane

Definition: a crane mounted on rails (track) that can move (usually parallel to the wharf face) in order to

load and unload cargo vessels. (Canadian Hydrographic Service)

5 DD Name: HYDRO Code: CATCRN 5 Date accepted: 2000-11-01

Name: A-frame

Definition: a type of crane shaped like the letter "A". They are often positioned on river banks or the coastline and are used for lifting logs from logging trucks and depositing them in the water. (Canadian

Hydrographic Service)

Attribute Category of dam

Acronym: CATDAM Code: 20

Use Type: F
Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATDAM_1 Date accepted: 2000-11-01

Name: weir

Definition: a dam erected across a river to raise the level of the water. A fence of stakes set in a river or

along the shore as a trap for fish.

DD Name: HYDRO Code: CATDAM 2 Date accepted: 2000-11-01

Name: dam

Definition: a barrier to check or confine anything in motion; particularly one constructed to hold back water

and raise its level to form a reservoir, or to prevent flooding. (IHO Dictionary, S-32, 5th Edition, 1196)

3 DD Name: HYDRO Code: CATDAM 3 Date accepted: 2000-11-01

Name: flood barrage

Definition: an opening dam across a channel which, when required, is closed to control flood waters. (IHO

Chart Specifications, M-4 326.7)

Attribute Category of distance mark

Acronym: CATDIS Code: 21

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATDIS 1 Date accepted: 2000-11-01

Name: distance mark not physically installed

Definition: a point at which a distance from an origin along a feature is given for information, but at which

no specific marker exists.

DD Name: HYDRO Code: CATDIS_2 Date accepted: 2000-11-01

Name: visible mark, pole

Definition: a point at which a distance from an origin along a feature is given for information and which is

marked by a pole.

3 DD Name: HYDRO Code: CATDIS 3 Date accepted: 2000-11-01

Name: visible mark, board

Definition: a point at which a distance from an origin along a feature is given for information and which is

marked by a board.

4 DD Name: HYDRO Code: CATDIS_4 Date accepted: 2000-11-01

Name: visible mark, unknown shape

Definition: a point at which a distance from an origin along a feature is given for information and which is

physically marked, but the shape of the mark is not known or not given.

Attribute Category of dumping ground

Acronym: CATDPG Code: 23

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2010-09-08

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

2 DD Name: HYDRO Code: CATDPG 2 Date accepted: 2010-09-08

Name: chemical waste dumping ground

Definition: an area at sea where chemical waste is dumped.

4 DD Name: HYDRO Code: CATDPG 4 Date accepted: 2010-09-08

Name: explosives dumping ground

Definition: an area at sea where explosives are dumped.

5 DD Name: HYDRO Code: CATDPG_5 Date accepted: 2010-09-08

Name: spoil ground

Definition: an area at sea where dredged material is deposited. Also called dumping ground. (IHO

Dictionary, S-32, 5th Edition, 4930)

Attribute Category of fence/wall

Acronym: CATFNC Code: 24

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATFNC_1 Date accepted: 2000-11-01

Name: fence

Definition: a man made barrier used as an enclosure or boundary or for protection. (Digital Geographic

Information Working Group -DGIWG, Oct. 1987)

4 DD Name: HYDRO Code: CATFNC_4 Date accepted: 2000-11-01

Name: wall

Definition: a fence constructed from masonry or stone.

Attribute Category of ferry

Acronym: CATFRY Code: 25

Use Type: F
Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATFRY_1 Date accepted: 2000-11-01

Name: 'free-moving' ferry

Definition: a ferry which may have routes that vary with weather, tide and traffic. (adapted from M-4)

DD Name: HYDRO Code: CATFRY 2 Date accepted: 2000-11-01

Name: cable ferry

Definition: a ferry that follows a fixed route guided by a cable. (adapted from IHO Specifications, M-4)

Attribute Category of fishing facility

Acronym: CATFIF Code: 26

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: Category of fishing facility

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATFIF_1 Date accepted: 2000-11-01

Name: fishing stake

Definition: a pole or stake placed in shallow water to outline a fishing ground or to catch fish

DD Name: HYDRO Code: CATFIF_2 Date accepted: 2000-11-01

Name: fish trap

Definition: a structure (usually portable) for catching fish

3 DD Name: HYDRO Code: CATFIF_3 Date accepted: 2000-11-01

Name: fish weir

Definition: a fence of stakes or stones set in a river or along the shore to trap fish

4 DD Name: HYDRO Code: CATFIF_4 Date accepted: 2000-11-01

Name: tunny net

Definition: a net built at sea for catching tunny.

Attribute Category of fog signal

Acronym: CATFOG Code: 27

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference DD Name: HYDRO 1 Code: CATFOG 1 Date accepted: 2000-11-01 Name: explosive Definition: a signal produced by the firing of explosive charges. (Admiralty List of Lights and Fog Signals) 2 DD Name: HYDRO Code: CATFOG 2 Date accepted: 2000-11-01 Name: diaphone Definition: a diaphone uses compressed air and generally emits a powerful low-pitched sound, which often concludes with a brief sound of suddenly lowered pitch, termed the 'grunt'. (Admiralty List of Lights and Fog Signals) 3 DD Name: HYDRO Code: CATFOG 3 Date accepted: 2000-11-01 Name: siren Definition: a siren uses compressed air and exists in a variety of types which differ considerably in their sound and power. (Admiralty List of Lights and Fog Signals) 4 DD Name: HYDRO Code: CATFOG 4 Date accepted: 2000-11-01 Name: nautophone Definition: a horn having a diaphragm oscillated by electricity (IHO Dictionary, S-32, 5th Edition, 3371). 5 DD Name: HYDRO Code: CATFOG 5 Date accepted: 2000-11-01 Name: reed Definition: a reed uses compressed air and emits a weak, high pitched sound. (Admiralty List of Lights and Fog Signals)

Value Data Dictionary (DD) Reference 6 DD Name: HYDRO Code: CATFOG 6 Date accepted: 2000-11-01 Name: tyfon Definition: a diaphragm horn which operates under the influence of compressed air or steam (IHO Dictionary, S-32, 5th Edition, 5717). 7 Code: CATFOG 7 DD Name: HYDRO Date accepted: 2000-11-01 Name: bell Definition: a ringing sound with a short range. The apparatus may be operated automatically, by hand or by wave action. (IHO Chart Specifications, M-4, 452.5) 8 DD Name: HYDRO Code: CATFOG 8 Date accepted: 2000-11-01 Name: whistle Definition: a distinctive sound made by a jet of air passing through an orifice. The apparatus may be operated automatically, by hand or by air being forced up a tube by waves acting on a buoy. (IHO Chart Specifications, M-4, 452.6) 9 DD Name: HYDRO Code: CATFOG 9 Date accepted: 2000-11-01 Name: gong Definition: a sound produced by vibration of a disc when struck. The apparatus may be operated automatically, by hand or by wave action. (IHO Chart Specifications, M-4, 452.7) 10 DD Name: HYDRO Code: CATFOG 10 Date accepted: 2000-11-01 Name: horn

Definition: a horn uses compressed air or electricity to vibrate a diaphragm and exists in a variety of types which differ greatly in their sound and power. (Admiralty List of Lights and Fog Signals)

Attribute Category of fortified structure

Acronym: CATFOR Code: 28

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATOBS 1 Date accepted: 2000-11-01

> Name: snag/stump

Definition: a tree, branch or broken pile embedded in the ocean floor, river or lake bottom and not visible

on the surface, forming thereby a hazard to vessels. (IHO Dictionary, S-32, 5th Edition, 4794)

2 DD Name: HYDRO Date accepted: 2000-11-01 Code: CATOBS 2

> Name: wellhead

Definition: a submarine structure projecting some distance above the seabed and capping a temporarily

abandoned or suspended oil or gas well. (IHO Dictionary, S-32, 5th Edition, 5976)

3 DD Name: HYDRO Code: CATOBS 3 Date accepted: 2000-11-01

> Name: diffuser

Definition: a structure on an outfall through which liquids are discharged. The structure will usually project

above the level of the outfall and can be an obstruction to navigation.

4 DD Name: HYDRO Code: CATOBS 4 Date accepted: 2000-11-01

> Name: crib

Definition: a permanent structure set in the water, framed with wooden beams and filled with rocks or boulders. They are used to anchor log booms or support other constructions, e.g. submerged outfalls,

diffusers etc.. They may always be dry, submerged or cover and uncover.

5 DD Name: HYDRO Code: CATOBS 5 Date accepted: 2000-11-01

> Name: fish haven

Definition: areas established by private interests, usually sport fishermen, to simulate natural reefs and

IENC FC 25 corr1.docx 255 Value Data Dictionary (DD) Reference

wrecks that attract fish. The reefs are constructed by dumping assorted junk in areas which may be of very small extent or may stretch a considerable distance along a depth contour. Also called fishery reefs.

6 DD Name: HYDRO Code: CATOBS_6 Date accepted: 2000-11-01

Name: foul area

Definition: an area of numerous unidentified dangers to navigation. The area serves as a warning to the mariner that all dangers are not identified individually and that navigation through the area may be hazardous. Commonly used to encode areas behind danger lines on navigation charts. (adapted from IHO Dictionary, S-32, 5th Edition, 1915)

7 DD Name: HYDRO Code: CATOBS 7 Date accepted: 2000-11-01

Name: foul ground

Definition: areas over which it is safe to navigate but which should be avoided for anchoring, taking the ground or ground fishing. (IHO Chart Specifications, M-4, 442.8)

8 DD Name: HYDRO Code: CATOBS 8 Date accepted: 2000-11-01

Name: ice boom

Definition: floating barriers, anchored to the bottom, used to deflect the path of floating ice in order to prevent the obstruction of locks, intakes, etc., and to prevent damage to bridge piers and other structures. (Canadian Hydrographic Service, Chart specifications).

9 DD Name: HYDRO Code: CATOBS 9 Date accepted: 2000-11-01

Name: ground tackle

Definition: equipment such as anchors, concrete blocks, chains and cables, etc., used to position floating structures such as trot and mooring buoys etc.

10 DD Name: HYDRO Code: CATOBS_10 Date accepted: 2000-11-01

Name: boom

Definition: a floating barrier used to protect a river or harbour mouth or to create a sheltered area for storage purposes. (IHO Dictionary, S-32, 5th Edition, 505).

11 DD Name: HYDRO Code: CATOBS_11 Date accepted: 2011-02-23

Name: fishing net

Definition: a piece of open-meshed material made of twine, cord, or something similar, used for catching

fish

Attribute Category of offshore platform

Value	Data Dictionary (DD) Reference									
	Name:	strong current warning mark								
	Definition:	a mark warning of strong currents.								
33	DD Name:	HYDRO Code: CATSPM_33 Date accepted: 2000-11-01								
	Name:	berthing permitted mark								
	Definition:	a mark indicating that berthing is allowed.								
34	DD Name:	HYDRO Code: CATSPM_34 Date accepted: 2000-11-01								
	Name:	overhead power cable mark								
	Definition:	a mark indicating an overhead power cable.								
35	DD Name:	HYDRO Code: CATSPM_35 Date accepted: 2000-11-01								
	Name:	'channel edge gradient' mark								
	Definition:	a mark indicating the gradient of the slope of a dredge channel edge.								
36	DD Name:	HYDRO Code: CATSPM_36 Date accepted: 2000-11-01								
	Name:	telephone mark								
	Definition:	a mark indicating the presence of a telephone.								
37	DD Name:	HYDRO Code: CATSPM_37 Date accepted: 2000-11-01								
	Name:	ferry crossing mark								
	Definition: mark.	a mark indicating that a ferry route crosses the ship route; often used with a 'sound ship's siren'								
39	DD Name:	HYDRO Code: CATSPM_39 Date accepted: 2000-11-01								
	Name:	pipeline mark								
	Definition: the land.	a mark used to indicate the position of submarine pipelines or the point at which they run on to								
40	DD Name:	HYDRO Code: CATSPM_40 Date accepted: 2000-11-01								
	Name:	anchorage mark								
	Definition:	a mark indicating an anchorage area.								
41	DD Name:	HYDRO Code: CATSPM_41 Date accepted: 2000-11-01								
	Name:	clearing mark								
	Definition:	a mark used to indicate a clearing line.								
42	DD Name:	HYDRO Code: CATSPM_42 Date accepted: 2000-11-01								

Value	Data Dictionary (DD) Reference									
	Name:	ame: control mark								
	Definition:	a mark indicating the location at which a restriction or requirement exists.								
43	DD Name:	HYDRO Code: CATSPM_43 Date accepted: 2000-11-01								
	Name:	diving mark								
	Definition:	a mark indicating that diving may take place in the vicinity.								
44	DD Name:	HYDRO Code: CATSPM_44 Date accepted: 2000-11-01								
	Name:	refuge beacon								
	Definition:	a mark providing or indicating a place of safety.								
45	DD Name:	HYDRO Code: CATSPM_45 Date accepted: 2000-11-01								
	Name:	foul ground mark								
	Definition:	a mark indicating a foul ground.								
46	DD Name:	HYDRO Code: CATSPM_46 Date accepted: 2000-11-01								
	Name:	yachting mark								
	Definition:	a mark installed for use by yachtsmen.								
47	DD Name:	HYDRO Code: CATSPM_47 Date accepted: 2000-11-01								
	Name:	heliport mark								
	Definition:	a mark indicating an area where helicopters may land.								
48	DD Name:	HYDRO Code: CATSPM_48 Date accepted: 2000-11-01								
	Name:	GPS mark								
	Definition:	a mark indicating a location at which a GPS position has been accurately determined.								
49	DD Name:	HYDRO Code: CATSPM_49 Date accepted: 2000-11-01								
	Name:	seaplane landing mark								
	Definition:	a mark indicating an area where sea-planes land.								
50	DD Name:	HYDRO Code: CATSPM_50 Date accepted: 2000-11-01								
	Name:	entry prohibited mark								
	Definition:	a mark indicating that entry is prohibited.								
51	DD Name:	HYDRO Code: CATSPM_51 Date accepted: 2000-11-01								
	Name:	work in progress mark								
	Definition: a mark indicating that work (generally construction) is in progress.									

Value	Data Dictionary (DD) Reference									
52	DD Name:	HYDRO	Code:	CATSPM_52	Date accepted:	2000-11-01

Attribute Category of weed/kelp

Acronym: CATWED Code: 70

Use Type: F
Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: Category of week/kelp

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATWED_1 Date accepted: 2000-11-01

Name: kelp

Definition: a giant plant sometimes 60 metres long with no roots, it is anchored by hold-fasts or tendrils up to 10 metres long, that cling to rock. Gas filled bubbles on fronds act as floats keeping the kelp just below the surface. (Earth Sciences References, Mary McNeil)

2 DD Name: HYDRO Code: CATWED 2 Date accepted: 2000-11-01

Name: sea weed

 $\label{eq:definition:power} \textbf{Definition:} \quad \textbf{general name for marine plants of the algae class which grow in long narrow ribbons. Also \\$

called sea grass. (International Maritime Dictionary, 2nd Edition)

3 DD Name: HYDRO Code: CATWED_3 Date accepted: 2000-11-01

Name: sea grass

Definition: any grasslike marine alga. Eelgrass is one of the best known seagrasses. (IHO Dictionary, S-

32, 5th Edition, 4565)

4 DD Name: HYDRO Code: CATWED 4 Date accepted: 2000-11-01

Name: sargasso

Definition: a certain type of sea weed, or more generally, a large floating mass of this sea weed. (IHO

Dictionary, S-32, 5th Edition, 4501)

Attribute Category of wreck

Acronym: CATWRK Code: 71

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CATWRK_1 Date accepted: 2000-11-01

Name: non-dangerous wreck

Definition: a wreck which is not considered to be dangerous to surface navigation.

2 DD Name: HYDRO Code: CATWRK 2 Date accepted: 2000-11-01

Name: dangerous wreck

Definition: a wreck which is considered to be dangerous to surface navigation.

3 DD Name: HYDRO Code: CATWRK_3 Date accepted: 2000-11-01

Name: distributed remains of wreck

Definition: (foul ground) an area over which it is safe to navigate but which should be avoided for

anchoring, taking the ground or ground fishing. (IHO Chart Specifications, M-4)

4 DD Name: HYDRO Code: CATWRK_4 Date accepted: 2000-11-01

Name: wreck showing mast/masts

Definition: wreck of which only the mast(s) is visible at the sounding datum indicated.

5 DD Name: HYDRO Code: CATWRK 5 Date accepted: 2000-11-01

Name: wreck showing any portion of hull or superstructure

Definition: wreck of which any portion of the hull or superstructure is visible at the sounding datum

indicated.

Attribute Colour pattern

Acronym: COLPAT Code: 76

Use Type: F
Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: COLPAT_1 Date accepted: 2000-11-01

Name: horizontal stripes

Definition: straight bands or stripes of differing colours painted horizontally.

2 DD Name: HYDRO Code: COLPAT 2 Date accepted: 2000-11-01

Name: vertical stripes

Definition: straight bands or stripes of differing colours painted vertically.

3 DD Name: HYDRO Code: COLPAT_3 Date accepted: 2000-11-01

Name: diagonal stripes

Definition: straight bands or stripes of differing colours painted diagonally (ie not horizontally or vertically).

4 DD Name: HYDRO Code: COLPAT 4 Date accepted: 2000-11-01

Name: squared

Definition: often referred to as checker plate, where alternate colours are used to create squares similar to

a chess or draught board. The pattern may be straight or diagonal.

5 DD Name: HYDRO Code: COLPAT 5 Date accepted: 2000-11-01

Name: stripes (direction unknown)

Definition: straight bands or stripes of differing colours painted in an unknown direction.

6 DD Name: HYDRO Code: COLPAT 6 Date accepted: 2000-11-01

Name: border stripe

Value Data Dictionary (DD) Reference

Definition: a band or stripe of colour which is displayed around the outer edge of the object, which may also form a border to an inner pattern or plain colour.

Attribute Communication channel

Acronym: COMCHA Code: 77

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: A channel number assigned to a specific radio frequency, frequencies or frequency band.

Attribute Condition

Acronym: CONDTN Code: 81

Use Type: F
Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2010-11-16

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CONDTN_1 Date accepted: 2010-11-16

Name: under construction

Definition: a structure that is in the process of being built.

DD Name: HYDRO Code: CONDTN_2 Date accepted: 2010-11-16

Name: ruined

Definition: a structure in a decayed or deteriorated condition resulting from neglect or disuse, or a

damaged structure in need of repair. (IHO Dictionary, S-32, 5th Edition, 4456)

DD Name: HYDRO Code: CONDTN_3 Date accepted: 2010-11-16

Name: under reclamation

Definition: an area of the sea that is being reclaimed as land, usually by the dumping of earth and other

material.

4 DD Name: HYDRO Code: CONDTN_4 Date accepted: 2010-11-16

Name: wingless

Definition: a windmill or windmotor from which the turbine blades are missing.

5 DD Name: HYDRO Code: CONDTN 5 Date accepted: 2010-11-16

Name: planned construction

Definition: an area where a future construction is planned

Attribute Conspicuous, radar

Acronym: CONRAD Code: 82

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: CONVIS_1 Date accepted: 2000-11-01

Name: visually conspicuous

Definition: term applied to an object either natural or artificial which is distinctly and notably visible from

seaward. (IHO Dictionary, S-32, 5th Edition, 984)

2 DD Name: HYDRO Code: CONVIS_2 Date accepted: 2000-11-01

Name: not visually conspicuous

Definition: an object which is visible from seaward, but is not conspicuous.

Attribute Current velocity

Acronym: CURVEL Code: 84

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: Current velocity

Attribute Date end

Acronym: DATEND Code: 85

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The latest date on which an object (e.g., a buoy) will be present.

Attribute Date start

Acronym: DATSTA Code: 86

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The earliest date on which an object (e.g., a buoy) will be present.

Attribute Depth range value 1

Acronym: DRVAL1 Code: 87

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The minimum (shoalest) value of a depth range.

Attribute Depth range value 2

Acronym: DRVAL2 Code: 88

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The maximum (deepest) value of a depth range.

Attribute Elevation

Acronym: ELEVAT Code: 90

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The altitude of the ground level of an object, measured from a specified vertical datum.

Attribute Exhibition condition of light

Acronym: EXCLIT Code: 92

Use Type: F
Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: EXCLIT 1 Date accepted: 2000-11-01

Name: light shown without change of character

Definition: a light shown throughout the 24 hours without change of character. IHO Chart Specifications,

M-4

DD Name: HYDRO Code: EXCLIT_2 Date accepted: 2000-11-01

Name: daytime light

Definition: a light which is only exhibited by day.

3 DD Name: HYDRO Code: EXCLIT_3 Date accepted: 2000-11-01

Name: fog light

Definition: a light which is exhibited in fog or conditions of reduced visibility.

4 DD Name: HYDRO Code: EXCLIT_4 Date accepted: 2000-11-01

Name: night light

Definition: a light which is only exhibited at night.

Attribute Exposition of sounding

Acronym: **EXPSOU** Code: 93

Use Type: Value Type: Ε

Data Dictionary (DD) Reference:

Date accepted: 2010-08-12 DD Name: HYDRO

Definition: Indicates objects with a 'value of sounding' not within the range of depth of the surrounding depth area.

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: EXPSOU 1 Date accepted: 2010-08-12

> Name: within the range of depth of the surrounding depth area

Definition: the depth corresponds to the depth range of the surrounding depth area. i.e. the depth is not shoaler than the minimum depth of the surrounding depth area or deeper than the maximum depth of the surrounding depth area.

2 DD Name: HYDRO Code: EXPSOU 2

Date accepted: 2010-08-12

Name: shoaler than the range of depth of the surrounding depth area

Definition: the depth is shoaler than the minimum depth of the surrounding depth area.

3 DD Name: HYDRO Code: EXPSOU 3 Date accepted: 2010-08-12

> deeper than the range of depth of the surrounding depth area Name:

Definition: the depth is deeper than the maximum depth of the surrounding depth area.

Attribute Function

Acronym: FUNCTN Code: 94

Use Type: F

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: LITCHR_1 Date accepted: 2000-11-01

Name: fixed

Definition: a signal light that shows continuously, in any given direction, with constant luminous intensity

and colour. (IHO Dictionary, S-32, 5th Edition, 2780)

DD Name: HYDRO Code: LITCHR_2 Date accepted: 2000-11-01

Name: flashing

Definition: a rhythmic light in which the total duration of light in a period is clearly shorter than the total

duration of darkness and all the appearances of light are of equal duration. (IHO Dictionary, S-32, 5th

Edition, 2783)

3 DD Name: HYDRO Code: LITCHR 3 Date accepted: 2000-11-01

Name: long-flashing

Definition: a flashing light in which a single flash of not less than two seconds duration is regularly

repeated. (IHO Dictionary, S-32, 5th Edition, 2796)

4 DD Name: HYDRO Code: LITCHR 4 Date accepted: 2000-11-01

Name: quick-flashing

Definition: a light exhibiting without interruption very rapid regular alternations of light and darkness. (IHO

Dictionary, S-32, 5th Edition, 2803)

7 DD Name: HYDRO Code: LITCHR 7 Date accepted: 2000-11-01

Name: isophased

Definition: a light with all durations of light and darkness equal. (IHO Dictionary, S-32, 5th Edition, 2779)

	Definition:	constructed	from a p	olastic material strengt	hened with fibres	of glass.				
9	DD Name:	HYDRO	Code:	NATCON_9	Date accepted:	2000-11-01				
	Name:	painted								
	Definition: the application of paint to some other construction or natural feature.									

Attribute Nature of surface - qualifying terms

Acronym: NATQUA Code: 114

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: Nature of surface - qualifying terms

Enumerations:

Value Data Dictionary (DD) Reference 1 DD Name: HYDRO Code: NATQUA 1 Date accepted: 2000-11-01 Name: Fine Definition: falls within the smallest size continuum for a particular nature of surface term 2 DD Name: HYDRO Code: NATQUA 2 Date accepted: 2000-11-01 Name: Medium Definition: falls within the moderate size continuum for a particular nature of surface term 3 DD Name: HYDRO Code: NATQUA_3 Date accepted: 2000-11-01 Name: Coarse Definition: falls within the largest size continuum for a particular nature of surface term DD Name: HYDRO Code: NATQUA 4 Date accepted: 2000-11-01 4 Name: Broken Definition: fractured or in pieces

Attribute Object class definition

Acronym: CLSDEF Code: 18027

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2015-01-01

Definition: Specifies the defining characteristics of a 'new object'.

Attribute Object class name

Acronym: CLSNAM Code: 18028

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2015-01-01

Definition: Specifies the descriptive name of a 'new object' feature object class.

Attribute Object name

Acronym: OBJNAM Code: 116

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The individual name of an object.

Attribute Object name in national language

Acronym: NOBJNM Code: 301

Use Type: N
Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: Name of object in national language characters

Attribute Orientation

Acronym: ORIENT Code: 117

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The angular distance measured from true north to the major axis of the object. (Digital Geographic

Information Working Group -DGIWG, Oct.87)

Attribute Periodic date end

Acronym: PEREND Code: 118

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The end of the active period for a seasonal object (e.g. a buoy).

Attribute Periodic date start

Acronym: PERSTA Code: 119

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The start of the active period for a seasonal object (e.g. a buoy).

Attribute Pictorial representation

Acronym: PICREP Code: 120

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: Indicates whether a pictorial representation of the object is available.

Attribute Pilot district

Acronym: PILDST Code: 121

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The area within which a particular pilotage service operates.

Attribute Pilot district in national language

Acronym: NPLDST Code: 302

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: Pilot district (c...): string of national language characters

Attribute Positional Accuracy

Acronym: POSACC Code: 401

Use Type: F,S

Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The best estimate of the accuracy of a position. The expected input is the maximum of the two-dimensional

error. The error is assumed to be positive and negative. The plus/minus character shall not be encoded.

Attribute Product

Acronym: PRODCT Code: 123

Use Type: F
Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference 1 DD Name: HYDRO Code: PRODCT 1 Date accepted: 2000-11-01 Name: oil Definition: a thick, slippery liquid that will not dissolve in water, usually petroleum based in the context of storage tanks. (adapted from the Oxford Minidictionary, Third Edition) 2 DD Name: HYDRO Code: PRODCT 2 Date accepted: 2000-11-01 Name: gas Definition: a substance with particles that can move freely, usually a fuel substance in the context of storage tanks. (adapted from the Oxford Minidictionary, Third Edition) 3 DD Name: HYDRO Code: PRODCT 3 Date accepted: 2000-11-01 Name: water Definition: a colourless, odourless, tasteless liquid that is a compound of hydrogen and oxygen. (adapted from the Oxford Minidictionary, Third Edition) 4 DD Name: HYDRO Code: PRODCT 4 Date accepted: 2000-11-01 Name: stone Definition: a general term for rock fragments. (IHO Dictionary, S-32, 5th Edition, 5059) 5 DD Name: HYDRO Code: PRODCT 5 Date accepted: 2000-11-01 Name: coal Definition: a hard black mineral that is burned as fuel. (adapted from the Oxford Minidictionary, Third Edition)

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: QUASOU_1 Date accepted: 2000-11-01

Name: depth known

Definition: the depth from chart datum to the bottom is a known value.

2 DD Name: HYDRO Code: QUASOU 2 Date accepted: 2000-11-01

Name: depth unknown

Definition: the depth from chart datum to the bottom is unknown.

3 DD Name: HYDRO Code: QUASOU_3 Date accepted: 2000-11-01

Name: doubtful sounding

Definition: a depth that may be less than indicated. (adapted from IHO Dictionary, S-32, 5th Edition, 4840)

4 DD Name: HYDRO Code: QUASOU 4 Date accepted: 2000-11-01

Name: unreliable sounding

Definition: a depth that is considered to be an unreliable value.

6 DD Name: HYDRO Code: QUASOU 6 Date accepted: 2000-11-01

Name: least depth known

Definition: the shoalest depth over a feature is of known value. (adapted from IHO Dictionary, S-32, 5th

Edition, 2705)

7 DD Name: HYDRO Code: QUASOU 7 Date accepted: 2000-11-01

Name: least depth unknown, safe clearance at depth shown

Value Data Dictionary (DD) Reference

Definition: the least depth over a feature is unknown, but there is considered to be safe clearance at this

depth.

8 DD Name: HYDRO Code: QUASOU 8 Date accepted: 2000-11-01

Name: value reported (not surveyed)

Definition: depth value obtained from a report, but not fully surveyed.

9 DD Name: HYDRO Code: QUASOU_9 Date accepted: 2000-11-01

Name: value reported (not confirmed)

Definition: depth value obtained from a report, which it has not been possible to confirm.

10 DD Name: HYDRO Code: QUASOU_10 Date accepted: 2000-11-01

Name: maintained depth

Definition: the depth at which a channel is kept by human influence, usually by dredging. (IHO Dictionary,

S-32, 5th Edition, 3057)

11 DD Name: HYDRO Code: QUASOU_11 Date accepted: 2000-11-01

Name: not regularly maintained

Definition: depths may be altered by human influence, but will not be routinely maintained.

IENC FC 25 corr1.docx 358

Attribute Radar wave length

Acronym: RADWAL Code: 126

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The distance between two successive peaks (or other points of identical phase) on an electromagnetic

wave in the radar band of the electromagnetic spectrum.

Attribute Reference year for magnetic variation

Acronym: RYRMGV Code: 130

Use Type: F Value Type: I

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The reference calendar year for magnetic variation values.

Attribute Restriction

Acronym: RESTRN Code: 131

Use Type: F
Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The official legal statute of each kind of restricted area.

Enumerations:

Value

, ,

DD Name: HYDRO Code: RESTRN_1 Date accepted: 2000-11-01

Name: anchoring prohibited

Data Dictionary (DD) Reference

Definition: an area within which anchoring is not permitted.

DD Name: HYDRO Code: RESTRN_2 Date accepted: 2000-11-01

Name: anchoring restricted

Definition: a specified area designated by appropriate authority, within which anchoring is restricted in

accordance with certain specified conditions.

3 DD Name: HYDRO Code: RESTRN_3 Date accepted: 2000-11-01

Name: fishing prohibited

Definition: an area within which fishing is not permitted.

4 DD Name: HYDRO Code: RESTRN_4 Date accepted: 2000-11-01

Name: fishing restricted

Definition: a specified area designated by appropriate authority, within which fishing is restricted in

accordance with certain specified conditions.

5 DD Name: HYDRO Code: RESTRN_5 Date accepted: 2000-11-01

Name: trawling prohibited

Definition: an area within which trawling is not permitted.

6 DD Name: HYDRO Code: RESTRN_6 Date accepted: 2000-11-01

Value Data Dictionary (DD) Reference

Name: trawling restricted

Definition: a specified area designated by appropriate authority, within which trawling is restricted in

accordance with certain specified conditions.

7 DD Name: HYDRO Code: RESTRN 7 Date accepted: 2000-11-01

Name: entry prohibited

Definition: an area within which navigation and/or anchoring is prohibited.

8 DD Name: HYDRO Code: RESTRN_8 Date accepted: 2000-11-01

Name: entry restricted

Definition: a specified area designated by appropriate authority, within which navigation is restricted in

accordance with certain specified conditions.

9 DD Name: HYDRO Code: RESTRN 9 Date accepted: 2000-11-01

Name: dredging prohibited

Definition: an area within which dredging is not permitted.

10 DD Name: HYDRO Code: RESTRN 10 Date accepted: 2000-11-01

Name: dredging restricted

Definition: a specified area designated by appropriate authority, within which dredging is restricted in

accordance with certain specified conditions.

11 DD Name: HYDRO Code: RESTRN 11 Date accepted: 2000-11-01

Name: diving prohibited

Definition: an area within which diving is not permitted.

12 DD Name: HYDRO Code: RESTRN 12 Date accepted: 2000-11-01

Name: diving restricted

Definition: a specified area designated by appropriate authority, within which diving is restricted in

accordance with certain specified conditions.

13 DD Name: HYDRO Code: RESTRN 13 Date accepted: 2000-11-01

Name: no wake

Definition: mariners must adjust the speed of their vessels to reduce the wave or wash which may cause

erosion or disturb moored vessels.

14 DD Name: HYDRO Code: RESTRN_14 Date accepted: 2000-11-01

Name: area to be avoided

Definition: an IMO designated area to be avoided, defined as a routeing measure.

Value	Data Dictionary (DD) Reference								
15	DD Name:	HYDRO	Code:	RESTRN_15	Date accepted:	2000-11-01

	Definition:	nition: an area within which speed is restricted.								
38	DD Name:	IENC	Code:	restrn_38	Date accepted:	2000-11-01				
	Name:	use of spuds prohibited								
	Definition: The use of anchoring spuds (telescopic piles) is prohibited									

Attribute Scale minimum

Acronym: SCAMIN Code: 133

Use Type: F Value Type: I

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The minimum scale at which the object may be used e.g. for ECDIS presentation.

Attribute Sector limit one

Acronym: SECTR1 Code: 136

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2008-01-31

Definition: A sector is the part of a circle between two straight lines drawn from the centre to the circumference.

(Advanced Learner=s Dictionary, 2nd Edition) Sector limit 1 specifies the first limit of the sector. The order

of sector limit 1 and sector limit 2 is clockwise around the central object (e.g. a light).

Attribute Sector limit two

Acronym: SECTR2 Code: 137

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2008-01-31

Definition: A sector is the part of a circle between two straight lines drawn from the centre to the circumference.

(Advanced Learner=s Dictionary, 2nd Edition) The sector limit 2 specifies the second limit of the sector.

The order of sector limit 1 and sector limit 2 is clockwise around the central object (e.g. a light).

Attribute Signal frequency

Acronym: SIGFRQ Code: 139

Use Type: F Value Type: I

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The frequency of a signal.

Attribute Signal generation

Acronym: SIGGEN Code: 140

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: SIGGEN_1 Date accepted: 2000-11-01

Name: automatically

Definition: signal generation is initiated by a self regulating mechanism such as a timer or light sensor.

DD Name: HYDRO Code: SIGGEN 2 Date accepted: 2000-11-01

Name: by wave action

Definition: the signal is generated by the motion of the sea surface such as a bell in a buoy.

Attribute Signal group

Acronym: SIGGRP Code: 141

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The number of signals, the combination of signals or the morse character(s) within one period of full

sequence.

Attribute Signal period

Acronym: SIGPER Code: 142

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The time occupied by an entire cycle of intervals of light and eclipse.

Attribute Signal sequence

Acronym: SIGSEQ Code: 143

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The sequence of times occupied by intervals of light and eclipse for all 'light characteristics' except for

occulting where the sequence of times is occupied by intervals of eclipse and light.

Attribute Sounding accuracy

Acronym: SOUACC Code: 144

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The best estimate of the accuracy of the sounding data. The maximum of the one-dimensional error. The

error is assumed to be positive and negative. The plus/minus character shall not be encoded.

Attribute Source date

Acronym: SORDAT Code: 147

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The production date of the source, e.g. the date of measurement.

Attribute Source indication

Acronym: SORIND Code: 148

Use Type: F Value Type: S

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: Information about the source of the object.

Attribute Status

Acronym: STATUS Code: 149

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference Code: STATUS 2 2 DD Name: HYDRO Date accepted: 2000-11-01 Name: occasional Definition: acting on special occasions; happening irregularly. Value Data Dictionary (DD) Reference

DD Name: HYDRO Code: SURTYP_2 Date accepted: 2000-11-01

Name: controlled survey

Definition: a thorough survey usually conducted with reference to guidelines.

Attribute Symbol instruction

Acronym: SYMINS Code: 18029

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2015-01-01

Definition: This specifies the S-52 Presentation Library symbol instruction to be adopted in ECDIS for the new object

class (as specified in the S-52 Symbol Library - Addendum to S-52 Presentation Library).

Attribute Technique of sounding measurement

Acronym: TECSOU Code: 156

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition:

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: HYDRO Code: TECSOU 1 Date accepted: 2000-11-01

Name: found by echo-sounder

Definition: the depth was determined by using an instrument that determines depth of water by measuring the time interval between emission of a sonic or ultrasonic signal and return of its echo from the bottom.

(adapted from IHO Dictionary, S-32, 1547)

DD Name: HYDRO Code: TECSOU_2 Date accepted: 2000-11-01

Name: found by side-scan-sonar

Definition: the depth was computed from a record produced by active sonar in which fixed acoustic beams are directed into the water perpendicularly to the direction of travel to scan the bottom and generate a

record of the bottom configuration. (adapted from IHO Dictionary, S-32, 4710)

3 DD Name: HYDRO Code: TECSOU 3 Date accepted: 2000-11-01

Name: found by multi-beam

Definition: the depth was determined by using a wide swath echo sounder that uses multiple beams to measure depths directly below and transverse to the ship's track. (adapted from IHO Dictionary, S-32, 3339)

4 DD Name: HYDRO Code: TECSOU 4 Date accepted: 2000-11-01

Name: found by diver

Definition: the depth was determined by a person skilled in the practice of diving. (adapted from IHO

Dictionary, S-32, 1422)

5 DD Name: HYDRO Code: TECSOU 5 Date accepted: 2000-11-01

Name: found by lead-line

Value Data Dictionary (DD) Reference

> Definition: the depth was determined by using a line, graduated with attached marks and fastened to a sounding lead. (adapted from IHO Dictionary, S-32, 2698)

6 DD Name: HYDRO Code: TECSOU 6 Date accepted: 2000-11-01

> Name: swept by wire-drag

Definition: the given area was determined to be free from navigational dangers to a certain depth by towing a buoyed wire at the desired depth by two launches, or a least depth was identified using the same technique. (adapted from IHO Dictionary, S-32, 5248, 6013)

7 DD Name: HYDRO Code: TECSOU 7 Date accepted: 2000-11-01

> Name: found by laser

Definition: the depth was determined by using an instrument that measures distance by emitting timed pulses of laser light and measuring the time between emission and reception of the reflected pulses. (adapted from IHO Dictionary, S-32, 2763)

8 DD Name: HYDRO Code: TECSOU 8 Date accepted: 2000-11-01

> Name: swept by vertical acoustic system

Definition: the given area has been swept using a system comprised of multiple echo sounder transducers attached to booms deployed from the survey vessel.

9 DD Name: HYDRO Code: TECSOU 9 Date accepted: 2000-11-01

> Name: found by electromagnetic sensor

Definition: the depth was determined by using an instrument that compares electromagnetic signals. (adapted from IHO Dictionary, S-32, 1571)

10 DD Name: HYDRO Code: TECSOU 10 Date accepted: 2000-11-01

> Name: photogrammetry

Definition: the depth was determined by applying mathematical techniques to photographs. (adapted from IHO Dictionary, S-32, 3791)

11 DD Name: HYDRO Code: TECSOU 11 Date accepted: 2000-11-01

> Name: satellite imagery

Definition: the depth was determined by using instruments placed aboard an artificial satellite. (adapted from IHO Dictionary, S-32, 4509)

12 DD Name: HYDRO Code: TECSOU 12 Date accepted: 2000-11-01

> Name: found by levelling

Definition: the depth was determined by using levelling techniques to find the elevation of the point relative

to a datum. (adapted from IHO Dictionary, S-32, 2741)

13 DD Name: HYDRO Code: TECSOU 13 Date accepted: 2000-11-01

385 IENC FC 25 corr1.docx

Value Data Dictionary (DD) Reference

Name: swept by side-scan-sonar

Definition: the given area was determined to be free from navigational dangers to a certain depth by

towing a side-scan-sonar. (adapted from IHO Dictionary, S-32, 5248, 4710) [415.2]

14 DD Name: HYDRO Code: TECSOU_14 Date accepted: 2000-11-01

Name: computer generated

Definition: the sounding was determined from a bottom model constructed using a computer.

Attribute Textual description

Acronym: TXTDSC Code: 158

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The string encodes the file name of an external text file that contains the text in English

Attribute Textual description in national language

Acronym: NTXTDS Code: 304

Use Type: N Value Type: T

Data Dictionary (DD) Reference:

DD Name: HYDRO Date accepted: 2000-11-01

Definition: The file name of an external text file that contains the text in a national language.

Attribute Topmark/daymark shape

Acronym: **TOPSHP** Code: 171

Enumerations:

Value

1 DD Name: HYDRO Code: TOPSHP 1 Date accepted: 2000-11-01

> Name: cone, point up

Data Dictionary (DD) Reference

Definition: is where the vertex points up.

2 DD Name: HYDRO Code: TOPSHP 2 Date accepted: 2000-11-01

> Name: cone, point down

Definition: is where the vertex points down.

3 DD Name: HYDRO Code: TOPSHP_3 Date accepted: 2000-11-01

> Name: sphere

Definition: a body the surface of which is at all points equidistant from the centre. (The New Shorter Oxford English Dictionary. 1993. vol 2). Spheres are commonly used as International Association of Lighthouse Authorities - IALA topmarks (safe water).

4 DD Name: HYDRO Code: TOPSHP_4 Date accepted: 2000-11-01

> Name: 2 spheres

Definition: two black spheres are commonly used as an International Association of Lighthouse Authorities

- IALA topmark (isolated danger).

5 DD Name: HYDRO Code: TOPSHP 5 Date accepted: 2000-11-01

> Name: cylinder (can)

Definition: a solid geometrical figure generated by straight lines fixed in direction and describing with one of point a closed curve, especially a circle (in which case the figure is circular cylinder, it's ends being parallel circles). (The New Shorter Oxford English Dictionary. 1993. vol 2). Cylinders are commonly used as

IENC FC 25 corr1.docx 389 Value Data Dictionary (DD) Reference International Association of Lighthouse Authorities - IALA topmarks (lateral). 6 DD Name: HYDRO Code: TOPSHP 6 Date accepted: 2000-11-01 Name: board Definition: usually of rectangular shape, made from timber or metal and used to provide a contrast with the natural background of a daymark. The actual daymark is often painted on to this board. 7 DD Name: HYDRO Code: TOPSHP 7 Date accepted: 2000-11-01 Name: x-shape (St. Andrew's cross) Definition: having a shape or a cross-section like the capital letter X. (The New Shorter Oxford English Dictionary, 1993, vol 2). An x-shape as an International Association of Lighthouse Authorities - IALA topmark should be 3 dimensional in shape. It is made of at least three crossed bars. 8 DD Name: HYDRO Code: TOPSHP 8 Date accepted: 2000-11-01 upright cross (St George's cross) Name: Definition: a cross with one vertical member and one horizontal member, i.e. similar in shape to the character '+'. 9 DD Name: HYDRO Code: TOPSHP 9 Date accepted: 2000-11-01 Name: cube, point up Definition: a cube standing on one of its vertexes. 10 DD Name: HYDRO Code: TOPSHP 10 Date accepted: 2000-11-01 2 cones, point to point Name: Definition: 2 cones, one above the other, with their vertices together in the centre. 11 DD Name: HYDRO Code: TOPSHP 11 Date accepted: 2000-11-01 Name: 2 cones, base to base Definition: 2 cones, one above the other, with their bases together in the centre and their vertices pointing up and down. 12 DD Name: HYDRO Code: TOPSHP 12 Date accepted: 2000-11-01 Name: rhombus (diamond) Definition: a plane figure having four equal sides and equal opposite angles (two acute and two obtuse); an oblique equilateral parallelogram. (The New Shorter Oxford English Dictionary. 1993. vol 2) Date accepted: 2000-11-01 13 DD Name: HYDRO Code: TOPSHP 13 Name: 2 cones (points upward) Definition: 2 cones, one above the other, with their their vertices pointing up

Value Data Dictionary (DD) Reference

7 DD Name: IENC Code: catslc 7 Date accepted: 2007-10-12

Name: training wall

Definition: a wall or bank, often submerged, built to direct or confine the flow of a river or tidal current, or to

promote a scour action. (Adapted from IHO Dictionary, S-32, 5th Edition, 5586 and IHO Chart

Specifications, M-4).

18 DD Name: IENC Code: catslc 18 Date accepted: 2007-10-12

Name: lock/guide wall

Definition: permanent structure bounding a lock and including guide walls (USACE)

19 DD Name: IENC Code: catslc 19 Date accepted: 2009-09-11

Name: ice breaker

Definition: an often wedge-like structure used for protecting a bridge pier, dock, facility, etc. from floating

ice or other debris.

2 DD Name: IENC Code: catslc_2 Date accepted: 2011-05-31

Name: groyne (groin)

Definition: a low artificial wall-like structure of durable material extending from the land to seaward for a particular purpose, such as to prevent coast erosion (adapted from IHO Dictionary, S-32, 5th Edition, 2525)

and IHO Chart Specifications, M-4)

8 DD Name: IENC Code: catslc 8 Date accepted: 2013-01-23

Name: rip rap

Definition: A layer of broken rock, cobbles, boulders, or fragments of sufficient size to resist the erosive

Value Data Dictionary (DD) Reference

forces of flowing water and wave action. (Adapted from Marine Chart Manual, US National Oceanic and

Atmospheric Administration - NOAA, 1992)

DD Name: IENC 9 Code: catslc_9 Date accepted: 2013-01-23

> Name: revetment

Definition: facing of stone or other material, either permanent or temporary, placed along the edge of a stream, river or canal to stabilize the bank and to protect it from the erosive action of the stream. (Adapted

from IHO Dictionary, S-32, 5th Edition, 4379)

20 DD Name: IENC Code: catslc 20 Date accepted: 2013-09-23

> Name: water intake structure

Definition: a structure designed to divert water from a river or channel for the purpose of water supply,

hydroelectric power or irrigation.

Value Data Dictionary (DD) Reference 1 DD Name: IENC Code: marsys 1 Date accepted: 2001-05-31 Name: IALA A Definition: navigational aids conform to the International Association of Lighthouse Authorities - IALA A system. 2 DD Name: IENC Code: marsys 2 Date accepted: 2001-05-31 **IALA B** Name: Definition: navigational aids conform to the International Association of Lighthouse Authorities - IALA B system. 9 DD Name: IENC Code: marsys 9 Date accepted: 2001-05-31 Name: no system Definition: navigational aids do not conform to any defined system. 10 DD Name: IENC Code: marsys_10 Date accepted: 2001-05-31 Name: other system Definition: navigational aids conform to a defined system other than International Association of Lighthouse Authorities -IALA. 11 DD Name: IENC Code: marsys 11 Date accepted: 2001-05-31 Name: **CEVNI** Definition: navigational aids conform to the European Code for Inland Waterways of UN/ECE. 12 DD Name: IENC Code: marsys_12 Date accepted: 2001-05-31

IENC FC 25 corr1.docx 503

Value Data Dictionary (DD) Reference

Name: Russian inland waterway regulations

Definition: navigational aids conform to the Russian inland waterway regulations.

13 DD Name: IENC Code: marsys_13 Date accepted: 2009-09-11

Name: Brazilian national inland waterway regulations - two sides

Definition: navigational aids conform to the Brazilian national inland waterway regulations for two sides.

14 DD Name: IENC Code: marsys_14 Date accepted: 2009-09-11

Name: Brazilian national inland waterway regulations - side independent

Definition: navigational aids conform to the side independent Brazilian national inland waterway

regulations.

15 DD Name: IENC Code: marsys_15 Date accepted: 2009-09-11

Name: Paraguay-Parana waterway - Brazilian complementary aids

Definition: Brazilian complementary navigational aids on the Paraguay-Parana waterway.

Attribute Maximal permitted beam

Acronym: lg_bme Code: 18003

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: The maximal permitted beam (width of a ship's hull) of a vessel or convoy according to the particular

article/clause of the applicable law/regulation

Attribute Maximal permitted draught

Acronym: lg_drt Code: 18005

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: The maximal permitted draught of a vessel or convoy according to the particular article/clause of the

applicable law/regulation

Attribute Maximal permitted length

Acronym: lg_lgs Code: 18004

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: The maximal permitted length of a vessel or convoy according to the particular article/clause of the

applicable law/regulation

Attribute Maximal permitted speed

Acronym: lg_spd Code: 18001

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: The maximal permitted vessel speed according to the particular article/clause of the applicable

law/regulation

Attribute Maximal permitted water displacement

Acronym: lg_wdp Code: 18006

Use Type: F Value Type: F

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: The maximal permitted water displacement of a vessel or convoy according to the particular article/clause

of the applicable law/regulation

Attribute MMSI Code

Acronym: mmsico Code: 18046

Use Type: F Value Type: I

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2017-05-30

Definition: Maritime Mobile Service Identity code

Attribute Name of other locally relevant water level

Acronym: othnam Code: 17087

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Name of the water level, which is used for the attribute othwat (value at other locally relevant water level)

including version identification, for example year of issue or period

Attribute Name of relevant high water level

Acronym: hignam Code: 17081

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Name of the water level, which is used for the attribute higwat (value at relevant high water level) including

version identification, for example year of issue or period

Attribute Name of relevant low water level

Acronym: lownam Code: 17083

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Name of the water level, which is used for the attribute lowwat (value at relevant low water level) including

version identification, for example year of issue or period

Attribute Name of relevant mean water level

Acronym: meanam Code: 17085

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Name of the water level, which is used for the attribute mawat (value at relevant mean water level)

including version identification, for example year of issue or period

Attribute Name of Sounding datum reference level

Acronym: sdrlev Code: 17089

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Name of the water level depth values are referred to

Attribute Name of vertical river datum reference level

Acronym: vcrlev Code: 17090

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Name of the water level vertical clearance values are referred to

Attribute Number of shore connectors

Acronym: shrnum Code: 18035

Use Type: F Value Type: I

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2014-11-26

Definition: The number of shore connectors available at the power supply station.

Attribute Publication reference

Acronym: lg_pbr Code: 18011

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Waterway or waterway section for which a juridical regulation with respect to the maximum permitted

vessel dimensions exists

Attribute Reference Gauge

Acronym: refgag Code: 18018

Use Type: F Value Type: T

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2013-01-11

Definition: The ISRS code of the gauge which can be used to calculate the vertical clearance

Attribute Reference gravitational level

Acronym: reflev Code: 17088

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Gravitational reference level

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: IENC Code: reflev 1 Date accepted: 2001-05-31

Name: Baltic datum

Definition: Baltic Datum (Baltic Heights System) - The unified State system for absolute heights reckoning from Kronshtadt Tide-gauge Datum that is accepted in Russian Federation. (Hydrographic Terminology

Dictionary, HDNO, 1984)-

2 DD Name: IENC Code: reflev_2 Date accepted: 2001-05-31

Name: Adriatic level

Definition: The average height of the surface of the Adriatic sea at the tide station of Trieste in Italy.

3 DD Name: IENC Code: reflev 3 Date accepted: 2001-05-31

Name: Amsterdam Ordnance Datum (NAP)

Definition: Dutch gravitational reference level that is approximately the average summer height of the

North Sea.

4 DD Name: IENC Code: reflev 4 Date accepted: 2001-05-31

Name: Mean Sea Level

Definition: (MSL) - the average height of the surface of the sea at a tide station for all stages of the tide over a 19-year period, usually determined from hourly height readings measured from a fixed predetermined

reference level. (IHO Dictionary, S-32, 5th Edition, 3156)

5 DD Name: IENC Code: reflev 5 Date accepted: 2001-05-31

Name: Other datum

Definition:

Value Data Dictionary (DD) Reference

6 DD Name: IENC Code: reflev_6 Date accepted: 2001-05-31

Name: National Geodetic Vertical Datum - NGVD29

Definition: The name, after May 10, 1973, of the Sea Level Datum of 1929.

7 DD Name: IENC Code: reflev_7 Date accepted: 2001-05-31

Name: North American Vertical Datum - NAVD88

Definition: The vertical control datum established in 1991 by the minimum-constraint adjustment of

geodetic leveling observations in Canada, the United States, and Mexico.

8 DD Name: IENC Code: reflev 8 Date accepted: 2001-05-31

Name: Mean sea level 1912

Definition: A vertical control datum established for vertical control in the United States by the general

adjustment of 1912.

9 DD Name: IENC Code: reflev 9 Date accepted: 2001-05-31

Name: Mean sea level 1929

Definition: A vertical control datum established for vertical control in the United States by the general

adjustment of 1929.

10 DD Name: IENC Code: reflev 10 Date accepted: 2015-03-09

Name: Tweede Algemene Waterpassing (TAW)

Definition: All heights in Belgium are referenced to TAW

Attribute Related issue

Acronym: lg_rel Code: 18008

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Indication of the related legal issue

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: IENC Code: Ig_rel_1 Date accepted: 2001-05-31

Name: other

Definition:

2 DD Name: IENC Code: Ig rel 2 Date accepted: 2001-05-31

Name: usage of waterway

Definition:

3 DD Name: IENC Code: lg_rel_3 Date accepted: 2001-05-31

Name: carriage of equipment

Definition:

4 DD Name: IENC Code: lg_rel_4 Date accepted: 2001-05-31

Name: task,operation

Definition:

Attribute Restriction

Acronym: restrn Code: 17004

Use Type: F
Value Type: L

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Restriction

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: IENC Code: restrn 1 Date accepted: 2001-05-31

Name: anchoring prohibited

Definition: an area within which anchoring is not permitted.

DD Name: IENC Code: restrn_2 Date accepted: 2001-05-31

Name: anchoring restricted

Definition: a specified area designated by appropriate authority, within which anchoring is restricted in

accordance with certain specified conditions.

7 DD Name: IENC Code: restrn 7 Date accepted: 2001-05-31

Name: entry prohibited

Definition: an area within which navigation and/or anchoring is prohibited. (adapted from IHO Dictionary,

S-32, 5th Edition, 4044)

8 DD Name: IENC Code: restrn_8 Date accepted: 2001-05-31

Name: entry restricted

Definition: a specified area designated by appropriate authority, within which navigation is restricted in

accordance with certain specified conditions. (adapted from IHO Dictionary, S-32, 5th Edition, 4366)

13 DD Name: IENC Code: restrn 13 Date accepted: 2001-05-31

Name: no wake

Definition: mariners must adjust the speed of their vessels to reduce the wave or wash which may cause

erosion or disturb moored vessels.

Value	Data Dictionary (DD) Reference											
14	DD Name:	IENC	Code:	restrn_14	Date accepted:	2001-05-31						
	Name:	area to be avoided										
		nition: an IMO designated area to be avoided, defined as a routeing measure. (adapted from IHO t Specifications, M-4, 435.7)										
27	DD Name:	IENC	Code:	restrn_27	Date accepted:	2001-05-31						
	Name:	speed restricted										
	Definition:	an area within which speed is restricted.										
28	DD Name:	IENC	Code:	restrn_28	Date accepted:	2001-05-31						
	Name:	overtaking prohibited										
	Definition: prohibited	a specified area designated by appropriate authority, within which overtaking is generally										
29	DD Name:	IENC	Code:	restrn_29	Date accepted:	2001-05-31						
	Name:	overtaking of convoys by convoys prohibited										
	Definition: prohibited	which overtaking between convoys										
30	DD Name:	IENC	Code:	restrn_30	Date accepted:	2001-05-31						
	Name:	passing or overtaking prohibited										
	Definition: a specified area designated by appropriate authority, within which passing or overtaking generally prohibited											
31	DD Name:	IENC	Code:	restrn_31	Date accepted:	2001-05-31						
	Name:	berthing prohibited										
	Definition: a specified area designated by appropriate authority, within which vessels, assemblies of floating material or floating establishments may not berth.											
32	DD Name:	IENC	Code:	restrn_32	Date accepted:	2001-05-31						
	Name:	berthing restricted										
	Definition:	a specified area designated by appropriate authority, within which berthing is restricted										
33	DD Name:	IENC	Code:	restrn_33	Date accepted:	2001-05-31						
	Name:	making fast prohibited										
	Definition: a specified area designated by appropriate authority, within which vessels, assemble floating material or floating establishments may not make fast to the bank.											
34	DD Name:	IENC	Code:	restrn_34	Date accepted:	2001-05-31						

IENC_FC_25_corr1.docx 524

Name:

NOx emission restricted

Definition: AN area within which the emission of Nox is restricted.

Value Data Dictionary (DD) Reference Name: making fast restricted Definition: a specified area designated by appropriate authority, within which making fast to the bank is restricted 35 DD Name: IENC Code: restrn 35 Date accepted: 2001-05-31 Name: turning prohibited Definition: a specified area designated by appropriate authority, within which all turning is generally prohibited 36 DD Name: IENC Code: restrn 36 Date accepted: 2001-05-31 restricted fairway depth Name: Definition: an area within which the fairway depth is restricted. 37 DD Name: IENC Code: restrn 37 Date accepted: 2001-05-31 Name: restricted fairway width Definition: an area within which the fairway width is restricted. 38 DD Name: IENC Code: restrn 38 Date accepted: 2014-11-26 use of spuds prohibited Name: Definition: the use of anchoring spuds (telescopic piles) is prohibited 40 DD Name: IENC Code: restrn 40 Date accepted: 2017-11-06 Name: SOx emission restricted Definition: An area within which the emission of Sox is restricted. 41 DD Name: IENC Code: restrn 41 Date accepted: 2017-11-06

Acronym: typatn Code: 18047

Use Type: F Value Type: L

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2019-10-23

Definition: The type of AtoN being referenced

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: IENC Code: typatn_1 Date accepted: 2019-10-23

Name: AtoN

Definition: Aid to Navigation

DD Name: IENC Code: typatn 2 Date accepted: 2019-10-23

Name: Real AIS AtoN

Definition: An AIS station located on an existing physical aid to navigation

3 DD Name: IENC Code: typatn_3 Date accepted: 2019-10-23

Name: Virtual AIS AtoN

Definition: An electronically charted, but non-existent as a physical aid to navigation

Attribute Type of Ship

Acronym: shptyp Code: 33066

Use Type: F Value Type: E

Data Dictionary (DD) Reference:

DD Name: IENC Date accepted: 2001-05-31

Definition: Type of ship

Enumerations:

Value Data Dictionary (DD) Reference

1 DD Name: IENC Code: shptyp_1 Date accepted: 2001-05-31

Name: general cargo vessel

Definition: a vessel which is designed for carrying general cargo, e.g. boxes, sacks.

2 DD Name: IENC Code: shptyp_2 Date accepted: 2001-05-31

Name: container vessel

Definition: a vessel which is designed for carrying containers.

3 DD Name: IENC Code: shptyp_3 Date accepted: 2001-05-31

Name: tanker

Definition: a vessel which is designed for carrying liquid goods, e.g. oil or water.

4 DD Name: IENC Code: shptyp 4 Date accepted: 2001-05-31

Name: sailing vessel

Definition: a vessel that is powered by the wind; often having several masts.

5 DD Name: IENC Code: shptyp_5 Date accepted: 2001-05-31

Name: fishing vessel

Definition: a vessel that is used and equipped for the fishing of living aquatic resources.

6 DD Name: IENC Code: shptyp_6 Date accepted: 2001-05-31

Name: special purpose vessel.

Definition: a vessel that fulfills special purposes e.g. hovercrafts, pilot boats

IENC_FC_25_corr1.docx 532

Value	Data Dictionary (DD) Reference								
7	DD Name:	IENC	Code:	shptyp_7	Date accepted:	2001-05-31			
	Name:	man of War							
	Definition:	armed naval vessel.

A - Introduction

A. Introduction

Background

Based on the findings of the European transport R&D project INDRIS (Inland Navigation Demonstrator for River Information Services) and the German project ARGO in 2001, both the Danube and the Rhine Commissions adopted an Inland Electronic Chart Display and Information Systems (ECDIS) standard for Electronic Navigational Chart (ENC) data and system requirements for the Rhine and the Danube Rivers. In 2001, the Economic Commission for Europe of the United Nations (UN ECE) adopted the Inland ECDIS Standard as a recommendation for the European inland waterway system (CCNR 2002).

In the USA, following a 1999 recommendation by the National Transportation Safety Board, the U.S. Army Corps of Engineers (USACE) initiated a program to facilitate the production and implementation of Inland ENCs on major river and inland waterway systems in the United States.

While there are some differences between the North American and European inland waterways, there are far more similarities. A North American - European Inland ENC Workshop was held in 2003 in conjunction with a Conference on River Information Services (RIS) organized by the European R&D-project COMPRIS (Consortium Operational Management Platform River Information Services). In addition to informing participants on the status of standards development and projects being conducted, a key objective was to discuss the benefits of harmonizing Inland ENC data standards between Europe and North America.

The North American - European Inland ENC Harmonization Group (IEHG) was formed in 2003 to facilitate the development of international standards for Inland ENC data. The IEHG is comprised of representatives from government, industry and academia. European participants take part on behalf of the European Inland ECDIS Expert Group. The North American participants are members of the North American Inland ENC Ad Hoc working group that was formed in 2002. The IEHG meets once per year. However, most of the work is accomplished via e-mail correspondence, the website https://ienc.openecdis.org/ and the Inland ENC discussion forum https://ienc.openecdis.org/ and the Inland ENC discussion forum

The goal of the IEHG is to agree upon specifications for Inland ENCs that are suitable for all known inland ENC data requirements for safe and efficient navigation for European and North American inland waterways. However, it is intended that this standard meets the basic needs for Inland ENC applications, worldwide. As such, the Inland ENC standard is flexible enough to accommodate additional inland waterway requirements in other regions of the world.

In September 2005, the Ministry of Transport of the Russian Federation became a member of the IEHG. In 2007, Brazil through its national Hydrographic Service, the Directorate of Hydrography and Navigation (DHN), joined the IEHG as the first South American country. In October 2009, the Waterborne Transportation Institute of the Ministry of Transport, Peoples Republic of China became the first member of the IEHG from the Asian region.

IEHG also works closely with the International Hydrographic Organization (IHO). At the ECDIS stakeholders' forum in 2007, IHO confirmed that compatibility with Inland ENC standards is allowed by the standards that are certified for maritime ECDIS applications. On 14 April 2009, IEHG became recognized as a Non-Governmental International Organization (NGIO) of IHO. In addition, at the 4th Extraordinary International Hydrographic Conference on 4 June 2009, IHO adopted a resolution to cooperate with the IEHG.

As an NGIO, IEHG supports, advises and provides input to IHO regarding Inland ENC matters.

Inland Electronic Navigational Chart Defined

Inland Electronic Navigational Chart (IENC) means: the database, standardized as to content, structure and format, for use with inland electronic chart display and / or information systems operated onboard of vessels transiting inland waterways. An IENC is issued by or on the authority of a competent government agency, and conforms to standards [initially] developed by the International Hydrographic Organization (IHO) and [refined by] the Inland ENC Harmonization Group. An IENC contains all the chart information necessary for safe navigation on inland waterways and may contain supplementary information in addition to that contained in the paper chart (e.g. sailing directions,

machine-readable operating schedules, etc.) which may be considered necessary for safe navigation and voyage planning.

IENC Standards

The framework for Inland ENC standards includes:

- 1. Use of **IHO S-57** (Edition 3.1), including:
 - a. 'Maritime' ENC Product Specification (Appendix B1)
 - b. Object Catalogue (Appendix A)
 - c. Use of Object Catalogue (Appendix B.1, Annex A)
- 2. A minimum **Inland ENC Product Specification** that includes mandatory requirements for safety-of-navigation on inland waterways, worldwide.
- 3. An **Inland ENC Encoding Guide** that provides guidance on recommended object classes, attributes, and attribute values for encoding IENC data.
- 4. Inland ENC Feature Catalogue.
- 5. Establishment of an **Inland ENC domain** for additional IENC features, attributes, and enumerations that are not already contained in other domains of the S-100 registry.
- 6. Use of the ienc.openecdis.org as a means of communication.
- 7. Align with the **IHO S-100** Universal Hydrographic Data Model. In particular, this includes the Inland ENC domain as part of the overall S-100 Geospatial Information Registry.

The current version of IENC-related standards are published at http://ienc.openecdis.org.

Two other Inland IENC-related standards that are not maintained by IEHG, but are used in Europe include:

- 1. Inland ECDIS Standard
- 2. IENC Presentation Library

Copies of all IENC-related standards are available at: http://ienc.openecdis.org/.

IENC Encoding Guide

The IENC Encoding Guide provides detailed guidance on what is required to produce a consistent, uniform Inland ENC.

For all object classes, attributes, and attribute values that are used in conjunction with an IENC, the IENC Encoding Guide:

- 1. Provides a basis for its creation
- 2. Describes its relationship to the real-world entity
- 3. Provides criteria for its proper use
- 4. Gives specific encoding examples
- 5. Provides real-world and graphic examples of IENC information (portrayal)

Minimum Contents of an IENC

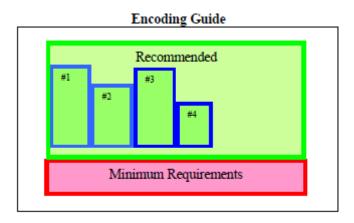

At a **Minimum**, the following objects shall be included in an IENC, if they exist:

- 1. Bank of waterway
- 2. Shoreline construction (e.g., groin, training wall)
- 3. Any facility that is considered a hazard to navigation
- 4. Contours of locks and dams (i.e., footprint area)
- 5. Boundaries of the navigation channel (if defined)
- 6. Isolated dangers in the navigation channel that are either:
 - a. underwater (obstructions)
 - b. above water level (e.g., bridges, overhead cables)
- 7. Official Aids-to-Navigation (e.g. buoys, beacons, lights, notice marks)
- 8. Waterway axis with kilometres/hectometres

In addition to these minimum requirements, the Encoding Guide contains recommended objects, attributes and

ES-RIS 2025/1 - Annex 1 - Appendix 2 attribute values that are suitable for any Inland ENC application, worldwide. Each country or region can decide which of these recommended objects, attributes and attribute values are necessary to meet their requirements. For example, in Europe and the USA, there are different requirements for River Information Services (RIS). (See diagram below for reference.)

When the competent authorities in Europe define the "navigable water" for their individual waterways they should take into account water areas which can be used at mean water level by vessels with a hull length of 20m or more that are typically used on these waterways. Water areas on which navigation is prohibited are not "navigable water". If an object which is minimum content when it is situated in navigable water is situated outside of the navigable water, it is recommended to encode it.

#1 = additional requirements of river system for region 1

#2 = additional requirements of river system for region 2

#3, #4, etc.

Changes to the IENC Encoding Guide

The IENC Encoding Guide is a living document that can be modified, as needed, to accommodate future Inland ENC requirements and development, worldwide. The procedures are defined in the Terms of Reference of the Inland ENC Harmonization Group.

B - General Guidance

A. Features & Attributes: Mandatory, Conditional, Optional

Each feature class and attribute class in the harmonization guide has been dassified for encoding purposes as mandatory, conditional or optional.

- Mandatory (M) features or attributes must be encoded. For attributes, if the value is not known, it must be coded as "unknown".
- Conditional (C) features or attributes are mandatory (must be encoded) if defined conditions are met (e.g. if a feature has multiple colours, a colour pattern must be encoded). If the defined conditions are not met, the features or attributes are Optional (O).
- Optional (O) features or attributes should be encoded if the value is known.

B. Attribute Classes Associated With All Geo Object Classes

The following attribute classes can be associated with all geo object classes in an IENC:

SORIND

US: The source indicator is a <u>mandatory</u> attribute and must be coded for all objects in the IENC. All objects in the Encoding Guide state that SORIND is Conditional (C); the condition that must be met is that it is a US produced chart

The format is: 2 character country code, 2 character authority code, 5 character source code, identifier (no restriction on number of characters).

- Examples:
 - For navigation features reference an authority such as the USCG Mississippi River System Light List, Volume 5: (US,U3,MS LL,2004 Edition No.808)
 - o For hydrographic features reference appropriate survey: (US,U3,SURVY,2001_Hydro_Survey)
 - For other features reference appropriate survey data: (US,U3,SURVY,1999_Aerial_Survey)

EU: The source indicator must only be coded for an object in an IENC when the source is different from the producer of the IENC and the producer wants to exclude liability.

The format is: 2 character country code, other codes (no restriction on number of characters). All other coding is at the decision of the local authority.

BR: SORIND is an optional attribute which may be used for an object in an IENC when the source is different from the producer of the IENC.

The format is: 2 character country code, description of the responsible authority (no restriction on number of characters).

SORDAT

The production date of the source of the data (e.g. the date of measurement). The source date should be coded for those objects in an IENC, which are changing regularly, for example depth information.

The format is yearmonthday (YYYYMMDD).

- Example:
 - SORDAT coding for a feature with of source date of September 30, 2004 is 20040930

US: SORDAT is a <u>mandatory</u> attribute and must be coded for all objects in the IENC. SORDAT should be set to the release date of the chart if the actual source dates of the data unavailable.

EU: SORDAT for other objects it might be set to "unknown".

BR: SORDAT is optional.

OBJNAM

Use to code feature's name (do not include information on characteristics of feature). Name must be in Title Case. Use abbreviations where possible. Use short names only to avoid clutter in the display. OBJNAM shall be entered in local language using Basic Latin Unicode characters, e.g. Baarlerbruecke, Volkeraksluis or Wien.

NOBJNM

Whenever OBJNAM is used, it is also possible to use NOBJNM. NOBJNM may be used for names in the National Language, for example, Cyrillic characters.

INFORM

Use to code navigationally significant information about the feature that cannot be coded by attributes. INFORM should always be in English.

NINFOM

Whenever INFORM is used, it is also possible to use NINFOM. INFORM should always be in English, whereas NINFOM may be used for the National Language, for example, Cyrillic characters.

TXTDSC

Use to link textual descriptions or feature information in an ASCII file. For object names within the TXTDSC file, the same rules as for the attribute OBJNAM are applicable. Free text within the TXTDSC file should be provided in English language.

Note that filename must be in UPPER CASE.

US: Formatis AARRMMMXNN.EXT where:

AA = 2-character Producer Code

RR = 2-character river code

MMM = 3-digit river mile or river km, 000-999

X = tenth of river mile/km; preceding decimal point implied; use zero if river mile/km known only to the nearest mile.

NN = 01-99; unique identifier for text file at the particular river mile/km.

For example, if three TXTDSC files exist at the same river mile/km, 01, 02, and 03 would be used.

EXT = 3-character file extension for Hypertext Metafile (HTM), ASCII text (TXT), or Standardized External XML file with communication information.

EU: The ISRS Location Code can be used for the file name, e.g. DEXXX03900000005023.XML.

NTXTDS

Use to link textual descriptions or feature information in the national language (if the national language is not English) in an ASCII file. For object names within the NTXTDS file, the same rules as for the attribute NOBJNM are applicable. Free text within the NTXTDS file should be provided in the national language.

Note that filename must be in UPPER CASE.

EU: The two letter language code can be added to the file name, e.g. DEXXX03900000005023DE.XML

PICREP

Use to link imagery related to feature. Note that the filename must be in UPPER CASE. Image should be 640 x 480 pixels in resolution.

Formatis AARRMMMXNN.EXT, where:

AA = 2-character Producer Code

RR = 2-character river code

MMM = 3-digit river mile or river km, 000-999

X = tenth of river mile/km; preceding decimal point implied; use zero if river mile/km known only to the nearest mile.

NN = 01-99; unique identifier for image file at the particular river mile/km.

For example, if three PICREP files exist at the same river mile/km, 01, 02, and 03 would be used. EXT = 3-character file extension for the image file format; most commonly TIFF (TIF) or JPEG (JPG) formats.

C. Scale Minimum

The values for the scale minimum mentioned in the encoding guide are recommendations for European and N. American waterways. The chart producer might deviate from these values in order to improve the chart display in special situations, for example on very small or very large waterways. The value of SCAMIN has to be set to a scale value smaller than or equal to the compilation scale of the data for the area.

D. Numeric Precision

The maximum number of decimals of numeric attributes is defined in the Feature Catalogue (e.g. XX.dd for maximum two decimals). The encoding of numeric attributes (e.g. of depth information and heights of structures) should reflect the accuracy of the number. For example a bridge height of thirty-five meters, accurate to one meter, has to be encoded as 35, not as 35.0 or 35.00. Measured values without safety margins should be used.

E. <u>Feature Naming and Text Display</u>

US: Any important navigation notes that should always be shown on the IENC should be encoded as LNDRGN (P) on land or SEAARE (P) objects in the water.

EU: Use the appropriate object to display information (e.g. comare).

F. Assigning Approximate Positions

To assign an approximate position ('PA') for charted features, the attribute Quality of Position [QUAPOS = 4 (approximate)] is assigned to the appropriate spatial object (point or line). It is not assigned to the feature object (e.g. WRECKS object), but to the spatial reference for the feature object. When correctly coded, the electronic chart system will display 'PA' adjacent to the feature object.

G. Navigational Purpose

The following types of Navigational Purpose ("usage") are available:

Subfield	Navigational purpose	Definition for intended use
1	Overview:	For route planning and oceanic crossing.
2	General:	For navigating oceans, approaching coasts and route planning.
3	Coastal:	For navigating along the coastline, either inshore or offshore.
4	Approach:	Navigating the approaches to ports or mayor channels or through intricate or congested waters.
5	Harbour:	Navigating within ports, harbours, bays, rivers and canals, for anchorages.
6	Berthing:	Detailed data to aid berthing.
7	River:	Navigating the inland waterways (skin cell).
8	River harbour:	Navigating within ports and harbours on inland waterways (skin cell).
9	River berthing:	Detailed data to aid berthing maneuvering in inland navigation (skin cell).
Α	Overlay:	Overlay cell to be displayed in conjunction with skin cells

The Navigational Purposes 1 to 8 may be used by authorities as well as private bodies. Navigational Purpose 9 may only be used by private bodies. Overlay cells may be used by authorities as well as private bodies.

Within overlapping cells with the same navigational purpose skin-of-the-earth objects of the same object class must not overlap.

The letter "A" at the third position of the file name indicates that the cell is displayed as overlay over other cells within a range of usages. Overlay cells may not contain skin-of-the-earth objects. The range of usages of overlay cells is indicated in the Data Set Identification Field of the header of the overlay cell (see S57, Part 3, Data Structure, ch. 7.3.1.1). The 8th bit of the intended usage subfield (INTU) has to be set, if a range is used and the other seven bits describe the range (e.g. 25 means a range from usage 2 to usage 5).

H. UN Location Code

The attribute 'unlocd' should be used to encode the UN Location Code (http://www.unece.org/cefact/locode/service/main.htm) or, in Europe, the Inland Ship Reporting Standard (ISRS) Location Code; which is used to establish a standardized relation to other River Information Services.

UN country code (2 digits),

UN Location code (3 digits, "XXX" if not available),

Fairway section number (5 alphanumerical digits, to be determined by the national authority; a side branch should have its own section number, when there are special restrictions, e.g. bridges),

Object Reference Code (5 alphanumerical digits, "00000" if not available),

Fairway section hectometre (5 numerical digits, hectometre at the center of the area or "00000" if not available).

If the ISRS Location Code is not available, the code of the Noordersoft RIS-Index may be used.

I. Legal ECDIS (refers to Section U)

Category attributes for ship types, ship formations and cargo type are available. These categories are used to describe for which type of ship, convoy, or cargo the particular regulation is valid. There are two ways of describing which categories are affected by the rule:

- 1. explicit selection
- 2. implicit selection

The attributes for explicit type selection are used to explicitly select the types from the given list. The attributes for implicit type selection are is used to select those types that are not affected.

It is up to the encoder if the explicit attribute or its implicit version is used. However, it is **not allowed** to use both attributes when defining the category of a law content object.

One would make use of implicit type selection if for example the respective regulation states which types are excluded from the regulation rather than explicitly listing those types that are affected.

Example: "recreational crafts are excluded from a speed limit."

J. <u>Dates</u>

When encoding dates using the attributes DATEND, DATSTA, PEREND, PERSTA, SORDAT, SUREND and SURSTA, and no specific year, month or day is required, the following values must apply in conformance to ISO 8601:1988.

- No specific year required, same day each year: --MMDD
- No specific year required, same month each year: --MM
- No specific day required: CCYYMM
- No specific month required: CCYY

Notes: CCYY = calendar year; MM = month; DD = day.

In the first two values, the dashes (--) must be included.

Where the temporal attributes DATEND, DATSTA, PEREND or PERSTA have been encoded for any object that is the master component of a master/slave relationship, all other component objects within the relationship must not extend beyond the temporal attribute values encoded.

Seasonal Objects: If it is required to show seasonality of objects, it must be done using the attribute STATUS = 5

ES-RIS 2025/1 - Annex 1 - Appendix 2 (periodic/intermittent). If it is required to encode the start and/or end dates of the season, this must be done using the attributes PERSTA and PEREND.

K. Collection Features Extending Beyond Cell Boundaries

If a collection feature extends beyond a cell boundary (i.e. the features that make up the collection are spread over multiple cells), the collection feature should be repeated in each cell that contains one or more component features. However, only the features that exist in the cell that contains the instance of the collection feature can be referenced by that collection feature. If this technique is used, each instance of the original collection feature must have the same feature identifier (LNAM). It is up to the application (e.g. the Inland ECDIS or ECS) that uses the cells to rebuild the complete collection feature based on the unique feature identifier.

C.1 Meta Features

C.1.1 Data Coverage (M)

A geographical area that describes the coverage and extent of the spatial objects. (S-57 Standard)

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization M_COVR (CATCOV = 1)	All spatial objects in an IENC must be covered by a M_COVR, CATCOV=1 (coverage available) area object. B) US & RU: The use of CATCOV=2 (no coverage available) is required C) EU: The use of CATCOV=2 is optional	Object Encoding Object Class = M_COVR(A) (M) CATCOV = [1 (coverage available), 2 (no coverage available)] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

C.1 Meta Features

C.1.2 Data Quality (C)

An area within which a uniform assessment of the quality of the data exists. (S-57 Standard)

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization (for CATZOC=6)	 A) The M_QUAL polygons should only cover those areas that contain IENC data. B) EU: M_QUAL is not used. C) US: Refer to ZOC table below for a description of categories. D) RU: Currently all IENCs are coded with CATZOC=1 	Object Class = M_QUAL(A) (O) CATZOC = [1 (zone of confidence A1), 2 (zone of confidence A2), 3 (zone of confidence B), 4 (zone of confidence C), 5 (zone of confidence D), 6 (zone of confidence U (data not assessed))] (O) TECSOU = [1 (found by echo-sounder), 2 (found by side-scan-sonar), 3 (found by multibeam), 4 (found by diver), 5 (found by leadline), 6 (swept by wire-drag), 7 (found by laser), 8 (swept by vertical acoustic system), 9 (found by electromagnetic sensor), 10 (photogrammetry), 11 (satellite imagery), 12 (found by levelling), 13 (swept by side-scansonar), 14 (computer generated)] (O) SOUACC = [x.xx] The best estimate of the accuracy of the sounding data. Minimum value: 0; Resolution: 0.01 m (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

ES-RIS 2025/1 - Annex 1 - Appendix 2 Zone of Confidence (ZOC) Table

1	2		3	4	5

D	worse than ZOC C	worse than ZOC C		Full seafloor coverage not achieved, large depth anomalies may be expected.	Poor quality data or data that cannot be quality asses- sed due to lack of information.

Note: The CATZOC attribute definitions are currently the subject of review and the results of this review will be promulgated as soon as possible in the S-57 Corrections Document.

To decide on a ZOC Category, all conditions outlined in columns 2 to 4 of the tables must be met.

Footnote numbers quoted in the table have the following meanings:

- The allocation of a ZOC indicates that particular data meets minimum criteria for position and depth accuracy and seafloor coverage defined in this Table. Data may be further qualified by Object Class Quality of Data (M_QUAL) sub-attributes as follows:
 - a. Positional Accuracy (POSACC) and Sounding Accuracy (SOUACC) may be used to indicate that a higher position or depth accuracy has been achieved than defined in this Table (e.g. a survey where full seafloor coverage was not achieved could not be classified higher than ZOC B; however, if the positional accuracy was, for instance, 15 metres, the sub-attribute POSACC could be used to indicate this).
 - b. Swept areas where the clearance depth is accurately known but the actual seabed depth is not accurately known may be accorded a higher ZOC (i.e. A1 or A2) providing positional and depth accuracies of the swept depth meets the criteria in this Table. In this instance, Depth Range Value 1 (DRVAL1) may be used to specify the swept depth. The position accuracy criteria apply to the boundaries of swept areas.
 - c. SURSTA, SUREND and TECOU may be used to indicate the start and end dates of the survey and the technique of sounding measurement.
- Position Accuracy of depicted soundings at 95% CI (2.45 sigma) with respect to the given datum. It is the cumulative error and includes survey, transformation and digitizing errors, etc. Position accuracy need not be rigorously computed for ZOCs B, C, and D but may be estimated based on type of equipment, calibration regime, historical accuracy, etc.
- Depth accuracy of depicted soundings = a + (B%d) / 100 at 95% CI (2.00 sigma), where d = depth in metres at the critical depth. Depth accuracy need not be rigorously computed for ZOCs B, C and D but may be estimated based on type of equipment, calibration regime, historical accuracy, etc.
- ⁴ Significant seafloor features are defined as those rising above depicted depths by more than:

	<u>Depth</u>	Significant Feature
a.	<10 metres	>0.1% depth,
b.	10 to 30 metres	>1.0 metre,
C.	>30 metres	>(0.1% depth) minus 2.0 metres

Controlled, systematic (high accuracy) survey (ZOC A1, A2, and B) – a survey comprising planned survey lines on a geodetic datum that can be transformed to WGS 84.

Position fixing (ZOC A1) must be strong with at least three high quality Lines of Position (LOP) or Differential GPS.

Modern survey echosounder – a high precision surveying depth measuring equipment, generally including all survey echosounders designed post 1970.

C.1 Meta Features

C.1.3 Navigation System of Marks (M)

An area within which a specific system of navigational marks applies and/or a common direction of buoyage. (S-57 Standard)

Graphics	Encoding Instructions	Object Encoding	
IENC Symbolization (Direction of Buoyage)	The m_nsys polygons should only cover those areas that contain IENC data.	Object Class = m_nsys(A)	
~ \ \ \ \	B) m_nsys areas may not overlap.	(M) marsys = [1 (IALA A), 2 (IALA B), 9 (no system), 10 (other system), 11 (CEVNI), 12	
53	C) US: All inland waterways in the United States use IALA B.	(Russian inland waterway regulations), 13 (Brazilian national inland waterway	
0	D) EU: In areas with mixed systems (IALA-A and CEVNI) code marsys according to majority of marks and code individual deviant marks at	regulations - two sides), 14 (Brazilian nationa inland waterway regulations - side independent), 15 (Paraguay-Parana waterway - Brazilian complementary aids)]	
	object level to the appropriate system.	(C) ORIENT = [xxx.xx or "unknown"] (degree (°)), e.g., 110.76	
	E) RU: All inland waterways in Russia	(C) SORDAT = [YYYYMMDD]	
	use marsys = 12 (Russian inland waterway regulations).	(C) SORIND = (Refer to Section B, General Guidance)	
	F) BR: There are two systems in Brazilian national inland waterways marsys = 13 (Brazilian national inland waterway regulations - two sides) and marsys = 14 (Brazilian national inland waterway regulations - side independent). In areas with mixed systems (IALA B and one above) use marsys = 2 (IALA B) and code individual deviant marks to the appropriate system (marsys = 13 or 14).		
	G) BR: Paraguai-Parana International Waterway: In Brazilian extent, use marsys= 2 (IALA B) and code Brazilian complementary aids with marsys = 15 (Paraguai-Parana waterway - Brazilian complementary aids).	,	
	 EU: To encode the local direction of buoyage for waterways without a defined direction, for example intertidal creeks, ORIENT should be encoded. 		
	EU: For bendy intertidal creeks it may be necessary to encode several m_nsys features with appropriate ORIENT values to ensure that the displayed arrow aligns with creek axis.		

C.1 Meta Features

C.1.4 Sounding Datum (O)

A geographical area of uniform sounding datum. (S-57 Standard)

	· · · · · · · · · · · · · · · · · · ·	
Graphics	Encoding Instructions	Object Encoding
	 A) If the sounding datum is different than the value given in the SDAT subfield of the "Data set parameter" [DSPM] field for some part of the data set, it must be encoded as meta object 'm_sdat'. B) The areas covered by these meta objects must be mutually exclusive. C) Depth contours and depth areas going across areas which have different values of vertical datum, must be divided into several objects at the border of these areas. D) The sounding datum must be constant over large areas. It applies to the attributes VALSOU, DRVAL1, DRVAL2 and VALDCO. 	Object Class = m_sdat(A) (M) verdat = [12 (Mean lower low water), 23 (Lowest astronomical tide), 24 (Local datum), 30 (Highest astronomical tide), 31 (Local low water reference level), 32 (Local high water reference level), 33 (Local mean water reference level), 34 (Equivalent height of water (German GlW)), 35 (Highest Shipping Height of Water (German HSW)), 36 (Reference low water level according to Danube Commission), 37 (Highest shipping height of water according to Danube Commission), 38 (Dutch river low water reference level (OLR)), 39 (Russian project water level), 40 (Russian normal backwater level), 41 (Ohio River Datum), 42 (Approximate LAT), 43 (Dutch High Water Reference Level (MHW)), 45 (Dutch estuary low water reference level (OLW))] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

C.1 Meta Features

C.1.5 Vertical Datum (O)

A geographical area of uniform vertical datum. (S-57 Standard)

	<u> </u>		
Graphics	Encoding Instructions	Object Encoding	
	 A) If the vertical datum is different to the value given in the VDAT subfield of the "Data set parameter" [DSPM] field for some part of the data set, it must be encoded as meta object 'm_vdat'. B) The areas covered by these meta objects must be mutually exclusive. C) Height contours, going across areas, that have different values of vertical datum, must be divided into several objects at the border of these areas. D) The vertical datum must be constant over large areas. It applies to the attributes ELEVAT, HEIGHT, VERCCL, VERCLR and VERCOP. 	Object Class = m_vdat(A) (M) verdat = [12 (Mean lower low water), 23 (Lowest astronomical tide), 24 (Local datum), 30 (Highest astronomical tide), 31 (Local low water reference level), 32 (Local high water reference level), 33 (Local mean water reference level), 34 (Equivalent height of water (German GlW)), 35 (Highest Shipping Height of Water (German HSW)), 36 (Reference low water level according to Danube Commission), 37 (Highest shipping height of water according to Danube Commission), 38 (Dutch river low water reference level (OLR)), 39 (Russian project water level), 40 (Russian normal backwater level), 41 (Ohio River Datum), 42 (Approximate LAT), 43 (Dutch High Water Reference Level (MHW)), 45 (Dutch estuary low water reference level (OLW))] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)	

C.1 Meta Features

C.1.6 Quality of Data for Detailed Depth Information (O)

An area within which a uniform assessment of the quality of the data exists. Distinction: accuracy of data; Survey reliability (S-57 Standard)

Graphics	Encoding Instructions	Object Encoding
	A) The quality of data for soundings is only given in those areas where detailed depth information is provided. The area object shares the geometry with those areas. B) TECSOU has to be used to give the technique of the sounding measurement. C) SOUACC should be used to give information about the accuracy of the sounding data. D) POSACC should be used to give information about the accuracy of a position.	Object Class = M_QUAL(A) (M) TECSOU = [1 (found by echo-sounder), 2 (found by side-scan-sonar), 3 (found by multibeam), 4 (found by diver), 5 (found by leadline), 6 (swept by wire-drag), 7 (found by laser), 8 (swept by vertical acoustic system), 9 (found by electromagnetic sensor), 10 (photogrammetry), 11 (satellite imagery), 12 (found by levelling), 13 (swept by side-scansonar), 14 (computer generated)] (O) SOUACC = [x.xx] The best estimate of the accuracy of the sounding data. Minimum value: 0; Resolution: 0.01 m (O) POSACC = [xxx.x] (metres), The best estimate of the accuracy of a position. Minimum value: 0; Resolution: 0.1 m (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

C.1 Meta Features

C.1.7 Survey Reliability for Detailed Depth Information (O)

An area within which a uniform assessment of the reliability of source survey information exists. Distinction: accuracy of data; quality of data (S-57 Standard)

Distinction: accuracy of data; quality of data (S-57 Standard)				
Graphics	Encoding Instructions	Object Encoding		
	A) The survey reliability for soundings is only given in those areas where detailed depth information is provided. The area object shares the geometry with those areas.	Object Encoding Object Class = M_SREL(A) (M) QUASOU = [1 (depth known), 2 (depth unknown), 8 (value reported (not surveyed)),		
	B) The quality of sounding must not be encoded using QUASOU on the depth geo object, unless it is different to the value of QUASOU encoded on M_SREL.	10 (maintained depth), 11 (not regularly maintained)] (C) QUAPOS = [10 (precisely known)] (M) SURATH = (Name of the surveying authority: e.g., "Wasser- und Schifffahrtsamt		
	C) QUASOU = 1 (depth known) has to be used if the depth is known and shown via depth areas.	Bingen") (M) SUREND = [CCYYMMDD (full date), CCYYMM (no specific day required)]		
	D) QUASOU = 2 (depth unknown) is used as an object attribute only in combination with depth areas (not with M_SREL!) for those areas in the river, which are too shallow for being surveyed by surveying boats and hence no detailed data is available (see I.1.9 Unsurveyed Area).	(M) SURSTA = [CCYYMMDD (full date), CCYYMM (no specific day required)] (C) SURTYP = [2 (controlled survey)] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)		
	E) QUASOU = 8 (value reported (not surveyed)) shall be used as an object attribute only in combination with depth areas (not with M_SREL) especially in cases when parts of the navigable water area are not surveyed but may be deep enough for navigation due to reports from other organisations than the waterways administration (see I.1.9 Unsurveyed Area).			
	F) QUASOU = 10 (maintained depth) or QUASOU = 11 (depth not regularly maintained) should be used as on object attribute only in combination with DEPARE – Fairway Depth (not with M_SREL) to indicate the maintenance (see I.1.5 Fairway Depth / Project Depth).			
	G) QUAPOS = 10 (precisely known) has to be used if the positioning during the survey is done by differential GPS signals.			
	H) SURATH has to be used to give			

ES-RIS 2025/1 - Annex 1 - Appendix 2 name of the surveying authority. SUREND and SURSTA have to be I) used to encode the period of the survey. Quotation: "If the attributes J) SOUACC and TECSOU are required, they must be encoded on either the meta object M QUAL or on individual geo objects (e.g., SOUNDG)." (see C.1.6 Quality of Data) SURTYP = 2 (controlled survey) K) has to be used if a thorough survey has been done, usually conducted with reference to guidelines (a quality assured survey).

C - IENC Meta Information

C.1 Meta Features

C.1.8 Nautical Publication Information (O)

Used to relate additional nautical information or publications to the data

Graphics	Encoding Instructions	Object Encoding
	A) US & RU: The M_NPUB polygons should only cover those areas that contain IENC data. B) US: TXTDSC shall be used to relate all information pertinent to the chart as printed in Section VII of the US Coast Guard's Local Notice to Mariners (LNM). Format of TXTDSC name should be U3UM819NP1.TXT where U3 = Agency, UM819 = River Cell, NP = Nautical Publication (NP), 1 = NP number.	Object Encoding Object Class = M_NPUB(A) (M) TXTDSC = (Refer to letter B) (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

C - IENC Meta Information

C.1 Meta Features

C.1.9 Quality of Non-bathymetric Data (O)

QUALITY OF NON-BATHYMETRIC DATA. An area within which the best estimate of the overall uncertainty of the data is uniform. The overall uncertainty takes into account for example the source accuracy, chart scale, digitising accuracy etc.

Graphics	Encoding Instructions	Object Encoding
	A) The meta feature Quality of Non-bathymetric Data may be used to provide an indication of the overall uncertainty of position for all non-bathymetric features. It must not be used to provide the uncertainty of bathymetric information.	Object Encoding Object Class = M_ACCY(A) (M) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)] (O) HORACC = [xx.xx] (metres), e.g., 1.54
	B) The attribute positional uncertainty (POSACC) may be applied to any spatial type, in order to qualify the location of a feature.	(O) VERACC = [xx.xx] (metres), e.g., 1.54 (M) POSACC = [xxx.xx] (metres) (O) SOUACC = [xxx.xx] (metres)
	C) Positional uncertainty must not be applied to the spatial type of any geo feature if it is identical to the positional uncertainty values of the underlying meta feature.	(O) INFORM = (Additional Information) (O) NINFOM = (Refer to Section B, General Guidance) (C) TXTDSC = (Refer to letter G)
	D) Positional uncertainty on the Quality of Non-bathymetric Data applies to non-bathymetric data situated within the area, while positional uncertainty on the associated spatial types qualifies the location of the Quality of Non-bathymetric Data feature itself.	(O) NTXTDS = (Refer to Section B, General Guidance) (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)
	E) Meta features Quality of Non- bathymetric Data and Quality of Bathymetric Data should not overlap.	
	F) The accuracy of data is only encoded in areas where accuracy of data is available and clearly defined.	
	G) If a structured external XML-file with more detailed accuracy information is available, the reference to the file has to be entered in the TXTDSC attribute.	

ES-RIS 2025/1 - Annex 1 - Appendix 2

D - Natural Features

D.1 Hydrology

D.1.1 Canal (non-navigable) (O)

These are artificial tributaries of the main waterway.

Graphics	Encoding Instructions	Object Encoding
	CANALS of type area should be coded on LNDARE objects. A CANALS object may not share the same geospatial position and geometry as a SEAARE object. Canals that can be used for navigation by e.g. pleasure craft should be encoded as DEPARE, depare or UNSARE.	Object Encoding Object Class = CANALS(L,A) (O) OBJNAM = [Canal name] (O) NOBJNM = (Refer to Section B, General Guidance) (M) SCAMIN = [45000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

D.1 Hydrology

D.1.2 Rivers (non-navigable) (O)

Mainly free flowing water courses that are typically tributaries of the main waterway.

Graphics	Encoding Instructions	Object Encoding
Real World Chart Symbol IENC Symbolization	A) RIVERS of type area should be coded on LNDARE objects. B) Area features should not extend into line features as the river narrows; end where area designation ends. C) Rivers that can be used for navigation by e.g. pleasure craft should be encoded as DEPARE, depare or UNSARE.	Object Class = RIVERS(L,A) (O) OBJNAM = [River Name] (O) NOBJNM = (Refer to Section B, General Guidance) (M) SCAMIN = [EU: 45000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

D.1 Hydrology

D.1.3 Named Water Area (O)

A geographically defined part of navigable waters. It may be specified within its limits by its proper name.

Graphics	Encoding Instructions	Object Encoding
Chart Symbol Crand Rivers Light 24 SG(U) SG(U) SG(U) IENC Symbolization Tennessee River	 A) For river or canal names, place the point object at or near confluences where a label is needed to distinguish adjoining waterways. B) An area object may be used if its usage will aid in reducing clutter. C) SEAARE area is mandatory only at confluences of two waterways up to 2 kilometres from the confluence. D) Use SEAARE (P) to display the name only at the location where the point was placed. A point object should be used if the point is always on the display when it is relevant. Use SEAARE (A) if display of name is desired along water area's entire expanse. 	Object Class = SEAARE(P,A) (M) OBJNAM = [Water Area Name] (O) NOBJNM = (Refer to Section B, General Guidance) (O) CATSEA = [5 (bay), 12 (narrows), 13 (shoal), 51 (canal), 52 (lake), 53 (river), 54 (reach), 57 (chute), 58 (backwater/slough), 59 (bend)] (M) SCAMIN = [EU: 45000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

D.1 Hydrology

D.1.4 Dredging Lake (O)

A body of water mostly surrounded by land, from which sand or gravel is dredged.

Graphics	Encoding Instructions	Object Encoding
Real World IENC Symbolization	A) Lakes that are navigable at compilation scale should be covered by a DEPARE (see I.1.1, Detailed Depth - ref. to one water level) or 'depare' (see I.1.2, Detailed Depth - water level model) B) Dredging lakes connected to the waterway should be covered by a DEPARE or 'depare' with an appropriate QUASOU coding. C) If water depth is not surveyed, but only known from experience by visiting vessels, QUASOU = 2 or 8 should be used (see also I.1.9, Unsurveyed Area). D) Lakes that are not navigable at compilation scale have to be encoded as LAKARE (see D.1.5)	Object Class = DEPARE(A) (M) DRVAL1 = [x.xx] (metres), e.g., 2.74 or "unknown" (M) DRVAL2 = Maximum known depth of depth area: [xx.xx] (metres) or "unknown" (C) QUASOU = [2 (depth unknown), 8 (value reported (not surveyed))] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance) Object Class = depare(A) (M) DRVAL1 = [x.xx] (metres), e.g., 2.74 or "unknown" (M) DRVAL2 = Maximum known depth of depth area: [xx.xx] (metres) or "unknown" (C) eleva1 = Maximum elevation 1 of a depth area: [xx.x] (metres) or "unknown" (C) eleva2 = Minimum elevation 2 of a depth area: [xx.x] (metres) or "unknown" (M) wtwdis = [xxxx.xxx] (units defined in hunits), e.g., 2451.732 (M) hunits = [3 (kilometres), 4 (hectometres), 5 (statute miles), 6 (nautical miles)] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

D.1 Hydrology

D.1.5 Lake (O)

A large body of water entirely surrounded by land. (IHO Dictionary, S-32, 5th Edition, 2629)

Graphics	Encoding Instructions	Object Encoding
Chart Symbol IENC Symbolization	A) Lakes not navigable at compilation scale are encoded by LAKARE on LNDARE object(s). G.3.2 Bunker / Fueling Station (O)

A station, at which a vessel is able to bunker fuel, water or ballast (Inland ECDIS Standard)

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	 A) Use INFORM attribute just in case important information, which is not already encoded, has to be provided to skippers. B) The attribute "Category of bunker vessel" (catbun) is of LIST type and hence more than one value may be chosen. C) If the bunker/fuelling station has a special time schedule or special operating hours apply, the object can be combined with a time schedule. For this purpose please refer to the time schedule (general) object 'tisdge' (T.1.1) D) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the TXTDSC attribute. E) The object can be used as area object, for example when the station is on a pontoon. In that case the pontoon has only to be coded separately, if no depth data is available underneath. F) If the ISRS Location Code is available it has to be encoded (refer to General Guidance section H). 	Object Class = bunsta(P,A) (O) catbun = [1 (diesel oil), 2 (water), 3 (ballast)] (O) OBJNAM = [name and/or operator/owner] (O) NOBJNM = (Refer to Section B, General Guidance) (M) bunves = [1 (bunker vessel available), 2 (no bunker vessel available)] (O) TXTDSC = (Refer to letter D) (C) unlocd = [ISRS Location Code] (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)] (M) SCAMIN = [22000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

G.3 Installations

G.3.3 Conveyor (C)

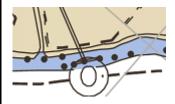

A mechanical apparatus for moving bulk material or people from place to place (as by a moving belt or chain of receptacles); usually extends from a land-based facility over the shoreline to a dock, wharf, or mooring facility. (Adapted from S-57 Standard)

Real World

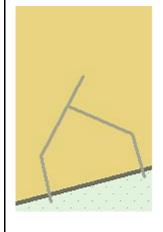

Graphics

Chart Symbol

IENC Symbolization

Encoding Instructions

- A) Place line feature from land-based facility to fixed structure in water at which product loads or offloads.
- Supporting structures (e.g., pylons, piers) should be coded when in the water.
- C) If the vertical clearance is referred to an inland waterway specific reference level, the object 'convyr' shall be used.
- If a conveyor extends over navigable water it has to be encoded.
- E) Use 'vcrlev' and 'vcrval' if the local value and name of vertical river datum reference level (design waterlevel) is known.

- (C) meanam = Name of water level, which is used for the attribute meawat (value at relevant mean water level) including version identification, for example year of issue or period, e.g., HSW 96
- (C) othnam = (name of water level, which is used for the attribute othwat (value at other locally relevant water level) including version identification, for example year of issue or period) (e.g., HQ100-96)
- (C) ORIENT = [xxx.xx or "unknown"] (degree (°)), e.g., 110.76
- (M) SCAMIN = [18000]
- (C) SORDAT = [YYYYMMDD]
- (C) SORIND = (Refer to Section B, General Guidance)

H - Currents and Tides

H.1 Currents

H.1.2 Water Turbulence (O)

The disturbance of water caused by the interaction of any combination of waves, currents, tidal streams, wind, shoal patches and obstructions.

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	A) Water power supplies are producing water turbulences under water at a	Object Encoding Object Class = WATTUR(D.A)
© ©	place where the vessels enter the locks.	Object Class = WATTUR(P,A) (M) CATWAT = [6 (under water turbulence)] (O) OBJNAM = [Name of object] (O) NOBJNM = (Refer to Section B, General Guidance) (M) SCAMIN = [22000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

H - Currents and Tides

H.2 Tides

H.2.1 Tide stream - flood/ebb (O)

The alternating horizontal movement of water associated with the rise and fall of the tide caused by tide-producing forces. Also called tidal current

called tidal current.			
Graphics	Encoding Instructions	Object Encoding	
Chart Symbolization Jene Symbolization Plood stream, rate at spring tides Current or tidal stream whose direction is not known Boundary of an area for which there is tidal information Lebb stream, rate at spring tides Current or tidal stream whose direction is not known Boundary of an area for which there is tidal information Boundary of an area for which there is tidal information	A) The term "tidal streams" (French: "courants de mare", US usage: "tidal currents"), is used to designate the periodical horizontal movements of the water, which are astronomical in origin. These are distinguished from "currents" (French: "courants généraux"), which are not dependent on astronomical conditions. In practice the navigator experiences a combination of tidal stream and current. Tidal streams are defined by the direction towards which they flow. The terms "flood stream" and "ebb stream" are used for designating the horizontal movement of the water when the tide is respectively rising or falling. To avoid any ambiguity, in the case of streams which do not turn at about the time of local high or low water, an indication must be given of the direction towards which the stream flows. B) Where data are inadequate for tabulated information (Tide Stream Panel Data), or where otherwise required, single observations comprising flood and ebb directions and/or rates, preferably corresponding to maximum rates at the spring tide, should be encoded. If it is required to encode tidal stream information that is limited to flood and ebb directions and/or values, it must be done using the feature Tide Stream – Flood/Ebb. C) Maximum rates (velocities) of tidal streams during springs, where known, must be encoded in knots using the attribute current velocity, and should be quoted to one decimal place. In rivers and estuaries where there are permanent currents caused by the flow of river water, such currents must be included in the calculation of the rate. Where the velocity of the	Object Encoding Object Class = TS_FEB(P,A) (M) CAT_TS = [1 (flood stream), 2 (ebb stream), 3 (other tidal flow)] (O) CURVEL = [xx.x] (O) ORIENT = [xxx.xx or "unknown"] (degree (°)), e.g., 110.76 (M) SCAMIN = [22000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)	

ES-RIS 2025/1 - Annex 1 - Appendix 2		
	current in a river or estuary is so variable as to make it impractical to indicate a value, current velocity should be populated with an empty (null) value.	

I.1 Depths in Fairways and Areas

I.1.1 Detailed Depth - referenced to one water level (C)

Detailed depth information (area) – referred to one reference water level only: Water area within the waterway whose detailed depth information is within a defined range of values that refer to only one vertical datum, the reference water level.

depth information is within a defined range of values that refer to only one vertical datum, the reference water level.			
Graphics	Encoding Instructions	Object Encoding	
IENC Symbolization	A) The reference water level is only provided in the cell header (field: DSPM, subfield SDAT) or in 'm_sdat' plus 'verdat', if applicable (e.g., within a cell where two rivers with different reference water levels meet). verdat on incividual objects related to depth is prohibited.	Object Encoding Object Class = DEPARE(A) (M) DRVAL1 = [x.xx] (metres), e.g., 2.74 or "unknown" (M) DRVAL2 = Maximum known depth of depth area: [xx.xx] (metres) or "unknown"	
	B) If the area is bounded by two or more depth contours: DRVAL2 takes the value of the deepest depth contour bounding the area. DRVAL1 takes the value of the shallowest depth contour bounding the area.	 (C) QUASOU = [2 (depth unknown), 8 (value reported (not surveyed))] (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)] 	
	C) If the shallowest depth of an unsurveyed area near the shore is defined by the river bank and the position of the riverbank is not exactly known, DRVAL1 = height of the riverbank above sounding/vertical datum, normally it is "unknown". DRVAL2 takes the value of the deepest depth contour bounding the area. QUASOU has to be encoded (see C.1.7 and I.1.9).	(C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)	
	D) If the shallowest depth of an unsurveyed area near the shore is defined by the river bank and the position of the river bank is exactly known, DRVAL1 = "0". DRVAL2 takes the value of the deepest depth contour bounding the area. Drying areas have to be encoded according to I.1.6 (low/high water range) QUASOU has to be encoded (see C.1.7 and I.1.9).		
	E) If the area is bounded by only one depth contour and it is a hole: DRVAL1 takes the value of the depth contour shown. DRVAL2 takes the value of the deepest sounding within the depth contour if this is known. If one doesn't know how deep the hole reaches (which is normal) DRVAL2 is "unknown". F) If the area is bounded by only one depth contour and it is a peak:		

	DRVAL2 takes the value of the depth contour shown. DRVAL1 takes the value of the sounding within the depth contour if this is known. If one doesn't know how high the peak reaches DRVAL1 is "unknown".	
G)	Shallow depth areas with a diameter less than 10 m have to be encoded additionally as underwater rock, wreck or obstruction (see J.1.1 Rocks, J.2.1 Wrecks or J.3.1 Obstructions).	
H)	All navigable water bodies shall be covered by either DEPARE, depare, DRGARE or UNSARE (Group 1) objects using one of the options mentioned in I.1.1 to I.1.9.	

I.1 Depths in Fairways and Areas

I.1.2 Detailed Depth - water level model (C)

Detailed depth information (area) – a water level model that is applied to depth areas

A water area within the waterway in which detailed depth information is known within a defined range of values referenced to a vertical datum (the reference water level). The actual water level is provided by a water level model.

a vertical datum (the reference water leve). The actual water level is provided by a water level model.			
Graphics	Encoding Instructions	Object Encoding	
IENC Symbolization	 A) The following encoding instructions must only be followed if a water level model shall be applied to the depth areas. B) The reference water level is only provided in the cell header (field: DSPM, subfield SDAT) or in 'm_sdat' plus 'verdat', if applicable (e.g. within a cell where two rivers with different reference water levels meet). 'verdat' on individual objects related to depth is prohibited. C) Cut the depth areas at defined waterway profiles in order to be able to assign a waterway distance to the depth area. D) If the area is bounded by two or more depth contours: DRVAL2 takes the value of the deepest depth contour bounding the area. E) If the shallowest depth of an unsurveyed area near the shore is defined by the river bank and the position of the riverbank is not exactly known, DRVAL1 = height of the riverbank above sounding/vertical datum, normally it is "unknown". DRVAL2 takes the value of the deepest depth contour bounding the area. QUASOU has to be encoded (see C.1.7 and I.1.9). F) If the shallowest depth of an unsurveyed area near the shore is defined by the river bank and the position of the river bank and the position of the river bank as exactly known, DRVAL1 = "0". DRVAL2 takes the value of the deepest depth contour bounding the area. Drying areas have to be encoded according to I.1.6 (low/high water range). QUASOU has to be encoded (see C.1.7 and I.1.9). 	Object Class = depare(A) (M) DRVAL1 = [x.xx] (metres), e.g., 2.74 or "unknown" (M) DRVAL2 = Maximum known depth of depth area: [xx.xx] (metres) or "unknown" (C) eleva1 = Maximum elevation 1 of a depth area: [xx.x] (metres) or "unknown" (C) eleva2 = Minimum elevation 2 of a depth area: [xx.x] (metres) or "unknown" (M) wtwdis = [xxxx.x] (units defined in hunits), e.g., 2451.7 (M) hunits = [3 (kilometres), 4 (hectometres), 5 (statute miles), 6 (nautical miles)] (C) QUASOU = [2 (depth unknown), 8 (value reported (not surveyed))] (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)	

ES-RIS 2025/1 - Annex 1 - Appendix 2

- G) If the area is bounded by only one depth contour and it is a hole: DRVAL1 takes the value of the depth contour shown. DRVAL2 takes the value of the deepest sounding within the depth contour if this is known. If one doesn't know how deep the hole reaches (which is normal) DRVAL2 is "unknown".
- H) If the area is bounded by only one depth contour and it is a peak:
 DRVAL2 takes the value of the depth contour shown. DRVAL1 takes the value of the shoalest sounding within the depth contour if this is known. If one doesn't know how high the peak reaches DRVAL1 is "unknown".
- I) Add the object attribute 'eleva1' which is corresponding to DRVAL1, if it is needed for the water level model. 'eleva1' is used to define the maximum elevation of the bottom of a river referred to a gravitational reference level (reflev).
- J) Add the object attribute 'eleva2' which is corresponding to DRVAL2, if it is needed for the water level model. 'eleva2' is used to define the minimum elevation of the bottom of a river referred to a gravitational reference level (reflev).
- K) Add the object attribute 'wtwdis' with the value of the waterway distance of the downstream situated waterway profile. Do this in order to calculate the values for 'eleva1' and 'eleva2' automatically out of DRVAL1 and DRVAL2 (which are referred to the reference water level whose height above the gravitational reference level (reflev) is stored in the object attribute HEIGHT of the downstream situated object 'wtwprf'). (See waterway profile I.3.5)
- L) If the actual water level, that is provided by a water level model, is also referred to the same gravitational reference level, one can link the depth areas with the actual water level using 'eleva1' and 'eleva2'.
- M) Shallow depth areas with a diameter less than 10 m have to be encoded additionally as underwater rock, wreck or obstruction (see J.1.1 Rocks, J.2.1 Wrecks or J.3.1 Obstructions).

ES-RIS 2025/1 - Annex 1 - Appendix 2			
N)	All navigable water bodies shall be covered by either DEPARE, depare, DRGARE or UNSARE (Group 1) objects using one of the options mentioned in I.1.1 to I.1.9.		

I.1 Depths in Fairways and Areas

I.1.3 Dredged Area (C)

An area of the bottom of a body of water that has been deepened by dredging. (IHO Dictionary, S-32, 5th Edition, 1462)

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	A) All navigable water bodies shall be covered by either DEPARE, depare, DRGARE or UNSARE (Group 1) objects using one of the options mentioned in I.1.1 to I.1.9.	Object Encoding Object Class = DRGARE(A) (M) DRVAL1 = [x.xx] (metres), e.g., 2.74 or "unknown" (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

I.1 Depths in Fairways and Areas

I.1.4 Fairway (C)

Part of the navigable waterway area where a certain water depth within a certain width is available for the continuous navigation.

That part of a river, harbor and so on, where the main navigable channel for vessels of larger size lies. It is also the usual course followed by vessels entering or leaving harbors, called "ship channel". (International Maritime Dictionary, 2nd Ed.)

(International Maritime Dictionary, 2nd Ed.)			
Graphics	Encoding Instructions	Object Encoding	
IENC Symbolization IENC Symbolization	 A) The fairway has to be encoded if there is one. B) A publication is only allowed if the competent authority has verified its location. C) The fairway must be covered by depth areas. D) DRVAL1 of the FAIRWY object class should not be used, because 'verdat' is not available, instead depth areas shall be used in addition to FAIRWY (refer to I.1.5 Fairway Depth / Project Depth) E) If no detailed bathymetry is available, the fairway shares the geometry of a depth area with 	Object Encoding Object Class = FAIRWY(A) (M) SCAMIN = [90000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)	
	geometry of a depth area with DRVAL1 = official water depth in metres issued by the competent authority (DRVAL2 = "unknown"); please refer to I.1.5 Fairway Depth/Project Depth F) If no detailed bathymetry is available, on each side of the fairway there must be a depth area between the shoreline and the boundary of the fairway with DRVAL1 = 0 or "unknown" and DRVAL2 = official water depth in metres issued by the competent authority; please refer to I.1.5 Fairway Depth/Project Depth) G) If there is a fairway separation with a one-way regulation a two-way route part (refer to L.1.3 - Two-way Route Part) has to be encoded.		

I.1 Depths in Fairways and Areas

I.1.5 Fairway Depth / Project Depth (C)

Area within the waterway that is delimited by the boundaries of the navigable channel and denotes the designated area with an official water depth for the continuous navigation. It depends on the legal status of the navigable channel if this depth is maintained regularly or not

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	A) This coding method for depth is only a minimum requirement for displaying the official water depth of the fairway that is available for the continuous navigation. If more detailed depth information is available use I.1.1 "Detailed Depth – ref. to one reference water level "or I.1.2 "Det. Depth - water level model". B) The depth area shares the geometry of the fairway with value 1 of the depth range (DRVAL1) = official water depth in metres issued by the competent authority. The	Object Encoding Object Class = DEPARE(A) (M) DRVAL1 = [x.xx] (metres), e.g., 2.74 or "unknown" (M) DRVAL2 = Maximum known depth of depth area: [xx.xx] (metres) or "unknown" (C) QUASOU = (Refer to letter G) (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)]
	value 2 of the depth range (DRVAL2) has to be set to "unknown".	(C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)
	C) US: DRVAL1 = 2.7 (equivalent to typical project depths for vast majority of shallow draft projects) and DRVAL2 = "unknown" if value is not known.	
	D) US: A Shallow Depth area or unsurveyed area must form the boundary between the Project Depth and the land, unless DEPARE is within the lock chamber.	
	E) EU: On each side of the fairway there must be a depth area between the shoreline and the boundary of the fairway with DRVAL1 = "unknown" and DRVAL2 = official water depth in metres issued by the competent authority.	
	F) The reference water level is only provided in the cell header (field: DSPM, subfield SDAT) or in m_sdat plus verdat, if applicable (e.g., within a cell where two rivers with different reference water levels meet). verdat on individual objects related to depth is prohibited.	
	G) EU: QUASOU = 10 (maintained depth) or QUASOU = 11 (depth not regularly maintained) should be	

ES-RIS 2025/1 - Annex 1 - Appendix 2			
	used to indicate the reliability of the depth information due to the legal status of the fairway. H) All navigable water bodies shall be covered by either DEPARE, depare, DRGARE or UNSARE (Group 1) objects using one of the options mentioned in I.1.1 to I.1.9.		

I.1 Depths in Fairways and Areas

I.1.6 Low / High Water Range (Drying Height) (C)

Area denoting the range between low and high water conditions (often referred to as 'drying height'). The feature applies only to open rivers.

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization (shownin green)	 A) Area should border the shoreline and top bank. B) In case of tidal influence, use -H, where -H is height of tide C) US: INFORM is mandatory D) All navigable water bodies shall be covered by either DEPARE, depare, DRGARE or UNSARE (Group 1) objects using one of the options mentioned in I.1.1 to I.1.9. 	Object Encoding Object Class = DEPARE(A) (M) DRVAL1 = [-x.xx] (metres), e.g0.43 or "unknown" (M) DRVAL2 = [0.00] (metres) (C) INFORM = ["Range between low and high water conditions"] (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

I.1 Depths in Fairways and Areas

I.1.7 Shallow Depth (C)

Area within the waterway bounded by zero depth and the project depth.

Graphics	Encoding Instructions	Object Encoding
Chart Symbol PORTL AND BAR IENC Symbolization	A) US: Encode the depth area between the shoreline (COALNE) and the project depth area (see Fairway Depth / Project Depth - I.1.5); DRVAL1 = 0 and DRVAL2 = 2.7 B) All navigable water bodies shall be covered by either DEPARE, depare, DRGARE or UNSARE (Group 1) objects using one of the options mentioned in I.1.1 to I.1.9. I.1 Depths in Fairways and Areas

I.1.8 Soundings (O)

A measured water depth or spot that has been reduced to a vertical datum. (S-57standard)

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	A) Spot soundings should be used sparingly in IENC, especially on rivers and canals. On rivers and canals only in rare cases where such information is of vital interest to skippers and no other encoding seems to be possible (like e.g. wrecks or obstructions to navigation) soundings may be used. This might be in case of isolated rocks below low water level. B) Spot soundings shall always be referred to the same water level as the surrounding depth information. C) The value of the sounding is	Object Encoding Object Class = SOUNDG(P) (M) SCAMIN = [compilation scale multiplied by 2] (O) TECSOU = [1 (found by echo-sounder), 2 (found by side-scan-sonar), 3 (found by multibeam), 4 (found by diver), 5 (found by leadline), 6 (swept by wire-drag), 7 (found by laser), 8 (swept by vertical acoustic system), 9 (found by electromagnetic sensor), 10 (photogrammetry), 11 (satellite imagery), 12 (found by levelling), 13 (swept by side-scansonar), 14 (computer generated)] (O) SOUACC = [x.xx] The best estimate of the
	encoded in the 3-D Coordinate field of the Spatial Record Structure (see S-57 Part 3).	accuracy of the sounding data. Minimum value: 0; Resolution: 0.01 m (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

I.1 Depths in Fairways and Areas

I.1.9 Unsurveyed Area (C)

An area for which no bathymetric survey information is available. (S-57standard)

Graphics	Encoding Instructions	Object Encoding
Chart Symbol Un Surveyed 11 13 17 IENC Symbolization	A) Those areas in the river which cannot be surveyed, for example, due to depths too shallow for surveying boats and hence no depth data is available, shall be coded by UNSARE. This shall only be done for areas below the specific water level to which the depth of the river is referred. For areas above this specific water level, DEPARE - DRVAL2 = 0 shall be used (refer to l.1.6). B) Especially in case parts of the navigable water area are not surveyed but may be deep enough for navigation, DEPARE with QUASOU = 2 (depth unknown) or 8 (value reported (not surveyed)) shall be used in order to show that ships may navigate in these areas as well. This may imply especially for sidearms or private marinas. C) All navigable water bodies shall be	Object Class = UNSARE(A) (C) QUASOU = (Refer to letter B) (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance) Object Encoding Object Class = DEPARE(A) (M) DRVAL1 = [0.00] (metres) (M) DRVAL2 = Maximum known depth of depth area: [xx.xx] (metres) or "unknown" (C) QUASOU = (Refer to letter B) (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)] (C) SORDAT = [YYYYMMDD]
	covered by either DEPARE, depare, DRGARE or UNSARE (Group 1) objects using one of the options mentioned in I.1.1 to I.1.9.	(C) SORIND = (Refer to Section B, General Guidance)

I.2 Depth Contours

I.2.1 Depth Contour (O)

Line of constant depth denoting the depth between Shallow Depth and Fairway / Project Depth.

Graphics	Encoding Instructions	Object Encoding
Chart Symbol IENC Symbolization	A) US: USACE shall show a single depth contour for project depth (typically 2.74 (9')). A zero (0) depth contour shall also be used if a Low / High Water Range (Drying Height) exists (refer to I.1.6). B) EU: Depth contours shall be encoded between different depth areas to allow the Inland ECDIS to highlight the safety depth selected by the skipper.	Object Encoding Object Class = DEPCNT(L) (M) VALDCO = [xx.xx] (metres), e.g., 2.74 (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)] (M) SCAMIN = [EU: 12000; US: 18750] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

I.3 Depth References

I.3.1 Depth Indicator (C)

Device that shows the real water depth between the actual water level and the bottom of the waterway or isolated dangers under water (e.g., ground sill).

The manner in which the device indicates this can either be analog (e.g., by a water level staff / pole - one can read the real water depth directly at the water level) or digital (e.g. by a display).

Distinction: external indicator of a gauge, also if the indicator is not directly located at the gauge – this is not the same as a depth indicator (values at gauges are always referred to the zero point of the gauge).

depth indicator (values at gauges are always referred to the zero point of the gauge).		
Graphics	Encoding Instructions	Object Encoding
Real World	 A) INFORM can be used to give unformatted text as additional information. For form atted text in an external file, TXTDSC has to be used. B) EU: Depth indicators must be encoded. C) This feature could be aggregated to a lock, for example, by a C_AGGR object. D) A remote display of a depth indicator has to be encoded in the same way. The name of the related depth indicator has to be encoded as OBJNAM. The value of waterway distance of the related depth indicator can be provided in INFORM. The remote display has to be connected to the related sistaw with C_AGGR. 	Object Class = sistaw(P) (M) catsiw = [18 (depth indication)] (C) OBJNAM = [name of depth indicator or related depth indicator] (O) NOBJNM = (Refer to Section B, General Guidance) (O) INFORM = [additional information, e.g. "referenced to ground still"] (O) NINFOM = (Refer to Section B, General Guidance) (C) TXTDSC = (Refer to Section B, General Guidance) (C) TXTDSC = (Refer to letter A) (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)] (M) SCAMIN = [EU: 22000; US: 45000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

I.3 Depth References

I.3.2 High Water Mark (C)

Device that shows if official high water levels are reached. This can be indicated either by analog (e.g., by signs like a staff gauge) or digital (e.g., by a display).

Graphics	Encoding Instructions	Object Encoding
Real World JIII JIIII JIII JIII	A) INFORM can be used to give unformatted text as additional information. For formatted text in an external file, TXTDSC has to be used. B) EU: High Water Marks must be encoded.	Object Class = sistaw(P) (M) catsiw = [15 (high water mark)] (O) INFORM = [additional information, e.g., "I=460cm at gauge Kaub"] (O) NINFOM = (Refer to Section B, General Guidance) (C) TXTDSC = (Refer to letter A) (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)] (M) SCAMIN = [EU: 22000; US: 45000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

I.3 Depth References

I.3.3 Vertical Clearance Indicator (C)

Device that shows the vertical clearance between the actual water level and isolated dangers above water level, such as bridges, overhead cables etc.

This can be indicated either by analog (e.g., by fixed upside down scales on pylons of bridges - one can read the clearance directly at the water level) or digital (e.g., by a display).

Graphics	Encoding Instructions	Object Encoding
Real World	A) INFORM can be used to give unformatted text as additional information. For formatted text in an external file, TXTDSC has to be used.	Object Encoding Object Class = sistaw(P) (M) catsiw = [16 (vertical clearance indication)]

	must be encoded. C) This feature must be aggregated to a bridge, an overhead cable or	(O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)]
	overhead pipeline, etc. by a C_AGGR object.	(M) SCAMIN = [EU: 22000; US: 45000]
IENC Symbolization		(C) SORDAT = [YYYYMMDD]
		(C) SORIND = (Refer to Section B, General Guidance)

I.3 Depth References

I.3.4 Waterway Gauge (C)

A waterway gauge is an instrument for measuring water levels. Waterway gauges provide the actual water level information to calculate actual depths and vertical clearances, taking into account the sloped nature of river water surfaces.

calculate actual depths and vertical clearances, taking into account the sloped nature of river water surfaces.				
Graphics	Encoding Instructions	Object Encoding		
Chart Symbol (USACE Gauge) COE GA	A) The waterway gauge may be encoded as a point object at the location of the real world entity. Preferably the gauge should be encoded as an area object covering its complete area of applicability (to be decided by the chart producer if this area covers only the fairway or the complete riverbed). B) The name of the gauge shall be encoded by OBJNAM. As the name the term known by the skippers shall be chosen. In case an additional name in e.g., Cyrillic letters is well known this name may be encoded in the NINFOM attribute. C) If the ISRS Location Code is available it has to be encoded (refer to General Guidance section H). D) Category of the gauge may be encoded by using the 'catgag' attribute. E) The river km or mile of the location of the gauge shall be encoded by using the 'wtwdis' attribute. F) The zero point of the gauge is defined by the attributes ELEVAT (indicating the units above the locally used gravitational level) and 'reflev', indicating the used gravitational level itself (also refer to the picture below). G) When a gauge is encoded as a point object (mainly in case a water level model is available), the area of applicability may be provided by a specific distance of impact down and up stream using the attributes 'disipd' (downstream) and 'disipu' (upstream). 'disipd' and 'disipu' should be used for both point and area objects. H) Reference to specific defined water	Object Encoding Object Class = wtwgag(P,A) (C) OBJNAM = [name of gauge] (O) NOBJNMM = (Refer to Section B, General Guidance) (C) unlocd = [ISRS Location Code] (O) catgag = [1 (water level staff / pole), 2 (recording water level gauge), 3 (recording water level gauge), 3 (recording water level gauge with external indicator), 5 (recording water level gauge with external indicator), 5 (recording water level gauge with external indicator), 5 (recording water level gauge with remote access and remote indicator)] (O) wtwdis = [xxxx.xxx] (units defined in hunits), e.g., 2451.732 (O) hunits = [3 (kilometres), 4 (hectometres), 5 (statute miles), 6 (nautical miles)] (O) ELEVAT = [xxx.xx] (metres), e.g., 159.87 (C) verdat = [12 (Mean lower low water), 23 (Lowest astronomical tide), 24 (Local datum), 30 (Highest astronomical tide), 31 (Local low water reference level), 32 (Local high water reference level), 34 (Equivalent height of water (German GIW)), 35 (Highest Shipping Height of Water (German HSW)), 36 (Reference low water level according to Danube Commission), 37 (Highest Shipping height of water according to Danube Commission), 37 (Highest shipping height of water according to Danube Commission), 38 (Dutch river low water reference level (OLR)), 39 (Russian project water level), 40 (Russian normal backwater level), 41 (Ohio River Datum), 42 (Approximate LAT), 43 (Dutch High Water Reference Level (MHW)), 45 (Dutch estuary low water reference level (OLW))] (O) reflev = [1 (Baltic datum), 2 (Adriatic level), 3 (Amsterdam Ordnance Datum (NAP)), 4 (Mean Sea Level), 5 (Other datum), 6 (National Geodetic Vertical Datum - NGVD29), 7 (North American Vertical Datum - NGVD29), 7 (North American Vertical Datum - NGVD29), 7 (North American Vertical Datum - NGVD29), 10 (Tweede Algemene Waterpassing (TAW))]		
	levels shall be enabled.	(O) disipd = [distance of impact, downstream: unit defined in the cell header, e.g., metre (m),		

ES-RIS 2025/1 - Annex 1 - Appendix 2

- 1. For high water levels:
- 'higwat' to indicate the defined high water level (e.g. 567 cm)
- 'hignam' to indicate the specific high water level including the year of publication or a period indication (e.g., HSW96)
- 2. For mean water levels:
- 'meawat' to indicate the mean water level (value and units)
- 'meanam' to indicate the specific mean water level including the year of publication or a period indication (name and year)
- 3. For low water levels:
- 'lowwat' to indicate the low water level (value and units)
- 'lownam' to indicate the specific low water level including the year of publication or a period indication (name and year)

In the event that there is another specific and important water level, this may be encoded by using the attributes 'othwat' and 'othnam'.

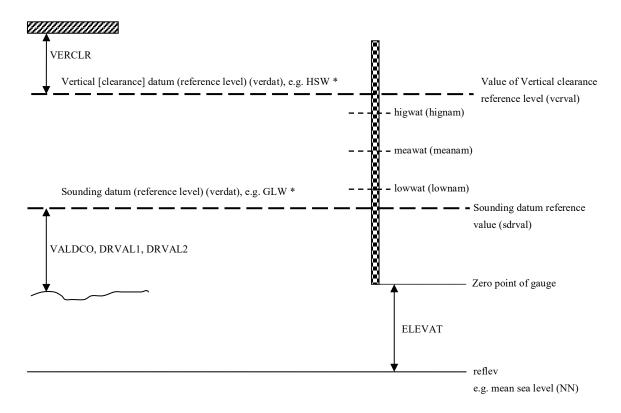

- I) In order to enable IENC based applications to calculate clearances and depths automatically the following information is used:

 Vertical clearances at bridges shall always be referred to a specific water level. This level shall be indicated within the 'vcrlev' attribute (preferably according to the list of 'verdat' values. This water level should be the same as indicated in 'hignam'.
- J) The same way as in the last point shall be followed for providing information on the reference water level for depth information. In this case the attribute 'sdrlev' may be used and should be equal to 'lownam' in most cases.
- K) EU: Waterway gauges that are relevant and useable for navigation must be encoded.
- This feature could be aggregated to a bridge or a lock, etc. by a C_AGGR object.
- M) A remote display of gauge has to be encoded in the same way. The name of the related gauge has to be encoded as OBJNAM. The wtwdis has to be encoded with the location of the related gauge. The remote

resolution: 1m]

- (O) disipu = [distance of impact, upstream: unit defined in the cell headers, e.g., metre (m), resolution: 1m]

	display has to be connected to the related wtwgag with C_AGGR.			
	N) Use 'vcrlev' and 'vcrval' if the local value and name of vertical river datum reference level (design waterlevel) is known.			
	O) Use 'sdrlev' and 'sdrval' if the local value and name of vertical river datum reference level (design waterlevel) is known.			

- * The sounding or vertical datum (reference level) are defined either in
- in the cell header (valid for all objects in the cell)
- at the meta objects m_sdat or m_vdat, if another value than in cell header
- at the object itself (attribute verdat), if another value than in cell header or meta object.

I.3 Depth References

I.3.5 Waterway Profile (C)

A waterway profile is an imaginary (i.e., physically non-existent) line across the waterway.

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	A) If waterway profiles are used on a waterway, the spacing of the waterway profiles depends on the local slope of the water level. The most common spacing is every one hundred metres. Preferably the location of waterway profiles coincides with distance marks ashore. B) HEIGHT refers to the reference level within the attribute 'reflev'. C) If detailed depths for water level model are provided waterway profiles must be encoded in order to be able to assign a waterway distance to the depth area (See I.1.2 Detailed Depth - water level model). D) Use 'sdrlev' and 'sdrval' if the local value and name of vertical river datum reference level (design waterlevel) is known.	Object Class = wtwprf(L) (M) wtwdis = [xxxx.xxx] (units defined in hunits), e.g., 2451.732 (M) hunits = [3 (kilometres), 5 (statute miles), 6 (nautical miles)] (C) HEIGHT = [xxx.x] metres, e.g., 27.4 (C) verdat = [12 (Mean lower low water), 23 (Lowest astronomical tide), 24 (Local datum), 30 (Highest astronomical tide), 31 (Local low water reference level), 32 (Local mean water reference level), 33 (Local mean water reference level), 34 (Equivalent height of water (German GIW)), 35 (Highest Shipping Height of Water (German HSW)), 36 (Reference low water level according to Danube Commission), 37 (Highest shipping height of water according to Danube Commission), 38 (Dutch river low water reference level (OLR)), 39 (Russian project water level), 40 (Russian normal backwater level), 41 (Ohio River Datum), 42 (Approximate LAT), 43 (Dutch High Water Reference Level (MHW)), 45 (Dutch estuary low water reference level (OLW))] (C) reflev = [1 (Baltic datum), 2 (Adriatic level), 3 (Amsterdam Ordnance Datum (NAP)), 4 (Mean Sea Level), 5 (Other datum), 6 (National Geodetic Vertical Datum - NGVD29), 7 (North American Vertical Datum - NGVD29), 7 (North American Vertical Datum - NGVD29), 7 (North American Vertical Datum - NGVD29), 10 (Tweede Algemene Waterpassing (TAW))] (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) Sdrlev = (Name of reference level to which depth are referred (from verdat list) plus version indication), e.g. GIW 2002 (O) sdrval = [xx.xx] (metres), e.g., 2.05 (M) SCAMIN = [EU: 12000; US: 18750] (C) SORDAT = [YYYYMMDD]

L.2 Ferries

L.2.1 Cable Ferry (M)

A route in a body of water where a ferry crosses from one shoreline to another. In this specific case a ferry that follows a fixed route guided by a cable (adapted from IHO Specifications, M-4). (Digital Geographic Information Working Group, Oct.87) Cable ferries (either assisted by propulsion or not) are fixed to a cable. This cable is crossing the river either above or below water surface

Graphics	Encoding Instructions	Object Encoding
Real World IENC Symbolization	A) Code the route that connects the docks or mooring facilities used by the ferry. B) The route should be the path officially permitted by the relevant authority. If no such official designation, use the route typically used by the ferry vessel(s). C) Use STATUS if any of the conditions apply. D) A ferry may use a high water route and low water route. Label in INFORM as "Used for Low Water" and "Used for High Water" E) If the ferry is connected to a leading cable, which crosses the fairway above the water surface, this cable shall be encoded as an overhead cable. F) If the ferry has a special time schedule or special operating hours apply, the object can be combined with a time schedule. For this purpose please refer to the time schedule (general) object 'tisdge' see T.1.1 G) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the TXTDSC attribute. Encoding Instructions

Object Encoding

Real World

IENC Symbolization

- A) For berths without transshipment see M.1.3
- B) Where a berth may only be used for a limited period the duration should be indicated in INFORM. If there is a time schedule referring to special dates or times, use time schedule (general) object 'tisdge' (see T.1.1).
- C) To encode a berth, objects such as 'berths', MORFAC, 'resare' and navigational aids like 'notmrk' may be associated using a collection object C ASSO.
- D) The linear extent of berths object is defined by markers or notice marks (CEVNI signs E.5 E.5.15, E.6, E.7 or E.7.1) on the bank.
- E) If the width of a berth is not defined by notice marks, consider using 110' / 33,55 m (approximately three barge widths).
- F) Within port areas it is allowed to encode berths as line objects.
- G) Land facilities should be represented with buildings (BUISGL) and storage tank (SILTNK) or harbor facility (hrbfac) feature objects.
- The berth encodes the named place at a wharf. The wharf itself is encoded as a shoreline construction.
- I) For SLCON Multiple NATCON values can be used, if applicable.
- J) Use CATSLC as follows:
 - 4, Pier: facility is primarily a structure generally extending perpendicular from shoreline into water.
 - 6, Wharf: facility is primarily a structure parallel to shoreline; use if details of 15 or 16 no known.
 - 15, Solid face wharf: Facility consisting of a solid wall such that water can not circulate underneath.

Object Encoding

Object Class = berths(P,L,A)

- (C) SORIND = (Refer to Section B, General Guidance)

M.2 Restricted Areas

M.2.1 Restricted Area (C)

Area designated by the competent authority in which entry is prohibited or restricted to certain vessels, or certain transit rules apply. Restricted areas typically surround dams; see G.4.2 Dams.

apply. Restricted areas typically surround dams; see G.4.2 Dams.			
Graphics	Encoding Instructions	Object Encoding	
Chart Symbol JENC Symbolization	 A) Outline restricted area. The shoreline can be part of it, but may not be overlapped. B) EU: Restricted areas that are or could be defined by the CEVNI signs A.1 to A.9, B.6, C.1, C.3, C.5 (see annex "notice_marks.xls) shall be encoded. C) EU: To encode a restricted area that is defined by notice marks, the object 'resare' and the objects 'notmrk' may be associated using a collection object C_ASSO. D) If a restriction is more complicated see U.1 (legal ECDIS) E) The object class should not be used for restrictions that apply to whole waterways or large sections of waterways. For instance, If one restricted area covers a waterway, smaller restricted areas with more important information for the safety of navigation may not be noticed by the user. Especially restricted fairway width should only be used for small areas of up to 1 km. F) EU: CATREA = 26 (waterskiing area) may only be used, if navigation is not allowed in the area. Water skiing areas marked by CEVNI signs E.17, where navigation is allowed, should be encoded as CTNARE, like areas for water bikes or sail boards. G) For areas of limited width or limited depth see M.4.3 and M.4.4. H) EU: If the authority has extended the application of the prohibition of anchoring to the use of telescopic piles (spuds) in accordance with Article 7.03 of CEVNI rev. 5, restrn = 38 (use of spuds prohibitied) must be encoded. 	Object Class = resare(A) (M) restrn = [1 (anchoring prohibited), 2 (anchoring restricted), 7 (entry prohibited), 8 (entry restricted), 13 (no wake), 14 (area to be avoided), 27 (speed restricted), 28 (overtaking prohibited), 29 (overtaking of convoys by convoys prohibited), 30 (passing or overtaking prohibited), 31 (berthing prohibited), 32 (berthing restricted), 33 (making fast prohibited), 34 (making fast restricted), 35 (turning prohibited), 36 (restricted fairway depth), 37 (restricted fairway width), 38 (use of spuds prohibited), 40 (SOx emission restricted), 41 (NOx emission restricted)] (O) CATREA = [1 (offshore safety zone), 4 (nature reserve), 5 (bird sanctuary), 9 (military area), 12 (navigational aid safety zone), 19 (waiting area), 22 (fish sanctuary), 23 (ecological reserve), 25 (swinging area), 33 (ship pollution emission control)] (O) NATSUR = [1 (mud), 2 (clay), 3 (silt), 4 (sand), 5 (stone), 6 (gravel), 7 (pebbles), 8 (cobbles), 9 (rock), 11 (lava), 14 (coral), 17 (shells), 18 (boulder)] (C) INFORM = [if restrn = 2, 8, 32, 34: brief description of restriction; if over 10 words, use TXTDSC; if restrn = 27: maximum speed limit with unit] (O) NINFOM = (Refer to Section B, General Guidance) (M) SCAMIN = [EU: 22000; US: 75000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)	

M.3 Caution Areas

M.3.1 Caution Area (C)

Generally, an area where the skipper has to be made aware of circumstances influencing the safety of navigation.

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	 A) To be used on a limited basis only for short sections and in case of real importance for safety of navigation. B) Areas signposted by notice marks (areas for water scooters, high speed motorboats and slipping of boats) the object CTNARE shall also be used. Refer to the list of notice marks in the annex. C) Names of the sections shall be those, that are generally known by the skippers. In case no specific name is known the name of the closest town or land region should be used. D) EU: To encode a caution area, which is defined by notice marks, the object CTNARE and the objects 'notmrk' may be associated using a collection object C_ASSO. 	Object Class = CTNARE(P,A) (O) OBJNAM = [name of section or closest town] (O) NOBJNM = (Refer to Section B, General Guidance) (M) INFORM = [short description of the impact on the skipper in English language] (O) NINFOM = (Refer to Section B, General Guidance) (O) HORACC = [xx.xx] (metres), e.g., 1.54 (O) VERACC = [xx.xx] (metres), e.g., 1.54 (O) CATTEV = [4 (likely to change), 5 (unlikely to change), 6 (unassessed)] (M) SCAMIN = [EU: 22000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

M.4 Miscellaneous Areas / Limits

M.4.1 Communication Area (C)

An area, in which a vessel has to report or may request information

T I		
Graphics	Encoding Instructions	Object Encoding
IENC Symbolization (No IENC symbolization (only in pick report))	A) EU: A communication area can be defined by notice marks (CEVNI signs B.11 or E.23, see O.3.1) or by regulations. Communication areas at locks should include the waiting areas and advance signals. The communication area at bridges should cover about 1 to 1,5 km on both sides of the bridge, depending on the normal radar range. B) Use 'comare' object class. C) If there is a reporting duty at a specific point/line use 'rdocal' object class. (Refer to Q.2.1) D) The purpose of communication area should be given in the 'catcom'	Object Encoding Object Class = comare(A) (O) catcom = [1 (VTS centre), 2 (VTS sector), 3 (IVS point), 4 (MIB), 5 (lock), 6 (bridge), 7 (custom), 8 (harbour), 9 (WLAN area)] (M) COMCHA = [[XXXX];[XXXX];] (O) OBJNAM = [name of the communication area], e.g. "lock xy" (O) NOBJNM = (Refer to Section B, General Guidance) (O) STATUS = [3 (recommended), 8 (private), 9 (mandatory), 14 (public)] (O) TXTDSC = (Refer to letter I)
	attribute. E) The channel number assigned to a specific radio frequency, frequencies or frequency band has to be indicated in the COMCHA attribute.	(M) SCAMIN = [EU: 45000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)
	F) EU: The STATUS attribute should be used to indicate whether communication is recommended (CEVNI sign E.23) or mandatory (CEVNI sign B.11).	
	G) Detailed communication information (postal address, phone, fax, e-mail etc.) should also be encoded in the respective object class.	
	H) To encode a communication area, objects such as locks (lokbsn), bridges (bridge), customs (BUISGL, chkpnt), harbours (hrbare, prtare, hrbbsn), berths (berths) and notice marks (notmrk), may be associated using a collection object C_ASSO.	
Engading Cuido for Inland ENCo	I) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in TXTDSC. If some other means of communication is used for time-critical navigation-related communication, this should be mentioned in the remarks of the	Edition 2.5.1, 2021, 04.21, Subcontinum 4.1

ES-RIS 2025/1 - Annex 1 - Appendix 2 XML-file. Communication Areas must be J) encoded. K) For areas where Wireless Networks are available free of charge catcom 9 = WLAN area should be used. COMCHA shall be coded as "unknown". The network name (SSID = Service Set Identifier) shall be coded within OBJNAM, whereas INFORM can be used to provide additional information as intended coverage, encryption, available services, etc.

M.4 Miscellaneous Areas / Limits

M.4.2 River Surveillance Area (O)

A defined and named administrative area of a river surveillance

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	A) Use ADMARE object class, if the information about the competent river surveillance is important for navigation. B) If a structured external XML-file with detailed communication information is available, the reference to the file has to be entered here.	Object Class = ADMARE(A) (M) JRSDTN = [1 (international), 2 (national), 3 (national sub-division)] (M) NATION = (Nationality is encoded by a 2 character-code following ISO 3166 (refer to Annex A to S-57 Appendix A)) (M) OBJNAM = [name of the river surveillance] (O) NOBJNM = (Refer to Section B, General Guidance) (O) INFORM = [communication information] (O) NINFOM = (Refer to Section B, General Guidance) (O) TXTDSC = (Refer to letter B) (M) SCAMIN = [90000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

M.4 Miscellaneous Areas / Limits

M.4.3 Section of Limited Depth (O)

Generally, a short section of a waterway with limited depth and well known to skippers as of high relevance for safety, also by shipping companies as the reference for the planning of the draught of vessels.

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	 A) To be used on a limited basis only for short sections. B) Names of the sections shall be those, which are generally known by the skippers. In case no specific name is known the name of the closest town or land region should be used. C) EU: To encode a limited depth area, that is defined by notice marks, the object 'resare' and the object 'notmrk' may be associated using a collection object C_ASSO. D) If it is not sure that the bottom of the river is stable, INFORM shall equal, "water depth may change rapidly". 	Object Class = resare(A) (M) restrn = [36 (restricted fairway depth)] (O) OBJNAM = ["Shallow water area" + name of section or closest town] (O) NOBJNM = (Refer to Section B, General Guidance) (O) NATSUR = [1 (mud), 2 (clay), 3 (silt), 4 (sand), 5 (stone), 6 (gravel), 7 (pebbles), 8 (cobbles), 9 (rock), 11 (lava), 14 (coral), 17 (shells), 18 (boulder)] (C) INFORM = (Refer to letter D) (O) NINFOM = (Refer to Section B, General Guidance) (M) SCAMIN = [EU: 22000; US: 75000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

M.4 Miscellaneous Areas / Limits

M.4.4 Section of Limited Width (O)

Generally, a short section of a waterway with limited width and well known to skippers.

Graphics	Encoding Instructions	Object Encoding
	A) To be used on a limited basis only for short sections. B) Names of the sections shall be those, which are generally known by the skippers. In case no specific name is known the name of the closest town or land region should be used. C) EU: To encode a limited width area, which is defined by notice marks, the object 'resare' and the object 'notmrk' may be associated using a collection object C_ASSO.	Object Class = resare(A) (M) restrn = [37 (restricted fairway width)] (O) OBJNAM = ["Constricted section" + name of section or closest town)] (O) NOBJNM = (Refer to Section B, General Guidance) (O) NATSUR = [1 (mud), 2 (clay), 3 (silt), 4 (sand), 5 (stone), 6 (gravel), 7 (pebbles), 8 (cobbles), 9 (rock), 11 (lava), 14 (coral), 17 (shells), 18 (boulder)] (M) INFORM = [Section of high navigational importance due to limited width of fairway] (O) NINFOM = (Refer to Section B, General Guidance) (M) SCAMIN = [EU: 22000; US: 75000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

M.4 Miscellaneous Areas / Limits

M.4.5 Turning Basin (C)

An area of water or enlargement of a channel used for turning vessels. Indicated by CEVNI sign E.8

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	A) Use 'trnbsn' object class B) To encode a turning basin, which is defined by notice marks, the object 'trnbsn' and the object 'notmrk' may be associated using a collection object C_ASSO. C) If the ISRS Location Code is available it has to be encoded (refer to General Guidance section H). D) EU: Turning Basins must be encoded.	Object Encoding Object Class = trnbsn(P,A) (O) HORCLR = [The width of the basin, which is available for safe navigation. This may, or may not, be the same as the total physical width of the basin.] (O) OBJNAM = [name of the tuning basin] (O) NOBJNM = (Refer to Section B, General Guidance) (C) unlocd = [ISRS Location Code] (M) SCAMIN = [EU: 22000; US: 75000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

M.4 Miscellaneous Areas / Limits

M.4.6 Dumping Ground (C)

An area where dredged material or other potentially more harmful material, e.g. explosives, chemical waste, is deliberately deposited. (Derived from IHO Chart Specifications, M-4)

Graphics	Encoding Instructions	Object Encoding
Chart Symbol Dumping Ground IENC Symbolization	A) Use RESTRN if any of the conditions apply. B) Dumping grounds in navigable waters shall be encoded if any one of the listed restrictions applies.	Object Encoding Object Class = DMPGRD(A) (M) CATDPG = [2 (chemical waste dumping ground), 4 (explosives dumping ground), 5 (spoil ground)] (O) OBJNAM = [Name] (O) NOBJNM = (Refer to Section B, General Guidance) (C) RESTRN = [1 (anchoring prohibited), 3 (fishing prohibited), 5 (trawling prohibited), 7 (entry prohibited), 8 (entry restricted), 24 (dragging prohibited)] (M) SCAMIN = [EU: 260000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

M.4 Miscellaneous Areas / Limits

M.4.7 Marine Farm/Culture (C)

An assemblage of cages, nets, rafts and floats or posts where fish, including shellfish, are artificially cultivated. Also called fish farm. (IHO Dictionary, S-32, 5th Edition, 1811)

farm. (IHO Dictionary, S-32, 5th Edition, 1811)				
Graphics	Encoding Instructions	Object Encoding		
Chart Symbol Shellfish Beds (see Note) IENC Symbolization	A) EXPSOU, VALSOU and WATLEV must be encoded for all MARCUL objects if they are under water. B) If VALSOU is provided SOUACC and verdat should also be provided. C) Use STATUS if any of the conditions apply. D) Marine Farms/Cultures in navigable waters shall be encoded.	Object Encoding Object Class = MARCUL(P,L,A) (M) CATMFA = [1 (crustaceans), 2 (oysters/mussels), 3 (fish), 4 (seaweed)] (O) DATSTA = (Refer to Section B, General Guidance) (O) DATEND = (Refer to Section B, General Guidance) (O) PERSTA = (Refer to Section B, General Guidance) (O) PEREND = (Refer to Section B, General Guidance) (O) PEREND = (Refer to Section B, General Guidance) (C) EXPSOU = [1 (within the range of depth of the surrounding depth area), 2 (shoaler than the range of depth of the surrounding depth area)] (C) VALSOU = [sxxxxx.xx] (s: sign, negative values only) (O) QUASOU = [1 (depth known), 2 (depth unknown), 3 (doubtful sounding), 4 (unreliable sounding), 6 (least depth known), 7 (least depth unknown, safe clearance at depth shown), 8 (value reported (not surveyed)), 9 (value reported (not confirmed))] (C) SOUACC = [xx.x] (C) STATUS = [2 (occasional), 4 (not in use)] (C) WATLEV = [1 (partly submerged at high water), 2 (always dry), 3 (always under water/submerged), 4 (covers and uncovers), 5 (awash), 7 (floating)] (O) OBJNAM = [Name] (O) NOBJNM = (Refer to Section B, General Guidance) (M) SCAMIN = [260000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)		

M.4 Miscellaneous Areas / Limits

M.4.8 Fishing Facility (O)

A structure in shallow water for fishing purposes which can be an obstruction to ships in general. The position of these structures may vary frequently over time.

structures may vary frequently over time.				
Graphics	Encoding Instructions	Object Encoding		
Real World Chart Symbol Fish traps IENC Symbolization Fish stakes as a point Fish stakes as an area Fish trap, fish weir as a point Fish trap, fish weir as an area	A) If it is required to encode the (possible) presence of fishing facilities, it must be done using the feature FSHFAC B) The highest possible height of the fishing facilities above the river/seabed should be encoded in VERLEN. Vertical length measurements (VERLEN) do not require a datum.	Object Class = FSHFAC(P,L,A) (O) CATFIF = [1 (fishing stake), 2 (fish trap), 3 (fish weir)] (O) OBJNAM = [Name] (O) NOBJNM = (Refer to Section B, General Guidance) (O) INFORM = (Additional Information) (O) NINFOM = (Refer to Section B, General Guidance) (C) STATUS = [2 (occasional, seasonal), 4 (not in use)] (O) PERSTA = (Refer to Section B, General Guidance) (O) PEREND = (Refer to Section B, General Guidance) (O) VERLEN = [xxx.x] (metres), e.g., 1.5 (M) SCAMIN = [22000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)		

M.4 Miscellaneous Areas / Limits

M.4.9 Military Practice Area (O)

An area within which naval, military or aerial exercises are carried out. Also called an exercise area.

Graphics	Encoding Instructions	Object Encoding
Real World Chart Symbol IENC Symbolization	A) If it is required to encode a military practice area, it must be done using the object class MIPARE.	Object Encoding Object Class = MIPARE(P,A) (O) CATMPA = [4 (firing danger area)] (O) OBJNAM = [Name] (O) NOBJNM = (Refer to Section B, General Guidance) (O) INFORM = (Additional Information) (O) NINFOM = (Refer to Section B, General Guidance) (C) STATUS = [2 (occasional), 4 (not in use)] (M) SCAMIN = [260000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

M.4 Miscellaneous Areas / Limits

M.4.10 Pilot Boarding Place (O)

The meeting place to which the pilot comes out. (IHO Chart Specifications, M-4).

Graphics	Encoding Instructions	Object Encoding
Chart Symbol IENC Symbolization Pilot boarding place Pilot boarding area	A) If it is required to encode a pilot boarding place, it must be done using the object class PILBOP B) Use STATUS if it is a temporary pilot boarding place.	Object Encoding Object Class = PILBOP(P,A) (O) CATPIL = [1 (boarding by pilot-cruising vessel), 2 (boarding by helicopter), 3 (pilot comes out from shore)] (O) COMCHA = [[XXXX];[XXXX];] (O) PILDST = [pilot district] (O) NPLDST = [pilot district in national language] (O) OBJNAM = [Name] (O) NOBJNM = (Refer to Section B, General Guidance) (C) STATUS = [7 (temporary)] (M) SCAMIN = [24000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

N - Lights

N.1 Light Structures

N.1.1 Bridge Light (C)

A navigation light positioned on a bridge span or support pier.

Graphics

Encoding Instructions

Object Encoding

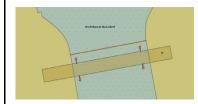

Real World

Chart Symbol

IENC Symbolization

- A) EU: If the lights are CEVNI signs A.1, D.1 and D.2, which are combined with the corresponding notice marks for day time (see N.3.2), they do not need to be encoded as LIGHTS. But, if they are important for the safety of navigation, they should be indicated (e.g., to prevent confusion with other lights).
- B) US: Name of the light should be placed in the INFORM field, e.g. "Bridge Name" + (River Mile)
- C) Place the LIGHTS object on navigable span and piers bounding navigable span. No master object is required.
- D) If there are multiple lights in the same position, make one LIGHTS object and use MLTYLT to define the number of lights represented.
- E) Use one LIGHTS feature to represent upper and lower deck lights, unless the two lights are used for navigation alignment.
- F) EU: The exhibition condition of light EXCLIT is defined as follows:
 - 1. light shown without change of character: a light shown throughout the 24 hours without change of character.
 - 2. daytime light: a light that is only exhibited by day.
 - 3. fog light: a light that is exhibited in fog or conditions of reduced visibility.
 - 4. night light: a light that is only exhibited at night.
- G) The light characteristic LITCHR is defined as follows:
 - 1. fixed: a signal light that shows continuously, in any given direction, with constant luminous intensity and colour

Object Encoding

Object Class = LIGHTS(P)

- (M) COLOUR = [1 (white), 3 (red), 4 (green), 6 (yellow)]
- (C) EXCLIT = [1 (light shown without change of character), 2 (daytime light), 3 (fog light), 4 (night light)]
- (M) LITCHR = [1 (fixed), 2 (flashing), 3 (long-flashing), 4 (quick-flashing), 5 (very quick-flashing), 6 (ultra quick flashing), 7 (isophased), 8 (occulting), 9 (interrupted quick-flashing), 10 (interrupted very quick-flashing), 11 (interrupted ultra quick-flashing), 12 (morse), 13 (fixed/flash), 14 (flash/long-flash), 15 (occulting/flash), 16 (fixed/long-flash), 17 (occulting alternating), 18 (long-flash alternating), 19 (flash alternating), 20 (group alternating), 25 (quick-flash plus long-flash), 26 (very quick-flash plus long-flash), 27 (ultra quick-flash plus long-flash), 28 (alternating), 29 (fixed and alternating flashing)]
- (C) SIGPER = [xx.xx] (e.g. signal period of 12 seconds, coded as 12)
- (C) INFORM = (Refer to letter B)
- (C) MLTYLT = Integer number of lights, minimum 2.
- (C) SIGGRP = [(x),(x)...], e.g., (), (2), (2+1)
- (C) SIGSEQ = [LL.L + (EE.E)] (seconds)
- (M) ORIENT = [xxx.xx or "unknown"] (degree (°)), e.g., 110.76

- (C) SORDAT = [YYYYMMDD]
- (C) SORIND = (Refer to Section B, General Guidance)

- 2. flashing: a rhythmic light in which the total duration of light in a period is clearly shorter than the total duration of darkness and all the appearances of light are of equal duration
- 3. long-flashing: a flashing light in which a single flash of not less than two seconds duration is regularly repeated
- 4. quick-flashing: a light exhibiting without interruption very rapid regular alternations of light and darkness
- 5. very quick flashing: a flashing light in which flashes are repeated at a rate of not less than 80 flashes per minute but less than 160 flashes per minute
- 6. ultra quick flashing: a flashing light in which flashes are repeated at a rate of not less than 160 flashes per minute
- 7. isophased: a light with all durations of light and darkness equal
- 8. occulting: a rhythmic light in which the total duration of light in a period is clearly longer than the total duration of darkness and all the eclipses are of equal duration
- 9. interrupted quick flashing: a quick light in which the sequence of flashes is interrupted by regularly repeated eclipses of constant and long duration
- 10. interrupted very quick flashing: a light in which the very rapid alterations of light and darkness are interrupted at regular intervals by eclipses of long duration
- 11. interrupted ultra quick flashing: a light in which the ultra quick flashes (160 or more per minute) are interrupted at regular intervals by eclipses of long duration
- 12. morse: a rhythmic light in which appearances of light of two clearly different durations are grouped to represent a character or characters in the Morse code
- 28. alternating: a signal light that shows, in any given direction, two or more colours in a regularly repeated sequence with a regular periodicity
- H) The signal period SIGPER is the time occupied by an entire cycle of

ES-RIS 2025/1 - Annex 1 - Appendix 2 intervals of light and eclipse. I) The signal group SIGGRP is the number of signals, and the combination of signals or the morse character(s) within one period of full sequence. The signal group of a light is encoded using brackets to separate the individual groups. A group of signals may be a single number, a chain of numbers separated by "+", a sequence of up to 4 letters or a letter and a number. A fixed light has no signal group. Where no specific signal group is given for one of the light characteristics, this should be shown by an empty pair of brackets. The sequence of times occupied by J) intervals of light and eclipse is encoded in SIGSEQ. Example: "00.8+(02.2)+00.8+(05.2)" encodes a signal sequence with two intervals of light and two intervals of eclipse. K) This feature must be aggregated to

a bridge by a C AGGR object.

N - Lights

N.1 Light Structures

N.1.2 Minor Light (C)

A navigation light that is supported on a structure, which cannot be depicted using the encoding in Sections O.1 or O.2. As a 'minor' light, its name does not need to be displayed.

Graphics

Encoding Instructions

Object Encoding

Real World

IENC Symbolization

A) PILPNT, MORFAC or LNDMRK must be defined as the master object with LIGHTS as the slave object. If the supporting structure is not known. PILPNT must be used.

- B) OBJNAM should be placed on the supporting structure (master object) and not on the LIGHTS.
- C) When no specific signal group is provided, use SIGGRP=().
- D) If there are multiple lights in the same position, make one LIGHTS object and use MLTYLT to define the number of lights represented.
- E) EU: The exhibition condition of light EXCLIT is defined as follows:
 - 1. light shown without change of character: a light shown throughout the 24 hours without change of character.
 - 2. daytime light: a light that is only exhibited by day.
 - 3. fog light: a light that is exhibited in fog or conditions of reduced visibility.
 - 4. night light: a light which is only exhibited at night.
- F) US: STATUS = 8 (private)
- G) US: Western River Rules, RED will always be a double flash SIGGRP

 (2), and Green will always be a single flash.
- H) The light characteristic LITCHR is defined as follows:
 - 1. fixed: a signal light that shows continuously, in any given direction, with constant luminous intensity and colour
 - 2. flashing: a rhythmic light in which the total duration of light in a period is clearly shorter than the total duration of darkness, and all the appearances of light are of equal

Coding of Structure Object

duration

- 3. long-flashing: a flashing light in which a single flash of not less than two seconds duration is regularly repeated
- 4. quick-flashing: a light exhibiting without interruption very rapid regular alternations of light and darkness
- 5. very quick flashing: a flashing light in which flashes are repeated at a rate of not less than 80 flashes per minute but less than 160 flashes per minute
- 6. ultra quick flashing: a flashing light in which flashes are repeated at a rate of not less than 160 flashes per minute
- 7. isophased: a light with all durations of light and darkness equal
- 8. occulting: a rhythmic light in which the total duration of light in a period is clearly longer than the total duration of darkness and all the eclipses are of equal duration
- 9. interrupted quick flashing: a quick light in which the sequence of flashes is interrupted by regularly repeated eclipses of constant and long duration
- 10. interrupted very quick flashing: a light in which the very rapid alterations of light and darkness are interrupted at regular intervals by eclipses of long duration
- 11. interrupted ultra quick flashing: a light in which the ultra quick flashes (160 or more per minute) are interrupted at regular intervals by eclipses of long duration
- 12. morse: a rhythmic light in which appearances of light of two clearly different durations are grouped to represent a character or characters in the Morse code
- 28. alternating: a signal light that shows, in any given direction, two or more colours in a regularly repeated sequence with a regular periodicity
- The signal period SIGPER is the time occupied by an entire cycle of intervals of light and eclipse.
- J) The signal group SIGGRP is the number of signals, the combination of signals or the morse character(s)

- (alternating), 29 (fixed and alternating flashing)]

than one colour and when COLOUR is encoded.

From IHO S-57 APPENDIX B.1 Annex A - Use of the Object Catalogue for ENC

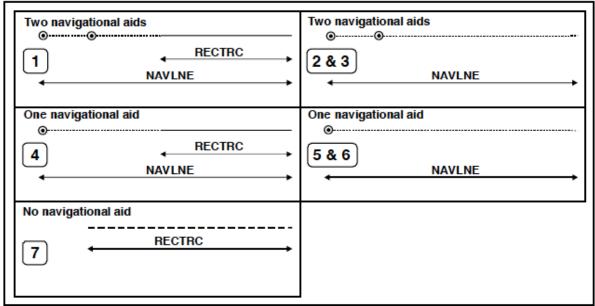

Figure A

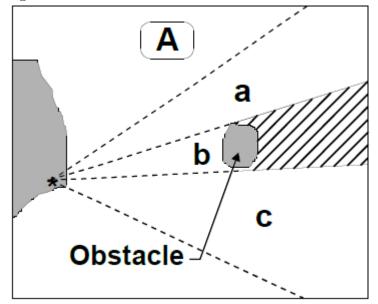

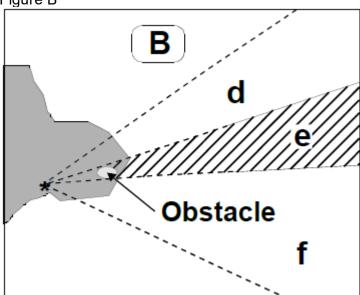

Figure B

N - Lights

N.1 Light Structures

N.1.5 Sector Light (C)

A sector light consists of a single light whose total luminous beam is divided into sectors of different colours to provide a warning or a leading line to mariners. (IALA Aids to Navigation Manual – IALA NAVGUIDE 3 Edition 5 2006)

Graphics

Encoding Instructions

Object Encoding

Real World

- A) PILPNT, MORFAC or LNDMRK must be defined as the master object with LIGHTS as the slave object. If the supporting structure is not known, PILPNT must be used.
- B) Each sector in which the light is visible from the waterway is encoded with one object LIGHTS
- C) No object is created to encode a sector where no light is transmitted.
- D) Limits of sectors are encoded with the attributes SECTR1 and SECTR2.
- E) SECTR1 specifies the first limit of the sector. The order of SECTR1 and SECTR2 is clockwise around the central object (e.g. a light).
- F) OBJNAM should be placed on the supporting structure (master object) and not on the LIGHTS.
- G) EU: The exhibition condition of light EXCLIT is defined as follows:
 - 1. light shown without change of character: a light shown throughout the 24 hours without change of character.
 - 2. daytime light: a light that is only exhibited by day.
 - 3. fog light: a light that is exhibited in fog or conditions of reduced visibility.
 - 4. night light: a light that is only exhibited at night.
- H) The light characteristic LITCHR is defined as follows:
 - 1. fixed: a signal light that shows continuously, in any given direction, with constant luminous intensity and colour
 - 2. flashing: a rhythmic light in which the total duration of light in a period is clearly shorter than the total duration of darkness and all the appearances of light are of equal

IENC Symbolization

duration

- 3. long-flashing: a flashing light in which a single flash of not less than two seconds duration is regularly repeated
- 4. quick-flashing: a light exhibiting without interruption very rapid regular alternations of light and darkness
- 5. very quick flashing: a flashing light in which flashes are repeated at a rate of not less than 80 flashes per minute but less than 160 flashes per minute
- 6. ultra quick flashing: a flashing light in which flashes are repeated at a rate of not less than 160 flashes per minute
- 7. isophased: a light with all durations of light and darkness equal
- 8. occulting: a rhythmic light in which the total duration of light in a period is clearly longer than the total duration of darkness and all the eclipses are of equal duration
- 9. interrupted quick flashing: a quick light in which the sequence of flashes is interrupted by regularly repeated eclipses of constant and long duration
- 10. interrupted very quick flashing: a light in which the very rapid alterations of light and darkness are interrupted at regular intervals by eclipses of long duration
- 11. interrupted ultra quick flashing: a light in which the ultra quick flashes (160 or more per minute) are interrupted at regular intervals by eclipses of long duration
- 12. morse: a rhythmic light in which appearances of light of two clearly different durations are grouped to represent a character or characters in the Morse code
- 28. alternating: a signal light that shows, in any given direction, two or more colours in a regularly repeated sequence with a regular periodicity
- The signal period SIGPER is the time occupied by an entire cycle of intervals of light and eclipse.
- J) The signal group SIGGRP is the number of signals, the combination of signals or the morse character(s)

(group alternating), 25 (quick-flash plus long-flash), 26 (very quick-flash plus long-flash), 27 (ultra quick-flash plus long-flash), 28 (alternating), 29 (fixed and alternating flashing)]

- (M) SECTR1 = [xxx.xx]
- (M) SECTR2 = [xxx.xx]
- (C) SIGPER = [xx.xx] (e.g. signal period of 12 secondscoded as "12")
- (C) SIGGRP = [(x),(x)...], e.g., (), (2), (2+1)
- (C) SIGSEQ = [LL.L + (EE.E)] (seconds)
- (O) LITVIS = [3 (faint), 7 (obscured), 8 (partially obscured)]
- (O) HEIGHT = [xxx.x] metres, e.g., 27.4
- (O) VALNMR = [xx.x]
- (C) INFORM = US: descending bank (e.g. LDB for left descending bank)
- (O) STATUS = [8 (private), 14 (public)]
- (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)]
- (M) SCAMIN = [EU: 22000; US: 60000]
- (C) SORDAT = [YYYYMMDD]
- (C) SORIND = (Refer to Section B, General Guidance)

within one period of full sequence. The signal group of a light is encoded using brackets to separate the individual groups. A group of signals may be a single number, a chain of numbers separated by "+", a sequence of up to 4 letters or a letter and a number. A fixed light has no signal group. Where no specific signal group is given for one of the light characteristics, this should be shown by an empty pair of brackets.

- K) The sequence of times occupied by intervals of light and eclipse is encoded in SIGSEQ. Example: "00.8+(02.2)+00.8+(05.2)" encodes a signal sequence with two intervals of light and two intervals of eclipse.
- L) Official aids to navigation shall be encoded.
- M) If is required to encode an oscillating light sector, it should be done using a Light Sectored feature, with iterations of the complex attribute light sector as follows: For light sectors in the IALA A system that are alternating and oscillate increasingly from white to green (to starboard) and red (to port) with increasing deviation from the track defined by the directional light:

light sector: light characteristic = 28 (Alternating); colour = 1,3 (White, Red); sector limit; information (text) = White phase decreases as bearing to light increases

light sector: light characteristic = 28 (Alternating); colour = 1,4 (White, Green); sector limit; information (text) = White phase increases as bearing to light increases

For lights in the IALA B system that are alternating and oscillate increasingly from white to red (to starboard) and green (to port) with increasing deviation from the track defined by the directional light; transpose the colours red and green in the above encoding.

For lights in the IALA A system that

are occulting green (to starboard) and red (to port) which oscillate with increasing period of eclipse to isophased or flashing with increasing deviation from the track defined by the directional light:

light sector: light characteristic = 8 (Occulting); colour = 3 (Red); sector limit; information (text) = Light phase decreases as bearing to light increases

light sector: light characteristic = 8 (Occulting); colour = 4 (Green); sector limit; information (text) = Light phase increases as bearing to light increases

For lights in the IALA B system that are occulting red (to starboard) and green (to port) which oscillate with increasing period of eclipse to isophased or flashing with increasing deviation from the track defined by the directional light; transpose the colours red and green in the above encoding.

Oscillating lights which are not IALA should be encoded similar to the above. For instance, where a light contains white sectors that are occulting and oscillate with increasing period of eclipse to isophased or flashing with increasing deviation from the track defined by the directional light:

For the sector to port of the track defined by the directional light: light sector: light characteristic = 8 (Occulting); colour = 1 (White); sector limit; information (text) = Light phase decreases as bearing to light increases

For the sector to starboard of the track defined by the directional light: light sector: light characteristic = 8 (Occulting); colour = 1 (White); sector limit; information (text) = Light phase increases as bearing to light increases

All other light sectors must be

encoded using additional iterations of light sector, with sub-attributes (including light characteristic) populated in accordance with the characteristics of the sector, or using the feature Light Directional

If an encoded light is obscured in a N) part of the navigable area of a sector (see Figure A) beyond an offshore obstruction, it must be encoded as several LIGHTS objects. The partially obscured sector of (b), seaward of the island, must be encoded as a LIGHTS object, with attributes LITVIS = 8 (partially obscured) and INFORM = Sector obscured only beyond "...". The sectors in which the light is visible from seaward ((a) and ©) must be encoded as separate LIGHTS objects.

If there is no navigable water between the light and the obstacle (see Figure B), the masked sector must be encoded as a LIGHTS object, with LITVIS = 3 (faint) or 7 (obscured).

O) Encoding of COLPAT is mandatory for any pile or post that has more than one colour and when COLOUR is encoded.

O.2 Beacons & Daymarks

O.2.1 Day Mark (M)

Day marks are used to code passing and crossing day beacons on the inland river system.

A)

Graphics

Encoding Instructions

'bcnlat' must be defined as the

Object Encoding

Real World (US)

Real World (CEVNI)

Chart Symbol (Version 1)

Daybeacon

master object, with
DAYMAR/daymar as the slave
object.

B) In the event there is a light on the

day mark, the 'bcnlat' object should be designated as the master and coded with the name of the light.

C) EU: For marks indicating the position of the channel the DAYMAR/daymar COLOUR/ COLPAT/ TOPSHP attributes must be used in the following combinations:

1, 3, 1 (white, red, white), 1 (horizontal stripes) and 19 (square) for the right hand shore or 4, 1 (green, white), 1 (horizontal stripes) and 12 (rhombus (diamond)) for the left hand shore.

D) EU: For marks indicating danger points DAYMAR ('daymar')
COLOUR/ TOPSHP attributes must be used in the following combinations: 3 (red) and 2 (cone, point down) for the right hand shore or 4 (green) and 1 (cone, point up) for the left hand shore

E) EU: The designator as it appears on the 'bcnlat', if it can be read from a passing vessel, should be encoded in the attribute OBJNAM.

Administrative information on the buoys that is not relevant for navigation should be encoded in the attribute NOBJNM. It is not repeated for each slave object.

F) US: For daybeacons with more than one color, such as a crossing or non-laterally significant day beacon, use multiple COLOUR attributes and populate the COLPAT field based upon the color pattern of the day beacon. For example, a NR daybeacon would be encoded as COLOUR = 1,3 with TOPSHP = 12 (rhombus(diamond)), and COLPAT

O.3 Notice Marks

O.3.1 Notice Marks (M)

Waterway signs in accordance with the European Code for Inland Waterways of UN/ECE (http://www.unece.org/trans/doc/finaldocs/sc3/TRANS-SC3-115r2e.pdf).

Used also in Brazil in accordance with Normas da Autoridade Marítima para Auxílios à Navegação (NORMAM-17) - Diretoria de Hidrografia e Navegação (DHN) and for Waterway signs in the Russian Federation in accordance with Russian Inland Waterway Regulations GOST 26600-98.

For notice marks on bridges see O.3.2

Encoding Instructions

Object Encoding

Real World (Europe)

IENC Symbolization (CEVNI)

Real World (Brazil - two sides system)

A) For detailed list of all available input ID's for category of notice mark (catnmk) see annexes "AA - CEVNI", "AB - Russian Inland Waterways", "AC - Brazilian Two Sides System", "AD - Brazilian Side Independent System" and "AE - Brazilian Paraguay-Parana Waterway".

In Annex AA, all order numbers are referenced to the European Code for Inland Waterways – CEVNI, revision 2, edited by the Economic Commission for Europe of the United Nations.

- B) Although the list is originally based on CEVNI, the codes can be used for other notice marks with the same meaning (e.g., on the Paraguay-Parana Waterway in Brazil).
- C) For CEVNI: The function of the notice mark (fnctnm) has to be encoded for display purposes as follows: 1 (prohibition mark, CEVNI signs A), 2 (regulation mark, CEVNI signs B), 3 (restriction mark, CEVNI signs C), 4 (recommendation mark, CEVNI signs D), 5 (information mark, CEVNI signs E).
- For CEVNI: If the notice mark is positioned rectangular to the bank, it can be seen only by vessels heading upstream (dirimp = 1) or by vessels heading downstream (dirimp = 2).

If the notice mark is positioned parallel to the bank, it can be seen by vessels heading upstream as well as vessels heading downstream. In this case, the direction of impact is defined by triangular additional marks.

Object Encoding

Object Class = notmrk(P)

- (M) catnmk = Refer to Annexes AA, AB, AC, AD and AE

Real World (Brazil - one side system)

Real World (Paraguay-Parana (Brazilian))

- E) For CEVNI: The distance of impact (downstream or upstream, 'disipd' or 'disipu') can be defined by the distance between two notice marks, by a number, which is shown on the top board or by a number, which is shown on an triangular additional mark.
- F) For CEVNI: The minimum distance of impact from the notice mark rectangular to the bank (disbk1) can be defined by:
 - 1. the number on a sign C.5 (distance of the waterway from the bank).
 - 2. the first number on a sign E.5.2 (berthing permitted between two distances).
- G) For CEVNI: The maximum distance of impact from the notice mark rectangular to the bank (disbk2) can be defined by:
 - 3. the number on a sign A.5.1 (berthing prohibited within the breadth indicated).
 - 4. the number on a sign E.5.1 (berthing permitted within the distance indicated).
 - 5. the second number on a sign E.5.2 (berthing permitted between two distances).
- H) For CEVNI: Rectangular boards on top of the main sign ('addmrk' = 1) are showing the distance at which the regulation applies or the special feature indicated by the notice mark is to be found.

Rectangular boards at the bottom of the main sign ('addmrk' = 2) are showing explanations or additional information.

Triangular pointers at the side of the main sign ('addmrk' = 3 or 4) are showing the direction of the section to which the notice mark applies.

Triangular pointers at the bottom ('addmrk' = 5) are showing the distance from the shore, within which the regulation applies.

The attribute 'addmrk' is only defining the position and shape of the additional mark. The content is given by other attributes ('disipd', 'disipu', 'disbk1', 'disbk2', INFORM, NINFOM)

I) For CEVNI: If the system of

- (O) INFORM = (text of additional marks in English)
- (O) NINFOM = (Refer to Section B, General Guidance)
- (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)]
- (O) mmsico = [xxxxxxxxxx] (e.g., 366777490)
- (M) SCAMIN = [EU: 22000; US: 60000; BR: 50000]
- (C) SORDAT = [YYYYMMDD]
- (C) SORIND = (Refer to Section B, General Guidance)

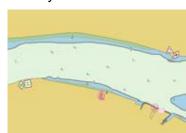

Real World

Chart Symbol

IENC Symbolization

- navigational marks of a special sign is different from the system mentioned in 'm_nsys', or there is no 'm_nsys' object class in the cell, the attribute 'marsys' must be used.
- J) For CEVNI: If a notice mark is illuminated, this should be indicated by the attribute STATUS = 12).
- K) For CEVNI: Explanations or additional information shown on additional marks and
 - 1. the number shown on the CEVNI signs B.6 (maximum speed limit) amended by the unit (e.g., "10 km/h"),
 - 2. the frequency band and the number shown on the CEVNI sign B.11 (mandatory radiophone channel) and E.23 (nautical radio information channel) (e.g., "VHF 11").
 - 3. the number shown on the CEVNI signs C.1 (restricted fairway depth), C.2 (restricted vertical clearance), C.3 (restricted width of the fairway or passage), and E.5.3 (maximum number of vessels berthing abreast) have to be indicated in the INFORM attribute.

If the sign E.5.3 is used as an additional mark, the text "maximum x vessels berthing abreast" should be used. The maximum number of vessels berthing abreast has to be indicated in arabic numbers.

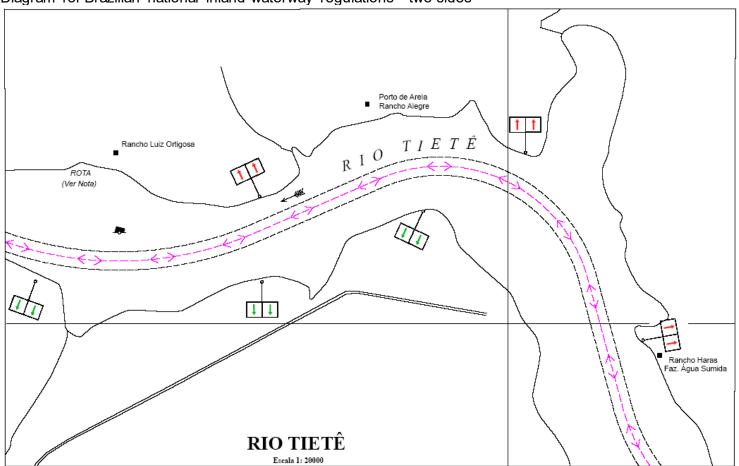

- L) For CEVNI: The standard SCAMIN value for notice marks is 25000.
 Different values can be used to improve the display with regard to the safety of navigation.
- M) For CEVNI: For more detailed information regarding Notice Marks and which makes should be accompanied by area features, see Section AA, Notice Marks for more detailed information.
- N) For CEVNI: To encode an area, where notice marks apply, objects such as 'resare', 'achare', 'trnbsn', CTNARE, 'comare', 'achbrt' or 'berths' must be associated using a collection object C ASSO.
- O) For CEVNI: Signs with textual description, which have the same meaning as a CEVNI sign (for example a white board with the text "mooring prohibited") can be encoded as notice marks with

INFORM = "textual description only".

- P) For CEVNI: Signs, which are installed by private companies, should be encoded with STATUS = 8 (private).
- Q) For CEVNI: If the chart producer wants to ensure that a notice mark is displayed correctly, if detailed symbolization is used instead of the generalized symbols, ORIENT has to be encoded.
- R) BR: The function of the notice mark (fnctnm) has to be encoded.
- S) BR: The attribute bnkwtw must be encoded for display purposes when adopting marsys = 13 (Brazilian national inland waterway regulations two sides) or marsys = 15 (Paraguay-Parana waterway Brazilian complementary aids). It indicates the board colours.
- T) BR: The attribute orientation (ORIENT) must be used to rotate the symbol according the orientation of the board for all Brazilian notice marks.
- U) BR: The direction of impact attribute (dirimp) must be used to define if the notice mark is addressed to vessels heading upstream or downstream.
- V) This feature could be aggregated to for example a lock, bridge, communication area, anchorage area, anchor berth, berth, turning basin by a C_AGGR object.

P - Fog Signals

P.1 Fog Signal

P.1.1 Fog Signal (M)

A fog signal transmits a warning signal from an aid to navigation, during periods of low visibility.

Graphics	Encoding Instructions	Object Encoding
Chart Symbol Obstn Obstn IENC Symbolization 9/Mittelrinne 2	 A) FOGSIG must be a slave object to PILPNT, 'boylat', BOYSPP, BOYCAR, BOYSAW, etc. B) The name of the navigational aid must be encoded in the attribute OBJNAM and possibly NOBJNM of the master object. It is not repeated for each slave object. C) The signal group is encoded using brackets to separate the individual groups. A group of signals may be a single number, a chain of numbers separated by "+", a sequence of up to 4 letters or a letter and a number. D) L in SIGSEQ stands for signal duration in xx.x seconds. E stands for duration of silence in xx.x seconds. 	Object Class = FOGSIG(P) (M) CATFOG = [1 (explosive), 2 (diaphone), 3 (siren), 4 (nautophone), 5 (reed), 6 (tyfon), 7 (bell), 8 (whistle), 9 (gong), 10 (horn)] (O) SIGFRQ = [xxxxxx] (Hz), e.g. 12 for 12 Hz (O) SIGGEN = [1 (automatically), 2 (by wave action)] (C) SIGPER = [xx.xx (e.g., signal period of 12 seconds coded as 12)] (C) SIGGRP = [(x),(x)], e.g., (), (2), (2+1) (C) SIGSEQ = [LL.L + (EE.E)] (seconds) (O) VALMXR = [xx.x] (M) SCAMIN = [EU: 22000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

Q - Radar, Radio, Electronic Positioning

Q.1 Radar

Q.1.1 Radar Station (O)

The radar station of a VTS or a lock to locate vessels and/or monitor the traffic.

Graphics	Encoding Instructions	Object Encoding
Chart Symbol Ra 22 Fig. 1 F	 A) The object radar station (RADSTA) is used to encode the technical equipment itself independent of the building or structure where it is installed. This building or structure, e.g., mast, tower, building, radar dome is a different object. B) The communication information of the VTS or lock to which the radar antenna belongs should be encoded by a 'comare' object (M.4.1). C) RADSTA has to be the slave object of the supporting structure (e.g., landmark, see F.3.1 or building single, see E.1.2). If both objects have the same name, it is only encoded in the master object. 	Object Class = RADSTA(P) (M) CATRAS = [1 (radar surveillance station)] (O) OBJNAM = (name and/or operator/owner) (O) NOBJNM = (Refer to Section B, General Guidance) (M) SCAMIN = [EU: 22000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

Q - Radar, Radio, Electronic Positioning

Q.2 Radio

Q.2.1 Radio Calling-in Point (M)

Also called radio reporting points, they have been established in certain busy waterways and port approaches to assist traffic control. On passing these points or crossing a defined line vessels are required to report on VHF to a Traffic Control Centre. (adapted from IHO Chart Specifications, M-4)

Graphics	Encoding Instructions	Object Encoding
Real World UKW 18	 A) If it's not a one-way route use TRAFIC = 4 two-way in general. Use inbound (upstream) and outbound (downstream), if the obligation to report applies only to one direction of traffic. B) The attribute ORIENT (orientation) is used to point in the direction of impact and enables to fix the pointer of the symbol C) COMCHA (communication channel) has to be used. The attribute "communication channel" encodes the various VHF-channels used for communication. Each VHF-channel should be indicated by 2 digits and up to 2 characters (A-Z); e.g., VHF-channel 7 -> 07', VHF-channel 16 -> >16'; The indication of several VHF-channels is possible. D) 'catcom' should always be used. E) The use of line objects crossing the waterway is preferred, but it is not allowed to encode two different 'rdocal' objects on the same spatial line geometry. F) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the TXTDSC attribute. G) A communication area should be 	Object Class = rdocal(P,L) (M) TRAFIC = [1 (inbound), 2 (outbound), 3 (one-way), 4 (two-way)] (M) ORIENT = [xxx.xx or "unknown"] (degree (°)), e.g., 110.76 (M) COMCHA = [[XXXX];[XXXX];] (M) catcom = [1 (VTS centre), 2 (VTS sector), 3 (IVS point), 4 (MIB), 5 (lock), 6 (bridge), 7 (custom), 8 (harbour)] (O) TXTDSC = (Refer to letter F) (M) OBJNAM = (name and/or operator/owner) (O) NOBJNM = (Refer to Section B, General Guidance) (C) unlocd = [ISRS Location Code] (M) SCAMIN = [EU: 12000; US: 22000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)
	G) A communication area should be	

encoded where relevant.

H)

This feature could be aggregated to

a lock, bridge or communication area, etc. by a C_AGGR object.

R.1 Check Points

R.1.1 Check Point (C)

An official place to register, declare, or check goods and/or people.

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	 A) Places for customs controls and immigration control have to be encoded as a 'chkpnt'. B) This object only encodes the function. The object 'checkpoint' does not include facilities such as buildings, gates, or other installations. They may be encoded as separate objects. C) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the TXTDSC attribute. D) If an UNLOCODE or an ISRS is available, it must be encoded (see General Guidance H). E) EU: Check points must be encoded. 	Object Encoding Object Class = chkpnt(P,A) (M) catchp = [1 (custom), 2 (border)] (M) NATION = (Nationality is encoded by a 2 character-code following ISO 3166 (refer to Annex A to S-57 Appendix A)) (O) OBJNAM = (name of the control station) (O) NOBJNM = (Refer to Section B, General Guidance) (C) unlocd = [ISRS Location Code] (O) TXTDSC = (Refer to letter C) (M) SCAMIN = [EU: 12000; US: 22000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

R.2 Signal Stations

R.2.1 Traffic Signal Station - Bridge Passage (O)

Place on shore from which signals are made for the control of vessels wishing to pass under a bridge.

Graphics **Encoding Instructions** Object Encoding Real World A) COMCHA should not be used. **Object Encoding** communication area can be given in Object Class = sistat(P) 'com are' object class. (M) catsit = [8 (bridge passage)] B) It's recommended to show the direction of the impact (object (O) dirimp = [1 (upstream), 2 (downstream)] attribute 'dirimp') if the traffic signal (C) OBJNAM = (name and/or operator/owner) station is only valid for one direction. (O) NINFOM = (Refer to Section B, General INFORM can be used to give D) Guidance) unformatted text as additional (O) TXTDSC = (Refer to letter D) information. For formatted text Real World TXTDSC has to be used. (C) unlocd = [ISRS Location Code] The signals have to be aggregated E) (O) CONDTN = [1 (under construction), 2 with the other bridge objects by (ruined), 3 (under reclamation), 5 (planned C AGGR. construction)] (M) SCAMIN = [EU: 22000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance) IENC Symbolization

R.2 Signal Stations

R.2.2 Traffic Signal Station - Lock (O)

Place on shore from which signals are made for the control of vessels entering or leaving a lock.

Graphics	Encoding Instructions	Object Encoding
Real World Real World Real World IENC Symbolization	A) COMCHA should not be used, communication area can be given in 'comare' object class. B) It's recommended to show the direction of the impact (object attribute 'dirimp') if the traffic signal station is only valid for one direction. C) If the traffic signal station has an official name it has to be encoded with the object attribute OBJNAM. D) INFORM can be used to give unformatted text as additional information. For formatted text TXTDSC must be used. E) The signals have to be aggregated with the other lock objects using C_AGGR.	Object Class = sistat(P) (M) catsit = [6 (lock)] (O) dirimp = [1 (upstream), 2 (downstream)] (C) OBJNAM = (Refer to letter C) (O) NOBJNM = (Refer to Section B, General Guidance) (O) INFORM = (Refer to Section B, General Guidance) (O) NINFOM = (Refer to Section B, General Guidance) (O) TXTDSC = (Refer to letter D) (C) unlocd = [ISRS Location Code] (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)] (M) SCAMIN = [EU: 22000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

R.2 Signal Stations

R.2.3 Traffic Signal Station - Oncoming Traffic Indicator (O)

Place on shore from which signals are made to inform about oncoming traffic.

Graphics	Encoding Instructions	Object Encoding
Real World IENC Symbolization	 A) COMCHA should not be used, communication area can be given in 'comare' object class. B) It's recommended to show the direction of the impact (object attribute 'dirimp') if the traffic signal station is only valid for one direction. C) If the traffic signal station has an official name it's has to be encoded with the object attribute OBJNAM. D) INFORM can be used to give unformatted text as additional information. For formatted text TXTDSC must be used. 	Object Class = sistat(P) (M) catsit = [10 (oncoming traffic indication)] (O) dirimp = [1 (upstream), 2 (downstream), 3 (to the left bank), 4 (to the right bank)] (C) OBJNAM = (Refer to letter C) (O) NOBJNM = (Refer to Section B, General Guidance) (O) INFORM = (Refer to letter D) (O) NINFOM = (Refer to Section B, General Guidance) (O) TXTDSC = (Refer to letter D) (C) unlocd = [ISRS Location Code] (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)] (M) SCAMIN = [EU: 22000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

R.2 Signal Stations

R.2.4 Traffic Signal Station - Port Entry and Departure (O)

Place on shore from which signals are made for the control of vessels entering or leaving a port.

Graphics	Encoding Instructions	Object Encoding
Real World Real World IENC Symbolization	A) COMCHA should not be used, communication area can be given in 'comare' object class. B) It's recommended to show the direction of the impact (object attribute 'dirimp') if the traffic signal station is only valid for one direction. C) If the traffic signal station has an official name it's has to be encoded with the object attribute OBJNAM. D) INFORM can be used to give unformatted text as additional information. For formatted text TXTDSC has to be used.	Object Class = sistat(P) (M) catsit = [2 (portentry and departure)] (O) dirimp = [1 (upstream), 2 (downstream), 3 (to the left bank), 4 (to the right bank)] (C) OBJNAM = (Refer to letter C) (O) NOBJNM = (Refer to Section B, General Guidance) (O) INFORM = (Refer to letter D) (O) NINFOM = (Refer to Section B, General Guidance) (O) TXTDSC = (Refer to letter D) (C) unlocd = [ISRS Location Code] (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)] (M) SCAMIN = [EU: 22000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

R.3 Coastguard and Rescue Stations

R.3.1 Rescue Station (O)

A place at which life saving equipment is held.

R.3 Coastguard and Rescue Stations

R.3.2 Coastguard Station (O)

Watch keeping stations at which a watch is kept either continuously, or at certain times only.

Graphics	Encoding Instructions	Object Encoding
Real World IENC Symbolization	A) If it is required to encode a coastguard station, it must be done using the feature Coastguard Station. B) The Coastguard Station must only be used to describe the function of the coastguard station, independent of the building or structure itself. If it is required to encode the building or structure in which the coastguard station operates, it must be done using an appropriate feature (e.g. Building, Landmark). C) Maritime Rescue and Coordination Centres (MRCC) are part of a constantly manned communications watch system. If it is required to encode a MRCC, it should be done using Coastguard Station, with complex attribute information (subattribute text) = Maritime Rescue and Coordination Centre. The name of the station may be populated using the complex attribute feature name (sub-attribute name), e.g. MRCC Swansea. D) Each VHF-channel should be indicated, using the attribute communication channel. E) A Rescue Station should be encoded using Rescue Station (see R.3.1). F) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the TXTDSC attribute. G) Use STATUS if any of the conditions apply.	Object Class = CGUSTA(P) (M) COMCHA = [[XXXX];[XXXX];] (O) OBJNAM = [Name] (O) NOBJNM = (Refer to Section B, General Guidance) (O) STATUS = [2 (occasional), 4 (not in use)] (O) INFORM = (additional information) (O) NINFOM = (Refer to Section B, General Guidance) (M) SCAMIN = [8000] (O) TXTDSC = (additional information) (O) NTXTDS = (Refer to Section B, General Guidance) (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

R.4 Sensors

R.4.1 Sensor (O)

A device that responds to a physical stimulus (as heat, light, sound, pressure, magnetism or a particular motion) and transmits a resulting impulse (as for measurement or operating a control).

Graphics	Encoding Instructions	Object Encoding
Real World	A) For a sensor used to reduce or to turn off bridge lighting, choose appropriate category of sensor and fnctsn = 1 (reduce bridge lighting).	Object Encoding Object Class = sensor(P) (M) catsen = [1 (light activated), 2 (telephone activated)] (M) fnctsn = [1 (reduce bridge lighting)] (O) OBJNAM = [name and/or operator/owner] (O) NOBJNM = (Refer to Section B, General Guidance) (M) SCAMIN = [22000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

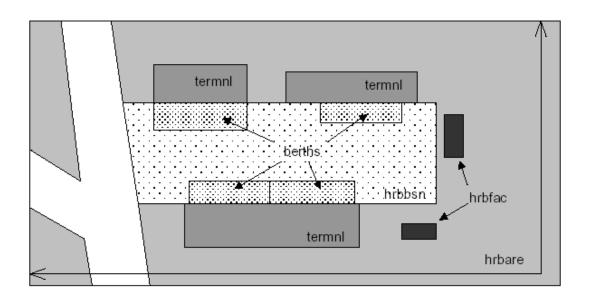

S - Small Craft Facilities

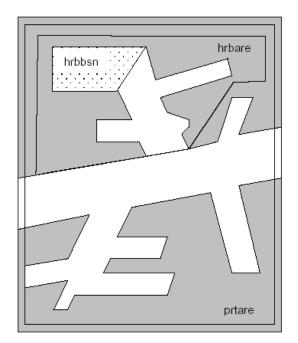

S.1 Marinas and Other Facilities

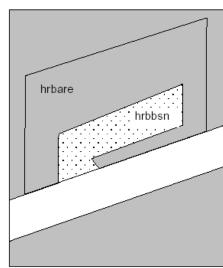

S.1.1 Harbor Facilities (O)

A harbor installation with a service or commercial operation of public interest.

Graphics **Encoding Instructions** Object Encoding Real World A) Harbor facilities indicate only the **Object Encoding** services and not the physical Object Class = hrbfac(P,A) buildings or other structures. (M) cathaf = [4 (fishing harbour), 6 (naval B) Terminals are not encoded as base), 9 (shipyard), 12 (syncrolift), 13 'hrbfac' but as 'termnl' (see G.3.19). (straddle carrier), 16 (service and repair), 17 C) A shipyard on shore is always (quarantine station)] encoded as hrbfac with cathaf = 9. (O) TXTDSC = (Refer to letter E) The single slipways are encoded as SLCONS (see G.3.18). For docks (O) CONDTN = [1 (under construction), 2 see G.3.5 to G.3.7. (ruined), 3 (under reclamation), 5 (planned IENC Symbolization construction)] If the harbour facility has a special D) time schedule or special operating (M) SCAMIN = [EU: 12000; US: 22000] hours apply, the object can be (C) SORDAT = [YYYYMMDD] combined with a time schedule. For this purpose please refer to the time (C) SORIND = (Refer to Section B, General schedule (general) object 'tisdge' Guidance) see T.1.1. E) If a structured external XML-file with more detailed communication information is available, the reference to the file must be entered in the TXTDSC attribute. Harbor master's offices, pilot F) offices, water police offices and custom offices are encoded as **BUISGL**

S - Small Craft Facilities

S.1 Marinas and Other Facilities

S.1.2 Marina (O)

A harbour installation with a service or commercial operation of public interest. (S-57 Standard)

Graphics	Encoding Instructions	Object Encoding
Real World Chart Symbol Image to be included at a later date IENC Symbolization	A) Only code HRBFAC (A) object when extents of marina feature are known. Use HRBFAC (P) when extents are not known.	Object Class = HRBFAC(P,A) (M) CATHAF = [5 (yacht harbour/marina)] (M) OBJNAM = [(Marina Name) + "Marina"] (O) NOBJNM = (Refer to Section B, General Guidance) (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)] (M) SCAMIN = [EU: 12000; US: 60000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

S - Small Craft Facilities

S.1 Marinas and Other Facilities

S.1.3 Small Craft Facility (O)

A place at which a service generally of interest to small craft or pleasure boats is available.

Graphics	Encoding Instructions	Object Encoding
IENC Symbolization	 A) This object class encodes only the service available for small craft or pleasure boats at this location. B) The structure housing the service may be encoded separately. C) If the small craft facility has a special time schedule or special operating hours apply, the object can be combined with a time schedule. For this purpose please refer to the time schedule (general) object 'tisdge' see T.1.1 D) For bunker, fuel and water supply for commercial vessels see G.3.2, for refuse dump see G.3.17. E) If a structured external XML-file with more detailed communication information is available, the reference to the file has to be entered in the TXTDSC attribute. 	Object Class = SMCFAC(P,A) (M) CATSCF = [1 (visitor's berth), 2 (nautical club), 3 (boat hoist), 4 (sailmaker), 5 (boatyard), 6 (public inn), 7 (restaurant), 8 (chandler), 9 (provisions), 10 (doctor), 11 (pharmacy), 12 (water tap), 13 (fuel station), 14 (electricity), 15 (bottle gas), 16 (showers), 17 (launderette), 18 (public toilets), 19 (post box), 20 (public telephone), 21 (refuse bin), 22 (car park), 23 (parking for boats and trailers), 24 (caravan site), 25 (camping site), 26 (sewerage pump-out station), 27 (emergency telephone), 28 (landing/launching place for boats), 29 (visitors mooring), 30 (scrubbing berth), 31 (picnic area), 32 (mechanics workshop), 33 (guard and/or security service)] (O) OBJNAM = (name and/or operator/owner) (O) NOBJNM = (Refer to Section B, General Guidance) (O) TXTDSC = (Refer to letter E) (O) CONDTN = [1 (under construction), 2 (ruined), 3 (under reclamation), 5 (planned construction)] (M) SCAMIN = [EU: 8000; US: 12000] (C) SORDAT = [YYYYMMDD] (C) SORIND = (Refer to Section B, General Guidance)

T - Time and Behaviour

T.1 Schedules

T.1.1 Time Schedule (general) (C)

Time schedules are used to encode operating hours of locks, bridges etc.

Graphics

Encoding Instructions

Object Encoding

Real World

IENC Symbolization

- A) Encoded without dedicated spatial reference. Always associated with respective geo object (see below).
- B) Operating hours should be included in at least all movable bridges and all locks, even if these are operated 24 hours a day 7 days a week all year round.
- C) Operating hours should preferably be added for all other objects that have limited operating/ availability hours (Offices of waterway authorities, harbor masters, police, etc. / bunker services, fresh water supplies, refuse dumps, etc. / terminals, berths, pontoons, etc.)
- D) Detailed schedule information is contained in external file. The attribute 'schref' contains the respective reference.
- E) If there are different time schedules for different ship types or usages of ships, or there are different categories of time and behavior, several 'tisdge' objects must be used.
- F) Information about average passing times is encoded in an additional external file. The file name is encoded in the 'aptref' attribute
- G) Operating times have to be encoded in local time.
- H) EU: Time schedules must be encoded, however if the same time schedule applies to all kinds of vessels the reference to the external XML file can be encoded in the TXTDSC attribute of the object itself. It is not necessary to encode the tisdge object in this case.

Object Encoding

Object Class = tisdge()

- (M) cattab = [1 (operational period), 2 (nonoperational period)]
- (M) schref = (Time schedule reference: if a structured external XML-file is available, the reference to the file has to be entered here.)
- (M) shptyp = [1 (general cargo vessel), 2 (container vessel), 3 (tanker), 4 (sailing vessel), 5 (fishing vessel)]
- (M) useshp = [1 (linertrade), 2 (occasional professional shipping), 3 (leisure)]
- (O) aptref = Average passing time reference; if a structured external XLM-file is available, the reference to the files has to be entered here!
- (O) dirimp = [1 (upstream), 2 (downstream), 3 (to the left bank), 4 (to the right bank)]
- (C) SORDAT = [YYYYMMDD]
- (C) SORIND = (Refer to Section B, General Guidance)

U - Legal ECDIS
